RELEASE NOTES
August 17, 2012</p>

These release notes describe changes to the above products and contain descriptions of features not in our documentation. All updates are cumulative; changes made in previous updates are included in this release. This release must be applied on top of the base release 4.00, and will update each of the above products if installed.

<p style="text-align: center;">DesignPro Tools Professional 4.00.02</p>

New Features

Visual PPFA

QR Barcodes
QR Barcode support added.

Fixes

Network

Network Licensing Optimized
DesignPro Tools applications along with the resources (fonts, forms, images) open without any delay when DesignPro Tools Client and License Server are not on same LAN.

Form Editor

Correct Message Displays on Saving
Correct message 'Image "ABC" Linking as IMG.' displays when a form is saved as a Xerox Form Object (FRM) with **Export Images** option selected.
Note: Export Images option is available in Xerox LPS Resource Writer Resources dialog under Images category.

Font Editor

Font Parses Correctly
Font Editor generates a warning message and continues with parsing if FNM field value exceeds its limit.

Visual PPFA

Colors Preserved

Colors applied on fields and records are preserved and display properly for AFP PageDef Object (P1*.obj).

Changes to an OVE Saved

Changes made to an AFP Overlay Object (OVE;01*) are preserved when a FormDef is saved as an Elixir FormDef (EFD) in Visual PPFA.

Memory Released Optimized

Visual PPFA is optimized to release memory properly when currently opened PageDefs/FormDefs are closed and hence, files save properly.

Note: Previously memory was not released correctly when PageDefs/FormDefs were closed without closing Visual PPFA. The workaround was to close Visual PPFA before opening the next PageDef/FormDef.

Transformation Suite 9.00.02

Parsers (PCL)

12T Command Supported

Support for 12T command is added and hence, Helvetica Condensed font is parsed properly and text is positioned correctly during conversion of PCL file.

DesignPro Tools Professional 4.00.01
May 15, 2012

Fixes

Form Editor

Moving Multiple Objects
When a set of objects is moved multiple times consecutively using the <Arrow> key, the moves are considered as a single action and this action is logged only once. Hence, the error message "Error during logging undo/redo action. Not enough storage is available to complete this operation." no longer displays.

Note: To move objects slightly in one direction, press <Arrow> key; to move objects ten times as far, press <Ctrl> + <Arrow > keys.

Visual PPFA

Revision Date Updates Properly
Revision date/time stamp updates whenever a PageDef/FormDef resource is saved in Visual PPFA. However, Revision date/time stamp does not change when a resource is converted via DesignPro Manager as there is no modification to the resource.

DesignPro Manager

Tile to Font Works Correctly
Tile to Font works correctly for all glyph width values i.e. aligned (multiple of 8) or unaligned.

Elixir PrintDriver

Files Convert over a Mapped Network Drive
Files convert successfully over a mapped network drive.

Microsoft® Word® 2010 Documents Convert Properly
Microsoft® Word® 2010 documents convert to ELX format successfully on Windows 7.

Converters

OGL

Output Generates Correctly
In a customer specific environment, OGL output generates without extra spaces and text justification applies correctly.

PPFA

Outline Fonts Created Successfully
For Outline fonts, Ratio and Height values are written properly and correct naming convention is followed. In addition, Field/Records render in the design accordingly.

PageMiner 5.00.01

Fixes

PageMiner/Elixir Viewer

AFP to PDF Conversion
AFP files convert to PDF format smoothly. AFP files open in Elixir Viewer and PageMiner correctly.
