Configuration: DigiPath

Release: 4.1.0.9

DigiPath Number : Bulletin 97

Distribution Date: 2/05

Expiration: next release

Title: Announcing DigiPath Patch Software Version 4.1.0.9

ANNOUNCEMENT

A new DigiPath baseline software patch, version 4.1.0.9 (kit # 301K13717) has been released for mass distribution as the new baseline for DigiPath software. This patch should be installed on all DigiPath 4.1 software systems effective March 1, 2005. All software support channels will be based on the assumption that all systems have been upgraded to this version. Problems fixed in this patch release will no longer require a SPAR submission.

All DigiPath patches are cumulative which means that all new patches also contain all of the previous patches within them. A listing of all SPARS fixed for each software patch version since the previous baseline is listed below.

The software will be distributed within the FreeFlow™ 3.0 kits (301K14420) distributed to field service.

NOTE: This will be available for ordering out of MAPS on March 1st, 2005.

DigiPath Patch 4.1.0.9

DigiPath 4.1.0.9 includes all fixes provided in 4.1.0.7 through 4.1.0.8 as well as correcting the following problems,

- Deskew does not work for images rotated to the right
- Deskew not working on pages that are skewed to the left
- A standard type stock can be assigned for a direct insert stock
- [Insert: Blank Page] menu is disabled with a formDesc file
- Document Scan and Makeready crashes
- A document scanned in SEF is printed slower than it did with DigiPath 2.1
- A page exception begins with a back side page
- Job ticket problem
- Additional pages being added to document
- Cannot create reports on system installed with Finnish regional settings.
- Incorrect date display
- Can't staple beyond 70 sheets by using subset finishing option
- Staple A3 can not be used with "subset finishing"
- TIFF scaling error
- Selecting "Rotated Tiff's" in Scan Tool gives error codes when scanning
- Error when stapling with PDF conversion tool
- Page 1 of the document shading is not as expected
- Page 3-7 of the document pages are cut

- Page 2 of the document "3pages.pdf" is not detected by colour splitter
- No finishing options for signature rdo to 2101 printer
- XPIF data missing fault at DC6060 printer
- Invalid error message comes up when inserting a second direct insert stock
- Save as pdf creates an empty file as dpadmin
- No error message when inserting corrupt or bad ps file
- Not applying scan tickets to job
- Page number placement changes when job is signaturized
- Access denied on RFS
- Red stock arrives 3.8.06 DocuSP as white
- Insert oversize pdf file not working 4.1.0.4
- Deskew not working
- PDF Export with Xerox high speed generates a blank page
- Paper stock Medium Weight tabs won't print
- Status bar incorrect during DigiPath Rescue
- Message file does not exist when inserting tiffs
- 2.1 RDO's shift from lower left to upper right
- Special delivery instructions field not populating/visible in View Job Details window
- Custom size image cut off when saving as a PDF using the Xerox High Speed Process
- Migrated RDO Printer family shows 1.4J after migration
- Text insertion during PDF editing causes an error
- Disappearing files from RFS cabinets
- Quick Print Command Line does not apply a job name written in a specified Job Ticket.
- Poor quality importing RDO into PREPS
- Some files residing on a network drive leave large temp files behind when doing a Save As PDF

DigiPath 4.1.0.8 Patch

The following fixes, previously reported with DigiPath 4.1.0.8, are also included in DigiPath SPAR patch 4.1.0.9:

- Unable to staple more than 70 sheets to Nuvera
- DSMR: Importing a PostScript file without file extension of .ps fails
- 8.5x11 images shift to right when scanning in after inserted tab
- Impossible to program a job ticket with stapling on A3 paper
- A job created in any application on a page size of 11x17 when printed through the DocuSP to be saved to the digipath queue and sent to the DigiPath via Network Agent will appear in Document Scan and Makeready as 8.5x11.
- Regression problem migrating remote cabinets from 2.1 to 4.1
- Document property does not update with the new values
- DigiPath print to Coloursplitter problem
- Can't select [Display and print page numbers] option properly for a portion of the pages
- Scan Tool settings do not hold if user is not logged in as DPAdmin
- Uncompressed TIFF images don't get compressed by the file import with optimization

DigiPath 4.1.0.7 Patch

The following fixes, previously reported with DigiPath 4.1.0.7, are also included in DigiPath SPAR patch 4.1.0.9:

- An error message occurs when modifying an image by using image editor from DigiPath
- Poor image quality of thumbnails
- Inserting text into a PDF page destroys the page image

- Colorize Fills are shifted a little on an exported PDF.
- Low performance when printing B/W A3 images with optimizing
- Dragging an object on the view window doesn't scroll viewing area
- Custom size stocks that PPP printer does not support are reset to US letter automatically without notification to users
- Can't reset position of multiple images with different positions to 0.
- When renaming a RDO file by File Manager without inputting file extension, a RDO file isn't renamed with error and [Rename] dialog closes
- An error message box of FireStar TWAIN driver doesn't close
- Responds are slow to search of main collection
- Unable to edit image after using "fit in" option to scale an image down
- Network agent file forwarding as individual files instead of complete rdo
- An error 0047-127 when attempting to open network agent rdo
- Insert text issue w/ 9x11 stock
- Oracle error on start up
- Remote cabinet restore failed
- Error occurs when scanning custom size document
- Rotated pages after printing rdo
- Document Centre 432 network agent not building rdo correctly
- Scan and Print errors with the deskew option selected
- Unable to edit image larger than 8.5x11, received DSMR error
- Rounding of x/y coordinates in job setup inconsistent
- Cover tab not available in Quick Print as well a Document Scan and Makeready window for DocuPrint 135 EPS Printer
- Intermittent page rotation
- Opening and printing old Rod's from 1.2 or 2.1 causes highlight color error message
- 2up flip left shifts when saving as PDF using Xerox High Speed
- Linked Documents not giving message when link is missing
- Red arrow indicating displayed page doesn't move correctly when selecting pages in a reverse

EXPIRATION:

next revision of 4.1 software.
