Purpose

This firmware release contains fixes and features added since version 52.004.26.000 such as the following as well as many others:

- Mitigation of the POODLE (CVE-2014-3566). Changes default of SSL to off and use TLS only. The "TLS Only" or "Only TLS" checkbox will be enabled by default and will support TLS versions 1.2, 1.1 and 1.0. When choosing the "TLS Only" or "Only TLS" checkbox, all SSL only connections will no longer work. If "TLS Only" or "Only TLS" is unchecked, the device will use SSL (v1 or v2) and TLS (all versions) simultaneously if needed.
- Security enhancements such as controlling machine access with IP Filtering, ability to require Admin credentials to print the configuration report, ability to restrict device web page access to admins only, ability to enable or disable the printing of configuration sheets at power on.
- Scan to email fails constantly on SMTP-Server: auth-smtp.nebula.fi
- DHCP Leasing behavior incorrect
