Deleting a printer ..............................................................................................5-17
1 Introduction

This guide consolidates the install instructions for Xerox Document Submission (XDS) plus the drivers, and Xerox Document Submission Plus (XDS Plus) into one document. Generic printing information and job ticket feature information are found in additional guides.

Before you use this guide

This guide is intended for users of workstations using an Internet Explorer 5.x or higher web browser and a Windows operating system, Macintosh, or Solaris workstation.

You should be familiar with using a web browser.

About this guide

Before you perform any procedures in this guide, become familiar with its contents and conventions.

Conventions

This guide includes the following conventions:

• Angle brackets: Variable information that is displayed on your window or that can be entered as part of a command line is enclosed within angle brackets. Examples include "Unable to copy <filename>;" "set –p <printer>.”

• Square brackets: Square brackets are used for the following:
  – Names of menu options that you select; for example, [Printer Default]
  – Names of buttons that you select; for example, [OK] and [Cancel]
Names of text boxes, list boxes, and fields; for example, "the [From] text box," "the [Directories] list box," "the [Color Source] field"

• Bold: Boldface type is used for the following:
  – Directory paths; for example, “Browse to the Win_nt40/Xeroxdrv directory.”
  – Text that you enter; for example, "Enter purple or XDS."
  – Calling attention to text that is particularly important; for example, “Select [Stop] on the user interface window. Do not press the red stop button on the controller.”
  – Introductory words or phrases that begin items in a list; for example,
    Hold job: The document is held at the printer...
    Cancel job: The document is not printed...

• Note: Notes are hints that help you perform a task or understand the text. Notes are presented in italics, in separate paragraphs. Example:
  NOTE: You cannot submit a job unless the printer is connected to your workstation.

Related documentation

Further information on the specific Xerox printer and the print server or controller that is part of your printing system may be obtained by referring to the documentation that was delivered with the elements of the system.

Customer Support

To place a customer service call, dial the direct TTY number for assistance. The number is 800-735-2988.
2 Using the DocuSP web interface

This chapter contains the procedures for accessing the DocuSP web interface on your workstation. With the web interface, you use a browser to access windows that enable you to select a document file, set up a job ticket, and submit your print job to the printer.

Prerequisites

You must satisfy the following prerequisites to use the web interface for job submission:

- Microsoft Windows software must be installed on your workstation. If Windows is installed as a shared copy on your network server, contact your System Administrator.
- A printer with a controller running DocuSP 3.X must be connected to your workstation.
- Have Internet Explorer 6 or Netscape 6.2.
- Have Internet Explorer 5.5 or higher web browser installed on your workstation with Service Pack 2.
- Know how to use the tools in Windows or Solaris to connect to the network disk drives or to disconnect from the drives to which you are currently connected.
- Know how to access and use your web browser to navigate on the Internet.
- Know how to save your document as a PDL format file by using the print-to-file method; or know how to create a valid TIFF, PDF, or ASCII file.

Accessing the web interface software

To access the web-based web interface using your Internet browser, follow these steps:
1. Ensure that the printer controller to which you want to send jobs is powered on.

2. On your workstation, open your Internet browser (Internet Explorer or Netscape).

3. Enter http:// followed by the IP address of your printer in the form xx.xxx.xxx.xxx. Your printer home page is displayed.

Your printer home page contains the following fields:

- **Job Submission button**: Connects you to the job setup window for the web interface.

- **Job Submission Applet button**: Connects you to the XDS Job Submission Applet software, which enables you to set up and print jobs using XDS Plus on the Internet without installing it on your workstation.

   **NOTE**: If you are unable to connect to the web interface, try the following:

   a. Select the [Refresh] button on your browser window.

   b. If you are unable to display the web interface printer home page, reboot the printer controller, then return the login level to Walk-Up User.

4. On the printer home page, select [Job Submission]. The Job Submission window opens, displaying job setup and printing options.

   For the procedure to print a document using the web interface, refer to information about printing a document in the “Guide to Printing Using Xerox Production Print Services,” guide.

**Exiting the web interface software**

To exit the web interface software you may do one of the following:

- Select the [X] button in the upper-right corner of the Internet browser window to close the browser window.

- Enter a different web address in the browser address field and press <Return> or <Enter>.
3 Installation and configuration for Macintosh

This chapter contains the information you need to install the Xerox Document Submission (XDS) application, the Xerox PlugIn, and the PPD files for use with third party printer drivers for a Macintosh workstation. This software enables users of Xerox supported networks to take advantage of the many printing options that are offered by the supported Xerox printing systems.

The procedures in this section assume that the user is familiar with basic Macintosh activities, such as copy and delete, and is also familiar with setting up printers on the Macintosh. See your system or network administrator for assistance.

The Adobe License agreement

You must agree to the Adobe license and registration conditions before installing the AdobePS printer driver. The Macintosh installation displays the license and requests your agreement before proceeding.

The Adobe Acrobat Reader software may be obtained from Adobe at the Adobe WEB site: http://www.adobe.com

Installing and configuring the AdobePS driver

This section describes the procedures for installation and configuration of the AdobePS PostScript print driver, Xerox PPD files, and Xerox PlugIn using the CD ROM that is supplied with your printer.

To install the PPDs or drivers from the web, access the following web site using an internet connection:
Driver Support

The following drivers are supported for the Macintosh:
- AdobePS Native with PPD
- AdobePS Native with PPD and Xerox PlugIn

Workstation requirements

The workstation must meet the following hardware and software requirements:

Hardware requirements

- A Macintosh Power PC
- 4 MB or more memory
- 1.5 MB for the XDS application
- 500 KB disk space for each PPD and PlugIn to be installed
- 2.1 MB disk space for the AdobePS printer driver

Software requirements

- Mac OS 8.6 through 9.x, or Mac OS X 10.1 or higher in Classic mode
- For further information on software requirements based on your workstation platform, read the “ReadMe” file that is located on the CD ROM. The “ReadMe” document is located in the AdobePS 8.7 folder, which is in the AdobePS Driver folder.

Installing the AdobePS driver

Before installing this version of the AdobePS printer driver and any of the Xerox PPDs or the PlugIn, remove any old Adobe drivers, Xerox PPDs, and Xerox printer Plugin from the Printer Descriptions folder in the Extensions folder. Delete the "Xerox Printer Preferences" file from the Preferences folder, then complete the following steps to install the Adobe PS driver.
1. Insert the CD ROM labeled Xerox Production Print Services (XPPS) 3.7x Software into the CD ROM drive of the Macintosh.

2. Double-click the CD icon to open it.

3. Open the OS9 folder.

4. Open the Adobe PS Driver folder.

5. Open the AdobePS folder.

7. On the Adobe PostScript Driver screen, select [Continue...].

9. Select [Install] to perform the easy install. The AdobePS driver is installed.

10. Select [Continue] if you want to install additional drivers.

11. When the installation is complete, select [Restart] to restart the Macintosh workstation or select [Quit] to exit the installation program.

**Installing the PPD files into a Macintosh OS X environment**

Xerox PostScript Printer Description (PPD) files must be installed for every printer model that you want to use. An appropriate Xerox PPD is necessary in order to send jobs to the printer using the AdobePS printer driver. Follow this procedure to install the PPDs:

**NOTE:** You must have administrative rights to place the PPDs in the necessary directory.

1. Insert the CD ROM labeled Xerox Production Print Services (XPPS) 3.7x Software into the CD ROM drive of the Macintosh.

2. Double-click the CD icon to open it.

3. Open the OS9 folder.

4. Open the ppds folder.

5. On the hard drive, open the Library folder.

6. Open the Printers folder.

7. Open the PPDs folder.

8. Select the Xerox PPDs that match the printers that you are installing from the PPDs folder on the CD.
9. Drag the selected icons to the PPDs folder.
10. The PPDs are installed and ready to be set up using the Print Center.

**PPD setup using Print Center**

Once you have completed the previous instructions for installing the PPDs, perform the following instructions:

1. Double-click on the hard drive icon.
2. In the open window, select the applications button in the toolbar.
3. Open Applications, and select the Utilities folder.
4. Select the Print Center icon.
5. Select [Add Printer...]
6. Select the type of protocol (AppleTalk, etc).
7. Select the correct zone.
8. Choose the printer you wish to set up.
9. Select the printer model (Choose the PPD for your printer).
10. Select [Add].
11. Close the Print Center.

**Installing the Xerox PlugIn**

The Xerox Job Ticket PlugIn is not necessary in order to print to a Xerox printer. However, in order to utilize the full feature set of the selected Xerox printer, you must install the Xerox PlugIn.

1. Insert the CD ROM labeled Xerox Production Print Services (XPPS) 3.7x Software into the CD ROM drive of the Macintosh.
2. Double-click the CD icon to open it.
3. Open the OS9 folder.
4. On the hard drive, open the System Folder (ensure that you open the folder titled “System Folder” and not the one titled “System”).
5. Open the Extensions folder.
6. Open the Printer Descriptions folder.
7. From the OS 9 folder, open the AdobePS PlugIn folder.
8. Select the Xerox Job Ticket PlugIn and drag the icon to the Printer Descriptions folder.

9. If prompted to replace an older version, select [Ok].

10. Use the Desktop Printer Utility to set up and configure the printers. Refer to “Configuring the printers,” later in this chapter.

**Configuring the printers**

After installing the AdobePS driver, PPDs, and PlugIn, you need to set up and configure the printers for your applications and XDS.

1. In your workstation hard disk directory, open the Adobe PS Components folder.

2. Open the Desktop Printer Utility. The New Desktop Printer dialog box is displayed.

   If the Desktop Printer Utility does not open to a new printer dialog box, select [New] from the File pull-down menu on the workstation menu bar.

3. From the With pull-down menu, select [AdobePS].

4. In the Create Desktop area, select either [Printer (AppleTalk)] or [Printer (LPR)], depending on which protocol your network is using. Select [OK].

5. In the [PostScript Printer Description (PPD) File] field, select [Change].

6. Scroll to the bottom of the printer list, and select the appropriate Xerox printer that you want to install.

7. Select [Select].

8. **For AppleTalk, follow these steps:**

   b. Select the AppleTalk zone.

   c. Select a PostScript printer from the displayed list of available printers, then select [OK].

   d. Select [Create].

   e. If you want to rename the printer, enter the new name in the [Name] field in the save dialog box that is displayed.

   f. Select [Desktop] to create the new printer on the desktop, enter the printer name and select [Save].
For LPR, follow these steps:

a. Select [Change] in the printer Selection field.

b. Enter the address of the printer, either as an IP address or as a fully qualified URL.

c. Enter the name of the desired printer queue in the [Queue] field.

d. Select [Verify] to verify the network connection to the printer, then select [OK].

e. Select [Create].

f. If you want to rename the printer, enter the new name in the [Name] field in the save dialog box that is displayed.

g. Select [Desktop] to create the new printer icon on the desktop, enter the printer name and select [Save].

Installing and configuring XDS on Macintosh

This section explains how to install the Xerox Document Submission (XDS) application, using the CD ROM that is supplied with your printing system product.

To install the XDS software from the web, access the following web site using an internet connection:

http://www.xerox.com

Select [Drivers], and locate the file appropriate for your workstation type and printer model.

Workstation requirements

Your workstation must meet the following hardware and software requirements:

Hardware requirements

- A Macintosh Power PC
- 1.5 MB disk space for XDS
Software requirements

- Mac OS 8.6 through 9.x or Mac OS X version 10.1 and higher in Classic mode.
- AdobePS printer driver installed

Installing the XDS software

To install the XDS software, perform the following steps:

1. Delete any existing Xerox Document Submission client software by selecting the icon, then dragging it to the trash can icon.
2. Delete the “Xerox Printer Preferences” file from the Preferences folder.
3. To begin the installation process, do one of the following:
   - Access the XPPS version 3.7x software from CD ROM:
     a. Insert the CD ROM labeled Xerox Production Print Services (XPPS) 3.7x Software into the CD ROM drive of the Macintosh. The XPPS CD icon appears on your workstation screen.
     b. Double-click the CD icon to open it.
     c. Open the OS9 folder.
     d. Open the XDS 3.7x folder.
     e. Drag the XDS3.7x icon from the XDS folder to the desired location on your workstation, then release it.
     f. Close all of the windows that are open from the XPPS CD. Drag the CD icon to the trash can icon, then release it. The CD is ejected.
   - Download the XPPS version 3.7x software from the internet.
     b. In the [Search] text box at the top of the Xerox home page, enter XPPS and select [Search].
     c. On the search results list, select the item containing XPPS software version 3.7x for Macintosh. The XPPS software is downloaded to your desktop.
     d. Open the xpps_for_mac Folder.
e. Open the XDS folder.

4. Double-click the [XDS] 3.7x icon to open it.

5. Select [OK]. The Document Submission window opens.

6. Use the Desktop Printer Utility to configure the printers for the application prior to submitting a document. Refer to “Configuring the printers,” earlier in this chapter, and your Macintosh documentation for the procedures.

**NOTE:** In order to configure the printers and to print documents using XDS, you need to install the AdobePS 8.7.3 printer driver. Refer to “Installing and configuring the AdobePS driver,” earlier in this chapter.

---

**Installing additional products**

After you have installed the XDS software, you may select another product configuration if you have additional supported Xerox printers to which you will send jobs for printing.

1. Open the XDS icon.

2. From the XDS Splash screen, select [OK].

3. From the Options pull-down menu on your workstation menu bar, select [Product Configuration].

4. Select the check boxes for the additional products that will be used, then select [OK].

---

**Ejecting the cd**

After you have completed installation, drag the CD icon to the trash can icon on the desktop. Release the icon. The cd is ejected.
4 Installation and configuration for Windows

This chapter contains the information that you need to install the Xerox Document Submission (XDS) application, the Xerox PostScript and PCL5e printer drivers, and the PPD or INF files for use with third party printer drivers. This software enables users of Xerox supported networks to take advantage of the many printing options that are offered by the Xerox printing systems.

NOTE: Ensure that you are logged on as the Administrator and not the Power User when using Windows NT. If you are logged on as the Power User during install, the install will produce an error message at the end of the install. The installation is trying to delete and update a file, but a Power User does not have access for certain types of files.

The Adobe license agreement

You must agree to the Adobe license and registration conditions before installing the Xerox Adobe PostScript printer driver. The Windows Client Installation program displays the license and requests your agreement before proceeding.

You may obtain the Adobe Acrobat Reader software from the Adobe WEB site at the following address: http://www.adobe.com

Workstation requirements

Your workstation must meet the following hardware and software requirements:
Hardware requirements

- 400 MHz or higher CPU
- Hard disk drive:
  - Windows 9x/Millennium: 15 MB
  - Windows 95: 128 MB
  - Windows NT 4.0/2000/XP: 20 MB
- CD ROM or Internet access

Software requirements

XPPS can be installed on the following Microsoft Operating Systems:

- Microsoft Windows 95
- Windows 98
- Windows Millennium
- Windows NT 4.0
- Windows 2000
- Windows XP

**NOTE:** The following software requirements are needed only if you intend to submit jobs using LPR from Windows 9x:

- A Winsock compliant TCP/IP protocol stack. The TCP/IP software must support access to lpr printing services, and it must support redirection of the windows printing port (LPT).

  If you use PathWay Access as the TCP/IP protocol stack, you must create a file named SERVICES in the C:\PATHWAY directory, if one does not already exist. This file must contain the following line:

  515/tcpspooler

**NOTE:** The following software requirements are needed only if you intend to submit jobs using Novell NetWare:

- Novell NetWare 3.11 or higher

If software has previously been downloaded from the internet, the following should be completed prior to running the new xpps_for_win.exe:
Delete the old directory (c:\xpps_cd_ pr to keep the old directory on the PC and rename the old directory (xpps_cd_3.x).

**Driver support**

The various types of drivers provide different levels of support for the Xerox printers. The choice of drivers depends upon the type of printing (PostScript or PCL) and the work flow of your environment.

The following table summarizes the driver support for various platforms.

**Table 4-1. Driver support by platform**

<table>

</table>

**NOTE:** The Xerox custom drivers do not support terminal servers.

**LPR Requirements**

If you will be submitting jobs using LPR from Windows 9x, or your network uses TCP/IP, note your requirements in the following sections.

**Using LPR with Windows 9x**

If you will be submitting jobs using LPR from Windows 9x, note these requirements:

- Novell Netware 3.11 or higher is required if you intend to submit jobs using Novell NetWare
• A Winsock compliant

**Using the LPR gateway**

If your network uses TCP/IP, you print through the LPR gateway.

Occasionally, large jobs, jobs containing a large number of graphics, or jobs that are printed on busy networks may cause the LPR connection to time out. If a time-out occurs, you may increase the LPR time-out values at the Windows workstation in order to allow these jobs to print. Set the default time-out values (in seconds) in the XDOCSUB.INI file, as follows:

1. Locate the XDOCSUB.INI file on your workstation.
   - For Windows 95/98, this file should be in the `c:\windows` directory.
   - For Windows NT/2000, this file should be in the `c:\WINNT` directory.
2. Use a text editor to add the following section and keyword value pairs to the XDOCSUB.INI file:

   ```ini
   [LPR Options]
   OpenPrintTimeOut=25
   ClosePrintTimeOut=20
   SendPrintTimeOut=20
   RecvPrintTimeOut=20
   OpenVerifyTimeOut=15
   CloseVerifyTimeOut=5
   SendVerifyTimeOut=10
   RecvVerifyTimeOut=15
   ```
3. Save and close the XDOCSUB.INI file.

**Removing previous versions**

Before you install or upgrade any XPPS components, remove any old versions that are installed, and restart your computer. Use the instructions in this section to do so.

**NOTE:** *If you are upgrading the Windows NT 4.0 custom Xerox PostScript driver, it is recommended that all older versions of the driver be deleted prior to performing the upgrade.*
NOTE: No uninstallation option is available for Windows 2000.

The upgrade process does not overwrite your job ticket (*.XJT) files or the XDOCSUB.INI file, which contains the user preference settings and the Windows XDS printer assignments.

If previous versions of XDS and/or drivers have been loaded, it is recommended that you uninstall the old version before installing the new one. Uninstalling XDS and the custom drivers does not remove any native PS drivers that have been installed from a PPD.

Uninstalling XPPS

To uninstall XPPS, do the following:

1. Close all applications, and restart the workstation to avoid initialization and General Protection Fault error messages.

2. Insert the Xerox Production Print Services (XPPS) version 3.7x software CD ROM in the CD ROM drive of your PC.

3. On the Choose Language screen, select a language in which the XPPS screens will be displayed.

4. On the About XPPS screen, select [Main Menu].

5. From the Main Menu, select [Uninstall XPPS] to uninstall the Xerox Document Submission Client (XDS) and Xerox PostScript and PCL printer drivers.

6. On the Uninstall screen, select [Continue with uninstall].

7. On the Choose Setup Language window, select the language for the uninstallation script, then select [OK].

8. On the next window, select [Next].

9. Read the usage agreement and disclaimer, then select [Yes].

10. The next window displays a list of XPPS files that will be deleted by the uninstallation process. Select [Next].

11. On the Proceed with Uninstall? prompt window, select [Yes]. The XPPS files are deleted.

12. The next window displays the number of files that were deleted. Select [OK].

13. On the next window, select [Yes, I want to restart my computer now], then select [Finish].
Removing NT 4.0 and other drivers

To remove the current NT 4.0 Custom Xerox PS driver or any other driver that could not be uninstalled using the procedure that is described in the previous section, perform the following:

1. From the Windows Start pop-up menu, select [Settings], then [Control Panel].
2. On the Control Panel window, open the [Printers] icon.
3. On the Printers window, select and delete the printer icon.

Installing XPPS on Windows 95, 98, and Millennium systems

CAUTION: The printer preferences may be lost when installing the XDS 3.7x software.

The Xerox Document Submission software (XDS) is a standalone application that is used to enter job ticket information for an existing PDL file. The Xerox printer drivers are used by Windows applications to program Xerox job ticket information and create a PDL output for either PostScript or PCL5e. Printer drivers have not been designed to support terminal servers.

This section details the instructions for the Xerox Document Submission software and the various drivers available for printing to the Xerox printers from a Windows 95, 98, or Millennium (ME) system.

NOTE: Each Xerox printer provides different printer language support. Some provide PS only, some PCL only, some both. Choose the driver that will provide the most support for the applications and Xerox printer you are using.

Installing Xerox Document Submission (XDS) and Xerox printer drivers

This section explains how to install the Xerox Document Submission (XDS) application and the Xerox custom PostScript and PCL printer drivers for Windows 95, 98, and ME platforms.

Perform the following steps:
1. Close all applications, remove any drivers that will be replaced, and restart the workstation to avoid initialization and General Protection Fault error messages.

2. Insert the Xerox Production Print Services (XPPS) version 3.7x software CD-ROM into the CD-ROM drive of your PC.

3. Select a language in which the XPPS screens will display.

4. On the About XPPS window, select [Main Menu].

5. Select [XPPS].
   
   **NOTE:** The installation program will automatically detect which version of Windows is available.

6. Select [Install Xerox Printer Drivers and XDS].

7. Select the appropriate language and then select [Ok].

8. At the Welcome screen, select [Next].

9. Select a Setup Type (Typical, Compact, or Custom). A Typical setup is recommended. Select [Next].

10. By default, the [Xerox Document Submission (XDS) for Windows] option is selected. At least one selection in the right hand window must be made otherwise XDS will not work properly. In the right hand window, select only the components you will be using from your workstation.

    - [DocuPrint] for DocuPrint NPS/IPS printers
    - [DocuSP] for DocuTech 61xx, DocuPrint EPS Printers, DocuTech 65/75/90, and DocuPrint 65/75/90
    - [DT Server] for DocuTech 135 or 90 with Network Server or NS Plus Server Series
    - [DocuColor] for DocuColor 20XX, 6060, and iGen3

    In the left-hand window, select the additional driver components. For each selection, the right hand window will display the supported printers for which drivers are available. Select all the printers that are being installed.

11. Select [Next].

12. Read and accept the Adobe End User License Agreement by selecting [Yes].

13. Assign a port to each selected printer. Select [Next]. If you are installing several printers, you may have more than one port assignment screen.

14. Confirm the settings and select [Next].

15. Select to restart the workstation and select [Finish].
16. If you would like to view the Readme file, select [Finish]; otherwise deselect “Yes, I want to view the README file” and select [Finish].

CAUTION: Do not rename the printers when installing XDS and the Xerox print drivers. If a printer is renamed, the job ticket settings will be lost when printing with the Xerox customized PostScript driver.

If you wish to rename a printer, it must be renamed immediately after the printer is installed (before printing or viewing printer properties).

Installing Adobe PS printer driver with Xerox PPD files

This section describes the procedures for installing a Xerox PPD file for use with the Adobe PostScript driver.

NOTE: If you are prompted for the PSCRIPT.DLL file during the installation of the Xerox PostScript drivers, check the hard drive for the file. If not found, you may need the Windows CD to locate the file.

NOTE: You will need to either set up the printer port prior to installing the PPD files using Add Printer in [Settings: Printers] or, after the installation is complete, configure the port.

NOTE: Using the Adobe PS driver with a Xerox PPD file does not provide access to the full feature set of the printer and does not access the Xerox Job Ticket.

1. Insert the Xerox Production Print Services (XPPS) version 3.7x software CD ROM in the CD ROM drive on your PC. The installation program starts automatically. Depending on your system, this may take a few seconds.

2. On the Choose Language screen, select a language in which the XPPS screens will be displayed.

3. On the About XPPS screen, select [Main Menu].

4. From the Main Menu, select [Install XPPS].

   NOTE: The installation program automatically detects which version of Windows is available.

5. From the installation menu, select [Install Adobe PS Printer Drivers].

6. Read the instructions on the screen and note the directory location of the Xerox PPD file, then select [Continue with Install].
7. On the Welcome screen, select [Next].
8. Read and accept the Adobe End User License Agreement by selecting [ACCEPT].
9. On the Printer Connection Type window, select the type of printer connection: Local Printer or a Network Printer, then select [Next]. The system may request additional configuration information, depending on which option you select.
10. On the Local Port Selection window, select the port to which the printer is attached.
    Either select the already configured port or select an Ipt port.
11. On the Local Port Selection window, select [Next].
12. On the Select Printer Model window, select [Browse] and locate the following directory on the CD drive (the location that you were instructed to note in step 6).
    `AdobePs\Win_9x_Millennium\ADOBEPS\Enu\PPDs`
    **NOTE:** The “Enu” folder name stands for United States English. If you selected a different language from the Choose Language screen, a different name appears in this position, representing the language that you chose.
13. From the PPDs directory, select the printer that you want to install, then select [OK].
    Ensure that you select the correct printer. Many printer names are similar in naming, but are completely different printers. Such as 180 EPS and the 180 NPS. Verify you select the correct one when making a choice.
    **NOTE:** The PPDs that are designated as Kanji are designed to support only installations that use Kanji character and font sets.
14. On the Select Printer Model window, select [Next].
15. On the Printer Information window, enter the following information, then select [Next]:
    - Enter a name that identifies the printer.
    - Specify if the printer will be the default printer for all applications.
    - Select the button for printing a test page.
16. On the Setup Information window, confirm the settings, then select [Install].
17. After the installation procedure has copied the files, the Printer Configuration window opens, asking if you would like to configure the printer now. Leave the settings as they are by selecting [No], then select [Next].

18. On the Setup Complete window, select the check box if you would like to view the Readme file, then select [Finish].

19. Select [Back] to continue with installation of additional printer drivers, or select [Exit] to end the installation program.

**NOTE:** If a problem occurs after you have installed the Adobe PS printer driver, you may need to remove the following files, located in the Windows NT printer drivers directory:

- `XCOMCODE.DLL`
- `XUMPDRV.R.DLL`
- `XPSCCKM.DLL`
- `XPSCUI.DLL`

**NOTE:** If you selected the lpt port during install, select the printer, then select [Properties: Ports] and select [Add Port]. Enter the Name or the IP address of the printer and the name of the print queue.

### Installing XPPS on Windows NT, 2000 and XP systems

This section details the installation instructions for the Xerox Document Submission software and the various drivers available for printing to Xerox printers from a Windows NT 4.0, Windows 2000, or Windows XP workstation.

**NOTE:** The various types of drivers provide different levels of support for the Xerox printers. The choice of a driver depends on the type of printing (PostScript or PCL) and the work flow of your environment.

**NOTE:** In order to install XDS or drivers on Windows NT, you must be logged on to the system with Administrative rights.

**NOTE:** In order to install XDS or drivers on Windows 2000, you must be logged on to the system with Power User or higher rights.
Installing the Xerox Document Submission (XDS) software

This section explains the procedure for installing the Xerox Document Submission (XDS) application on a Windows platform.

1. Close all applications and restart the workstation to avoid initialization and General Protection Fault error messages.

2. To begin the installation process, do one of the following:
   - Insert the Xerox Production Print Services (XPPS) version 3.7x software CD ROM in to the CD ROM drive on your PC.
   - Download the XPPS version 3.7x software from the Internet.
     b. In the [Search] text box at the top of the Xerox home page, enter XPPS and select [Search].
     c. On the search results list, select the item containing XPPS software version 3.7x.
     d. Following the instructions on the screens, load the executable XPPS install file xpps_for_win.exe to a desired location on your workstation.
     e. Double-select the xpps_for_win.exe icon to begin the installation process.

3. On the Choose Language screen, select a language in which the XPPS screens will be displayed. The About XPPS screen is displayed.

4. On the About XPPS window, select [Main Menu].

5. From the Main Menu, select [Install XPPS].

   **NOTE:** The installation program automatically detects which operating system is running.

6. On the Windows installation screen, select [Install XDS].

7. From the pull-down menu on the Choose Setup Language window, select the language in which the installation script will be displayed. Select [OK].

8. On the Welcome screen, select [Next].

9. Select a Setup Type (Typical, Compact, or Custom), then select [Next]. [Typical] is recommended.
10. If the destination folder `c:/program files/XPPS/` does not exist on your workstation, one will be created for you. Select [Yes] to confirm the directory creation.

11. On the Select Components window, [Xerox Document Submission (XDS) for Windows] is already selected by default.

   a. In the window on the right, select only the components that you will use on your workstation:
      - [DocuPrint] for DocuPrint NPS/IPS printers
      - [DocuSP] for DocuTech 61xx, DocuPrint EPS printers, DocuTech 65/75/90, and DocuPrint 65/75/90
      - [DT Server] for DocuTech 135 or 90 with Network Server or NS Plus Server Series
      - [DocuColor] for the DocuColor 20xx, 6060, and iGen3 printers

      **NOTE:** In order for XDS to function properly, you must make at least one selection in the window on the right.

   b. Select [Next].

12. On the next window, verify the settings that you have specified, then select [Next]. The system copies the XDS files to your workstation disk.

13. On the Setup Complete window, select [Finish] if you want to view the “Readme File” at this time. Otherwise, deselect the check box beside [Yes, I want to view the README file], then select [Finish].

After you have successfully completed the installation, the program group Xerox Applications is added to your workstation Start menu. The XPPS installation menu is displayed again.

14. Select another option to continue with installation of additional printer drivers, or select [Exit] to end the installation program.

Refer to the “Guide to Printing Using Xerox Production Print Services” guide for the procedure for setting up printer connections and accessing the XDS software.

**Installing Xerox custom PostScript and PCL drivers for Windows**
The Xerox customized PostScript printer drivers are used by Windows applications to program Xerox job ticket information and create a PostScript printer file. These drivers provide full support of the Xerox job ticket and all of the features of the supported Xerox printers.

Follow this procedure to install the Xerox custom printer drivers for Windows NT.

1. Insert the Xerox Production Print Services (XPPS) version 3.7x software CD ROM into the CD ROM drive on your PC. The installation program starts automatically. Depending on your system, this may take a few seconds.

2. On the Choose Language screen, select the language in which the XPPS screens will be displayed.

3. On the About XPPS window, select [Main Menu].

4. From the Main Menu, select [Install XPPS].

**NOTE:** The installation program automatically detects which version of Windows is available

5. On the Windows NT installation screen, select [Install Xerox Printer Drivers].

6. The next window gives the location of the printer information that is required for installation of the drivers. Read the instructions on the screen and note the directory location of the driver file, then select [Continue with Install].

7. On the window that opens, select [My computer], then select [Next].

8. Select an existing port if you are upgrading the drivers, or add a port if this is a new installation.

9. If you are adding a new port, select [Configure Port], then configure the new port as appropriate for your network environment.

10. Select [Next]. A list of supported printers is displayed.

11. Select [Have Disk]. The Install from Disk window opens.

12. On the Install from Disk window, browse to the CD drive. Locate the following directory (the location that you were instructed to note in step 6):

   Win_nt40\Xeroxdrv\Enu
NOTE: The “Enu” folder name stands for United States English. If you selected a different language from the Choose Language screen, a different name appears in this position, representing the language that you chose.

13. Open the .inf file.
14. On the Install from Disk window, select [Ok].
15. On the next window, make sure that the printer model (along with the PDL) that you selected previously is highlighted, then select [Next].
16. If the system asks you to do so, select [Replace Existing Driver] and select [Next].
17. Change the printer name if desired. The printer name should easily identify the printer. If another printer that is already installed has this name, enter a different name.
18. If desired, select [Yes] to make the selected printer the default for all Windows-based applications, then select [Next].
19. Select either [Shared] or [Not Shared], then select [Next].
20. If you selected [Shared], do the following:
   a. Enter a name that will be used for the shared printer.
   b. Select the operating systems of all of the computers that will print to the shared printer.
      NOTE: Only 9x files are provided as shared. The shared files are located on the cd at $/XPPS/Win95_98/shared.
   c. Select [Next].
   d. Determine where the shared driver resides, then select the desired driver that will be shared.
21. Select the option to print a test page to ensure that the installation completed correctly, then select [Next]. The printer drivers are installed.
   NOTE: If prompted for the PSCRIPT.DLL during the installation, you may need to use the Microsoft Windows CD to locate the PSCRIPT.DLL. Or, you may also try to find the PSCRIPT.DLL on the hard drive.
22. Validate that the test page printed correctly, then select [Yes]. If the test page did not print, you may select [No] to obtain troubleshooting tips that will help you to resolve the problem.
23. Select [Back] to install additional printer drivers, or select [Exit] to end the installation program.

**Enabling a custom paper size with the Xerox printer driver**

If a custom paper size is required, you enable the new paper size by saving it as a custom form. Perform the following steps to ensure proper performance:

1. From the Windows Start popup menu on your workstation, select [Settings], then select [Control Panel].
2. On the Control Panel, open the [Printers] icon.
3. From the File menu on the Printers window, select [Server Properties].
5. Select the [Create a New Form] check box.
6. Enter a name for the custom sized form in the [Form Description] box.
7. Select [Save Form], then select [OK].

**Printing on a custom sized stock**

To print from an application for which you will use a custom sized stock, follow this procedure to set up for printing:

1. If the document that you want to print is open:
   a. Select [Print] from the File pull-down menu within the application in which the document was created.
   b. On the Print Document window, select [Setup].

   If the application is open, but the document is not, select [Print Setup] from the File menu within the application.
2. On the Print Setup window, select the desired printer from the printers pull-down menu.
3. Select [Properties].
5. Ensure that [Paper Size] is highlighted in the top section of the window.
6. In the lower section of the window, select [PostScript Custom Page Size].
7. In the top section of the window, select the [Xerox Document Settings] option.
8. On the PostScript Custom Page Size Definition window, set the properties of the custom paper stock as desired. The available settings include:
   - Width and Height
   - Unit (of measurement)
   - Paper Feed Direction (short-edge or long-edge)
   - Type (cut-sheet or roll feed)
   - Offsets relative to feed direction (parallel or perpendicular)

9. Select [OK] to close the custom size window. If you want to change any of the settings you made, select [Edit Custom Page Size] to reopen the window.

10. Select [OK] on each window until you have returned to the Print dialog box.

11. In the Print dialog box, select [Print] to start printing.

Installing Xerox custom PostScript and PCL drivers for Windows 2000

The Xerox custom PostScript printer drivers provide full support of the Xerox Job Ticket and all of the features of the supported Xerox printers.

This section describes the procedure for installing the Xerox custom developed printer drivers for Windows 2000.

1. Insert the Xerox Production Print Services (XPPS) version 3.7x software CD ROM in to the CD ROM drive on your PC. The installation program starts automatically. Depending on your system, this may take a few seconds.

2. On the Choose Language screen, select a language in which the XPPS screens and installation script will be displayed.

3. On the About XPPS screen, select [Main Menu].

4. From the Main Menu, select [Install XPPS].

   **NOTE:** The installation program automatically detects which version of Windows is available

5. Select [Install Xerox Printer Drivers].
6. The next screen gives the location of the printer information that is required for installation of the drivers. Read the instructions on the screen and note the directory location of the drivers on the XPPS CD, then select [Continue with Install].

7. On the Welcome window, select [Next].

8. Select [Local Printer], then select [Next].

9. Select an existing port if you are upgrading the drivers, or add a port if this is a new installation.

10. If adding a new port, configure the port as appropriate for your network environment.

11. Select [Next].

12. Select [Have Disk], and browse to the CD.

13. Browse to the Win_2000\Xeroxdrv\Enu directory.

   NOTE: The “Enu” folder name stands for United States English. If you selected a different language from the Choose Language screen, a different name appears in this position, representing the language that you chose.

15. Select [Ok]. A list of supported printers is displayed.

16. Select the printer type that you are installing, then select [Next].

17. If the system asks you to do so, select [Replace existing driver], then select [Next].

18. If desired, change the printer name. The printer name should easily identify the printer.

19. If desired, make the printer the default for all applications, then select [Next].

20. Select [Do Not Share this printer], then select [Next].

21. Select [Yes] to print a test page to ensure that the installation completed correctly, then select [Next].

22. Select [Finish] to complete the installation.

   NOTE: If prompted for the PSCRIPT.DLL during the installation, you may need to use the Microsoft Windows CD to locate the PSCRIPT.DLL. Or, you may also try to find the PSCRIPT.DLL on the hard drive.

23. An error message, “Digital Signature Not Found,” displays and is expected. Select [Yes] to continue with the installation.
24. Select [Continue with Install] to install additional Xerox drivers, or select [Back] to install additional printer drivers, or select [Exit] to end the installation program.

Installing Xerox custom PostScript and PCL drivers for Windows XP

This section describes the procedure for installing the Xerox custom developed printer drivers for Windows XP.

1. Select [Start: Settings] and select [Printers].
2. Select and double-click the [Add Printer] icon in the printer folder.
3. On the Welcome window, select [Next].
4. Select [Local Printer], then select [Next].
5. Select an existing port if you are upgrading the drivers, or add a port if this is a new installation.
6. If adding a new port, configure the port as appropriate for your network environment.
7. Select [Next]. A list of supported printers is displayed.
8. Select [Have Disk]. The Install from Disk window opens.
9. On the Install from Disk window, browse to the hard drive directory or open the CD. Locate the following directory (the location that you extracted the executable file to): Web_xpps/Win_XP/Xeroxdrv\Enu
10. Open the .inf file.
11. On the Install from Disk window, select [Ok].
12. On the next window, make sure that the printer model, along with the PDL that you selected previously, is highlighted. Select [Next].
13. If the system asks you to do so, select [Replace Existing Driver] and select [Next].
14. If desired, change the printer name. The printer name should easily identify the printer.
15. If desired, make the printer the default for all applications, then select [Next].
16. Select [Not Shared] then select [Next].
17. Select [Yes] to print a test page to ensure that the installation completed correctly, then select [Next].
18. Select [Exit] to complete the installation.
Installing the Adobe PS Printer Driver with Xerox PPD files for Windows 2000

This section describes the procedures for installing a Xerox PPD file for use with the Adobe PostScript driver on Windows 2000 systems.

Using the Adobe PS driver with a Xerox PPD file does not provide access to the full feature set of the printer and does not access the Xerox Job Ticket.

**NOTE:** You will need to either set up the printer port prior to installing the PPD files using Add Printer in the [Settings: Printers] menu, or, after the installation is complete, then configure the port.

1. Insert the Xerox Production Print Services (XPPS) version 3.7x software CD ROM in the CD ROM drive on your PC. The installation program starts automatically. Depending on your system, this may take a few seconds.
2. On the Choose Language screen, select a language in which the XPPS screens will be displayed.
3. On the About XPPS screen, select [Main Menu].
4. From the Main Menu, select [Install XPPS].
   **NOTE:** The installation program automatically detects which version of Windows is available.
5. From the installation menu, select [Install Adobe PS Printer Drivers].
6. The next screen gives the location of the printer information that is required for installation of the drivers. Read the instructions on the screen and note the directory location of the PPD files on the XPPS CD, then select [Continue with Install].
7. On the Welcome window, select [Next].
8. Read the Adobe End User License Agreement, then select [ACCEPT] to accept the agreement.
9. On the next window, select the type of printer connection: [Local Printer], [Network Printer], or [WebReady Printer], then select [Next].
10. If the printer is a network printer, enter the network path or queue name, or browse to locate the printer on the network.
11. On the Local Port Selection window, select an existing port if you are upgrading the drivers, or add a port if this is a new installation.

12. If you are adding a new port, select [Configure Port], then configure the new port as appropriate for your network environment.

13. Select [Next].

14. On the Select Printer Model window, browse to the CD and locate the PPDs in the following directory:

   **Win_NT40\ADOBEPS\Enu\PPDS.**

15. Select the PPD that matches the printer that is being installed, then select [Next].

   **NOTE:** The PPDs that are designated as Kanji are designed only for installations that support Kanji character and font sets.

16. On the Sharing window, specify whether or not the printer is a shared printer.

   - If the printer is shared, select [Shared], and enter a name for it.
   - If the printer is not shared, select [Not Shared].

17. Select [Next].

18. On the Printer Information window, do the following:

   a. Enter a name that identifies the printer.
   b. Select [Yes] or [No] to specify whether the printer will be the default printer for all applications.
   c. Select the option to print a test page.
   d. Select [Next].

19. Review the information in the Setup Information window, then select [Install].

20. On the Setup Complete window, select [Finish] if you would like to review the Read Me file at this time. Otherwise, deselect the check box beside [Yes, I want to view the README file], then select [Finish].

21. After the installation procedure has copied the files, you are asked to set the device settings for the printer. Leave the settings at the defaults by selecting [Cancel].

22. When the installation is complete, you may be asked to restart the workstation. Select [Yes] if you want to restart your workstation now, or [No] if you want to restart the workstation later.
23. Select [Back] to continue with installation of additional printer drivers, or select [Exit] to end the installation program.

**Using XPPS in a mixed PostScript level 2 and level 3 environment**

Starting with XPPS version 2.3, PostScript drivers and PPDs and the DocuSP 1.4 software provide access to PostScript Level 3 features in your print production environment.

**Printers that support PostScript Level 3:**
- DocuTech 61xx with DocuSP 1.4 or higher
- DocuTech 65 and DocuPrint 65 version 1.1 with DocuSP 1.4 or higher
- DocuTech 75/90 and DocuPrint 75/90 with DocuSP 2.1 or higher
- DocuPrint EPS printers
- DocuTech 135/NSPlus Server Series with version 4.0/4.0i
- DocuColor 2045, 2060, and 6060
- iGen3

**Printers that support PostScript Level 2 only:**
- DocuTech 61xx with DocuSP 1.3x or lower
- DocuTech 65 and DocuPrint 65 version 1.0 with DocuSP 1.3
- DocuTech 135/90 with Network Server
- DocuPrint NPS printers

Xerox recognizes that many customers have a variety of Xerox printers in their production print environments. This section details how to enable printing from the XPPS version 2.3 and higher client software to both PostScript Level 2 and PostScript Level 3 printers.

**PostScript Level 3 with DocuSP 1.4 and higher**

Since the XPPS version 2.3 and higher are capable of PostScript Level 3 printing, following the installation instructions in this guide should allow immediate PostScript Level 3 printing access to all printers currently loaded with DocuSP version 1.4 or higher software.
In order to use the Xerox PostScript driver or the native Adobe PostScript driver with Xerox PPDs, version 2.3 or higher, with a DocuTech 61xx or DocuTech 65/DocuPrint 65 with DocuSP version 1.3x or lower, perform one of the following procedures as appropriate.

Note which printers available on the client workstation are PostScript Level 3 (DocuSP 1.4 or higher) and which are PostScript Level 2 (DocuSP 1.3x or lower).

**In Windows 95/98:** For printers that support PostScript Level 2 follow this procedure.

1. From the Windows Start menu, select [Settings], then [Printers].
2. On the Printers window, select the right mouse button on the name of the PostScript Level 2 printer.
3. Select [Properties] from the pop-up menu that appears.
5. On the PostScript tab, select [Advanced].
6. Change the PostScript language level from 3 to 2.
7. Select [OK].
5 Installation and configuration for XDS Plus

The Xerox Document Submission Plus (XDS Plus) software is a standalone application that is used to enter job ticket information for an existing PDL file and submit the job to an available printer running DocuSP version 3.1 or higher software.

This chapter contains the information that you need to install the Xerox Document Submission Plus (XDS Plus) application. This software enables users of Xerox supported networks to take advantage of the many printing options that are offered by the supported Xerox printing systems.

You do not need to install printer drivers in order to submit jobs using XDS Plus. When the XDS Plus software is installed on your workstation, it automatically establishes communication with all printers to which your workstation is connected.

**NOTE:** For information on how to configure the IPP and HTTP gateways at the DocuSP controller, refer to the Common Controller System Guide. This information is also available on the Help screens of the DocuSP.

**NOTE:** Throughout this section, shortcuts are often described. Although shortcuts are helpful, they will only work if the default shortcut location was used at install.

### Workstation requirements

Your workstation must meet the following hardware and software requirements to run XDS Plus:
Hardware requirements

For Windows 95/98, Millenium Edition (ME), NT 4.0, 2000, XP, Solaris 2.6 and 2.8:
- 400 MHz or higher CPU
- Hard disk drive:
  - Windows 9x/ME: 15 MB
  - Windows NT 4.0/2000/XP and Solaris 2.6 and greater: 20 MB
- CD ROM or Internet access

For Macintosh:
- A Macintosh Power PC
- Base Operating System Requirements
  - G3 or faster
- Hard disk drive
- CD ROM or Internet access

Software requirements

To use XDS Plus, your PC or workstation must be running one of the following operating systems:
- Sun Solaris 2.6 or 2.8
- Macintosh OS X version 10.1 or higher, Native Mode

One of the following Internet browsers is also required:
- Internet Explorer version 5 or higher
- Netscape version 6.2 on Solaris

Removing previous versions of XDS Plus

If a previous version of XDS Plus has been loaded, you should uninstall the old version before installing the new one. You can uninstall the XDS Plus without uninstalling Xerox Production Printing Services (XPPS).
Uninstalling from Windows

The upgrade process does not overwrite your job ticket (*.xpf) files, which contain information on how a job should be printed.

Follow these steps to uninstall XDS Plus on a PC that is running Windows:

1. From your workstation select [Start] and then select the following options in the order that they are listed below:
   a. [Programs]
   b. [Xerox Applications]
   c. [XDS Plus Tool Suite <version>]
   d. [Uninstall XDS Plus Tool Suite]

2. On the Uninstaller window, select [Uninstall]. The next window displays the names of the components as the system uninstalls them. When XDS Plus has been completely uninstalled, the Uninstaller window displays the message “Uninstall Complete.”

3. Select [Quit] to close the Uninstaller window.

Uninstalling from Solaris

Follow these steps to uninstall XDS Plus on a Sun workstation that is running Solaris:

1. Double-select the application icon called **Uninstall_XDS_Plus_Tool_Suite**, located in the following directory:

   `/<your home directory>/Xerox_Applications/XDS_Plus_Tool_Suite_<version>/Uninstall_XDS_Plus_Tool_Suite`

2. On the Action: Run window that opens, select [OK]. A Run window opens.

3. Wait for the Uninstaller window to open. This may take several seconds.

4. On the Uninstaller window, select [Uninstall].

   The next window displays the names of the files as the system uninstalls them. When XDS Plus has been completely uninstalled, the Uninstaller window displays the message “Uninstall Complete.”

5. Select [Quit] to close the Uninstaller window.
Uninstalling from Macintosh OS X

To uninstall a previous version of XDS Plus when using a Macintosh OS X platform, perform the following:

1. Browse to the folder where the XDS Plus application is saved.
3. Select [Uninstall].
4. When the uninstall is complete, select [Exit].

Installing XDS Plus on Windows 95, 98, and Millennium systems

This section details the installation instructions for the XDS Plus software in order to print to Xerox printers from a workstation running Windows 95, Windows 98, or Windows Millennium.

Perform the following to install the XDS Plus software, the Xerox Job Ticket Converter tool, XDS Command Line, and the XDS Printer Registration tool.

NOTE: In order for XDS Plus to communicate with the DocuSP controller, the IPP Gateway on the controller must be installed and configured. Refer to the Help System for DocuSP for instructions on configuring the gateways.

1. To begin the installation process, do one of the following:
   - Insert the Xerox Production Print Services (XPPS) version 3.7x software CD ROM in to the CD ROM drive on your PC. The installation program starts automatically and may take a few seconds.
   - Download the XPPS version 3.7x software from the Internet.
     b. In the [Search] text box at the top of the Xerox home page, enter XPPS and select [Search].
     c. On the search results list, select the item containing XPPS software version 3.7x for Windows 9X and Millennium.
     d. Following the instructions on the windows, save the executable XPPS install file xpps_for_win.exe to a desired location on your workstation.
e. Double-click the xpps_for_win.exe icon to begin the installation process.

2. Using My Computer, open the XDSPlus file folder.
3. Open the [application] folder.
4. Double-click the XDSPlus_install icon.
5. On the opening window, select the language which the windows will be displayed.
6. On the Introduction window, select [Next].
7. Read the license agreement and accept by selecting [I accept the terms of the License Agreement], then select [Next].
8. From the Windows 9x/Millennium XPPS installation menu, select [Install Xerox Document Submission Plus].
9. On the next window that opens, select the language for the installation script from the pull-down menu, then select [OK].
10. On the Introduction window, select [Next].
11. On the Choose Install Folder window, either select [Choose] to browse to a new location for the XDS Plus files, or select [Next] to accept the default location and continue.

**NOTE:** *Descriptions of the different installations are available on the Choose Install Set window.*

12. On the Choose Shortcut Location window, the path to the default shortcut location is displayed in the [Other] text field. Leave this option selected, and select [Next].
13. On the Choose Java Virtual Machine window, select [Install Java VM specifically for this application], then select [Next].
14. On the Choose Install Set window, select [Typical Install], then select [Next].

If you want to install XDS Command Line now, select [Customize], then follow the procedure that is described under “Installing XDS Command Line,” later in this chapter.

**NOTE:** *It is advised to perform the most complete installation (Typical) if you ever intend to use more than one application.*

15. On the Pre-Installation Summary window, review the settings, and select [Install].
You may set up the printer discovery file from within XDS Plus after installation. Refer to “Setting up the printer discovery (printer.disc) file,” in this document for the procedure.

The 98/ME Pre-Installation Summary window is displayed.

**NOTE:** *The printer registration file is shared by both the XDS application and the XDS Command Line.*

16. On the Install Complete window, select the [View ReadMe] check box if you want to open the ReadMe file, then select [Done]. You are returned to the XPPS installation menu.

17. Select another item to install, or select [Exit] to exit the installation program, and reboot your system.

18. Specify the printers that you will use with XDS Plus, using the XDS Printer Registration tool to edit the printer discovery file. Refer to “Setting up the printer discovery (printer.disc) file,” later in this chapter, for the procedure.

19. The first time you run XDS Plus, enter the path of the printer discovery file. Select [XDS Plus: Options: Preferences] in the Printers tab, and enter the directory path of the printer registration file.

**NOTE:** *What was previously known as the Seed File, is now the Printer Discovery File Location.*

---

**Installing XDS Plus on Windows NT, 2000, and XP systems**

This section details the installation instructions for the Xerox Document Submission Plus (XDS Plus) software in order to submit jobs to Xerox printers from a Windows NT 4.0, 2000, or XP workstation.

Follow these steps to install the XDS Plus software, the Xerox Job Ticket Converter tool, XDS Command Line, and the XDS Printer Registration tool on Windows NT, 2000, or XP.

**NOTE:** *In order for XDS Plus to communicate with the DocuSP controller, the IPP Gateway on the controller must be installed and configured. Refer to the Help System for DocuSP for instructions to configure the gateways.*

1. To begin the installation process, do one of the following:
Installation and configuration for XDS Plus

- Insert the Xerox Production Print Services (XPPS) version 3.7x software CD ROM into the CD ROM drive on your PC.
- Download the XPPS version 3.7x software from the Internet.
  b. In the [Search] text box at the top of the Xerox home page, enter XPPS and select [Search].
  c. On the search results list, select the item containing XPPS software version 3.7x for Windows NT and 2000.
  d. Following the instructions on the windows, save the executable XPPS install file xpps_for_win.exe to a desired location on your workstation.
  e. Double-click the xpps_for_win.exe icon to begin the installation process.

2. Using My Computer, open the XDSPlus file folder.
3. Open the [application] folder.
4. Double-click the XDSPlus_install icon.
5. On the opening window, select the language which the windows will be displayed.
6. On the Introduction window, select [Next].
7. Read the license agreement and accept by selecting [I accept the terms of the License Agreement], then select [Next].
8. Read the Important Information window, and select [Next].
9. On the Choose Install Folder window, select [Next] to select the default location for the XDS Plus files.
10. On the Choose Shortcut Location window, ensure where the product icons will display. Select [Next].
11. On the next window, select [Install Java VM specifically for this application], then select [Next].
12. On the Choose Install Set window, select [Typical Install], then select [Next].
   If you want to install XDS Command Line now, select [Customize]. Then click the XDS Command Line box so that it is checked. Select [Next]. If you do NOT want to install the XDS Command Line now, select [Next].

**NOTE:** It is advised to perform the most complete installation (Typical) if you ever intend to use more than one application.
13. On the Pre-Installation summary window, review the settings and select [Install].

You may set up the printer discovery file from within XDS Plus after installation. Refer to “Setting up the printer discovery (printer.disc) file,” later in this document.

14. On the Install Complete window, select the [View ReadMe] check box if you want to open the ReadMe file, then select [Done].

15. Select another item to install, or select [Exit] to exit the installation program, and reboot your system

16. Specify the printers that you will use with XDS Plus, using the XDS Printer Registration tool to edit the printer discovery file. Refer to “Setting up the printer discovery (printer.disc) file,” later in this document, for the procedure.

Installing XDS Plus on a Sun Solaris system

This section details the installation instructions for the Xerox Document Submission Plus (XDS Plus) software in order to submit jobs to Xerox printers from a Sun Solaris 2.6 or 2.8 workstation.

Follow these steps to install the XDS Plus software, the Xerox Job Ticket Converter tool, XDS Command Line, and the XDS Printer Registration tool on Solaris.

**NOTE:** These instructions assume a basic knowledge of UNIX and using a Terminal window to perform general file management functions.

**NOTE:** If XDS Plus for Solaris is installed as root, other users may not be able to utilize XDS Plus unless the default permissions are modified.

**NOTE:** In order for XDS Plus to communicate with the DocuSP controller, the IPP Gateway on the controller must be installed and configured.

**CAUTION:** If you do not specify placing the XDS_Plus_Tool_Suite_<version> folder directly into your home directory, i.e. /export/home/xrxusr, you may not be able to access the XDS Plus files.

1. To begin the installation process, perform one of the following:
Insert the Xerox Production Print Services (XPPS) version 3.7x software CD ROM into the CD ROM drive on your workstation.

a. In a terminal window from your home directory, type:

```
cd /cdrom
<enter>
ls
<enter>
```

You should see the XPPS version. Take note of this to enter the correct path below.

In a terminal window from your home directory, for example, `/export/home/xrxusr`, type the following:

```
cp /cdrom/xpps_<version>/solaris/*.* ./
```

where version is separated by underscores, for example 3.1.11 would be:

```
cp /cdrom/xpps_3111/Solaris/*.* ./
```

• Download the XPPS version 3.7x software from the Internet.
  a. Access the web site [www.xerox.com](http://www.xerox.com) and select the “Drivers” link.
  b. In the [Search] text box labeled "Quick Search for Drivers and Downloads", enter **XDS Plus** and select [Search].
  c. On the search results list, select the item containing XPPS software version 3.7x for Sun Solaris 2.6 and 2.8.
  d. Download the install file named **xdsplus_install.bin** to your home directory.

2. On a Terminal window, enter the following command to set the execute permission for the installer. To verify the filename, perform a directory list (ls) first.

   **For a CD install, type:**
   ```bash
   chmod +x XDSPlus_install.bin
   ```

   **For a web download install, type:**
   ```bash
   chmod +x XDSPlus_install.bin
   ```

3. Enter the following command on the Terminal window command line to start the installation:

   **For a CD install, type:**
   ```bash
   ./XDSPlus_install.bin
   ```
For a web download install, type:

./XDSPlus_install.bin

4. On the language window, select the language for the installation script from the pull-down menu, then select [OK].

5. On the Introduction screen, select [Next].

6. Read the license agreement and accept by selecting [Yes], then select [Next].

7. Read the Virtual Machine (VM) instructions, then select [Next].

8. On the Choose Install Folder window, select [Next] if the path /<home directory>/XPPS/
   XDS_Plus_Tool_Suite_<version> is already entered for you. If it is not, enter the path /<home directory>/XDS/
   XDS_Plus_Tool_Suite_<version>. It is the home directory for the XDS Plus files. Then select [Next].

9. On the Choose Link Location window, the path to the default link is displayed in the [Other] text field. If this alternate directory is not one that is owned by you as a user, enter a different directory location for the link. Then select [Next].

10. On the next window, select [Install Sun Java VM specifically for this application], then click [Next].

11. On the Choose Install Set window, select [Typical Install] and click [Next]. If you want to install the XDS Command Line now, click [Customize] and follow these steps:
    a. On the Customize Install window, select the [XDS Command Line] check box.
    b. Select [Next].

12. Review the Pre-Installation Summary, then select [Install].

13. On the Install Complete window, select the [View ReadMe] check box if you want to open the ReadMe file, then select [Done].

14. Specify the printers that you will use with XDS Plus using the XDS Printer Registration tool to edit the printer discovery file. Refer to "Setting up the printer discovery (printer.disc) file" later in this document for the procedure.
NOTE: If a previous version of XDS Plus has ever been installed on this system, you must manually delete every occurrence of the following files: xpif-v1500a.dtd, xpif-v1500b.dtd, xpif-v10.dtd. These files are typically found in Home_Directory/.JxdsUIRootInfo. Since the file locations may vary based on your OS version and system configuration, the most reliable way to delete the dtd files is to search your system for all occurrences of them and then delete them. Please note, if you never tried to save or open a job ticket, you may find no occurrences of the files.

1. To begin the installation process, do one of the following:
   • Insert the Xerox Production Print Services (XPPS) version 3.7x software CD ROM in to the CD ROM drive on your PC.
   • Download the XPPS version 3.7x software from the Internet.
     b. In the [Search] text box at the top of the Xerox home page, enter XPPS and select [Search].
     c. On the search results list, select the item containing XPPS software version 3.7x for Macintosh.
     d. Following the instructions on the windows, save the executable XPPS install file xpps_for_mac.sit to a desired location on your workstation.

2. Double-click on xpps_for_mac.sit.

3. From the Install Browser, click on the XDS Plus link.

4. Open the XPPS_for_mac folder. XDSPlus_install.sit will be found in the OS X Native folder. To run the installer double click on the file using File Manager or, using the command line, enter 
   ./XDSPlus_install.

5. Next you must add your printers. Use the XDS Printer Registration application to edit the printer discovery file. Refer to the procedure in this guide, “Adding Printers to the Registered Printers List.” Remove any current entry from the file. Add an entry for each of the logical printers that you want XDS Plus to access. Save the file and exit the tool. Please note the path of the printer discovery file you just updated as you will need it later.
6. Run XDS Plus by double clicking on XDSPlus in the install folder (the default location of the install folder is Home_Directory/Applications/XPPS/XDSPlus_Tool_Suite<version>) or by using the shortcut you specified at install time (the default location of the shortcut is Home_Directory/Applications/Xerox Applications/XDS_Plus_Tool_Suite <version>/XDS Plus->XDS Plus).

7. Enter the path of the printer discovery file (from step 4) in [XDS Plus: Options: Preferences] in the Seed File Location field. If you have already specified the location during install, you do not need to do it again here. An example of the URL format you need to use for a local file is:

    file:///home/nmehla/XPPS/XDSPlus_Tool_Suite <version>/printer.disc.

---

**Installing XDS Command Line**

XDS Command Line enables you to submit jobs by entering commands on a command line in a DOS or Unix window, instead of making selections from the graphical user interface windows. To install XDS Command Line, you must either be in the process of installing XDS Plus, or have XDS Plus already installed on your workstation.

1. Perform the steps for installing XDS Plus for your platform and select [Customize] when selecting the install set. Check [XDS Command Line].

2. On the Choose Install Set window, select [Customize].

3. On the next window that opens, select the [Command Line Client] check box, then select [Next].

4. Complete the remaining steps of the XDS Plus installation procedure.

---

**Installing the XDS Plus Job Submission Applet for the Internet**

If you want to run XDS Plus using the Internet, you do not have to install XDS Plus on your system. Instead, you access your printer controller using your Internet browser in order to display and interact with the XDS Plus windows on your workstation.
The first time that you use the XDS Plus Job Submission Applet, you are instructed to download the Java 2 Runtime Environment software to enable you to use the Applet to access the printer over the web.

The XDS Plus window is then displayed on your workstation and you are able to perform all job setup and printing processes that are available with XDS Plus.

**NOTE:** In order to run the XDS Plus Applet on Solaris or Windows, enable JavaScript in your browser. On the Macintosh, enabling JavaScript is not necessary.

Refer to “Accessing XDS Plus from the Internet,” in the “Printing a document using XDS Plus” guide, for the procedure for accessing XDS Plus using the Web.

### Setting up the printer discovery file

The printer.disc (printer discovery) file contains a list of the IPP (Internet Printing Protocol) addresses of all printers that are connected to your workstation and whose controllers are running DocuSP level 3.0 or higher, or NPS 8.0 and higher. The name “printer.disc” is the default name for the printer discovery file, but it can be any name that you choose. The printer discovery file is used for locating both IPP and LPR printers.

When XDS Plus is opened and run, it reads the printer discovery file and displays the names of the connected printers in the Print Monitor and Change Printer windows as appropriate.

To be able to use your connected printers with XDS Plus, you must set up the printer discovery file by entering in it the IPP addresses of those printers. The printer controllers must be running DocuSP software level 3.0 or higher, or NPS 8.0 and higher.

The following sections describe the procedures that are available from the XDS Printer Registration windows.

### Accessing the printer discovery file

To enter your printers into the printer discovery file, the best method is to use the XDS Printer Registration tool.
Opening the printer discovery file on Windows systems

To open your printer discovery on a Windows system, perform the following:

1. Access the XDS Printer Registration tool by selecting the following options from your workstation [Start] pop-up menu, in the order that they are listed below:
   a. [Programs]
   b. [Xerox Applications]
   c. [XDS Plus Tool Suite <version>]
   d. [XDS Plus]
   e. [XDS Printer Registration]
   The Load Default File window appears and asks “Do you want to load your default printer file.” Select [Yes].

2. On the XDS Printer Registration window, select [File: Open].

3. On the Open window, browse to locate the printer discovery file, created by XDS Plus at installation. The default location is C:\Program Files\XPPS\XDS Plus Tool Suite <version>.

4. Ensure that printer.disc is displayed in the [File name] field, then select [Open].

   On the XDS Printer Registration window, the [Registered Printers] list box displays the host addresses of any printers that have already been entered in this file.

   If the IP address of your printer has not been added, follow the instructions provided in this chapter, “Adding printers to the Registered Printers List.”

   **NOTE:** If your printer has already been added, select [Save/Exit] and do not follow the instructions found in “Adding Printers to the Registered Printers List”. Continue with the section titled, “Setting User Preferences” in the Printing Guide.

Opening the printer discovery file on Solaris systems

To open the printer discovery file on a Solaris system, perform the following:

1. Using the File Manager, double-click the [XDS_Printer_Registration] application icon, located in the following directory:
NOTE: If asked, “Do you want to run the selected application in a Shell Tool or without one?” Select “No Shell Tool.”

An Action: Run window opens.

2. On the Action: Run window, select [OK]. A Run window opens.

NOTE: If a printer registration file has been created for a previous version, it will be referred to as your default printer registration file. You will be asked if you want to open this file.

3. Wait for the XDS Printer Registration window to open. This may take several seconds.

4. On the XDS Printer Registration window, select [Open].

5. On the Open window, select the path for the printer registration.

6. Select a printer discovery file such as printer.disc. It should now be visible in the [File name] box. Select [Open].

7. On the XDS Printer Registration window, the [Registered Printers] list box displays the host addresses of any printers that have already been entered in this file.

**Adding printers to the Registered Printers list using the Printer Registration Tool**

To print documents using XDS Plus, you must use the XDS Printer Registration tool to enter the IPP address of your connected printer to the list of registered printers.

NOTE: XDS Plus supports many printer types, including LPR printer models. ASCII attributes are sent to these LPR printers and can be set up using the Printer Registration Tool.

Example:

```
```

Perform the following to add the IPP addresses of your connected printers to the printer discovery file.

1. Open the printer discovery file. Refer to “Accessing the printer discovery file,” in this document, for the procedure.
2. Select [Add...].

3. In the Add Printer window, select IPP Printer or LPR Printer and select [Next].
   
   If LPR is selected, type in the IP address and queue name, and select Printer Type. Select [Finish].
   
   If IPP is selected, on the next window select either DocuSP or Other. Select [Next]. Type in the IPP address, and select [Next].
   
   Enter the Host Name and IP address.

4. Select [Save] to save the new entry.

5. Repeat steps 3 through 5 for any additional printers that you want to register. They must have controllers running DocuSP 3.0 or higher, or NPS 8.0 or higher.

6. When finished, select [Exit].

Specifying the location of the printer discovery file for Windows and Macintosh

In order for XDS Plus to locate the printer discovery file (printer.disc) and access the connected printers, you must specify the location of the printer discovery file. You can do this from the Preferences window within XDS Plus. If you move the printer discovery file on your workstation file system, you must enter the new location in the Preferences window.

To specify the location of the printer discovery file, perform the following:

1. Open XDS Plus.
2. Select Options.
3. Select Preferences.
4. Select the Printers tab. In the Printer Discovery Location, enter or browse to the location of the printer discovery file.

   For Windows, enter file:\\c:\Program Files\...
   
   For Macintosh, enter file:\\applications\...

Specifying location of the printer discovery file for Solaris only

To set user preferences, perform the following:

2. When the XDS Plus appears, select the [Options] menu and select [Preferences].

3. On the IPP tab, in the IPP Seed File Location, type the following:
   
   `file:///C:\Program Files\xpps\XDS Plus Tool Suite <version>\printer.dic`

   An example of how it might be entered is the following:
   
   `file:///C:\Program Files\xpps\XDS Plus Tool Suite 3.1.011\printer.dic`

4. Select [Save].

**Modifying the printer list**

You can modify entries on the [Registered Printers] list by performing the following:

1. Open the printer discovery file.
2. A list of registered printers is displayed. Select the printer that you want to modify.
3. Select [Modify...].
4. On the Modify text window, make the desired changes to the printer entry and select [Finish].
5. Select [Finish]. The XDS Printer Registration is displayed.
6. Select [File: Save].

**Deleting a printer**

To delete a printer from the [Registered Printers] list, perform the following:

1. In the XDS Printer Registration window, select the printer entry that you want to remove.
2. Select [Delete...].
   
   The printer entry is removed from the list.
4. Select [Save] to save the revised file. If you want to close the window without saving your changes, select [Exit] without selecting [Save].
