Title: Stand Alone Quick Print Application for DigiPath Software

ANNOUNCEMENT

We are pleased to announce that effective December 1, 2003; Xerox will offer a Stand Alone Quick Print option for DigiPath software. The Stand Alone Quick Print application is a full-featured print utility that allows the comprehensive programming of printing attributes for a broad array of Xerox Production Printing and Publishing devices. The Stand Alone utility may now be installed and executed on Windows XP Professional PC platforms other than those supplied with the DigiPath Production Software offering. This capability provides our customers the flexibility to access print ready jobs such as Postscript®, Encapsulated Postscript®, PDF, TIFF, HP/PCL, ASCII and RDO (All DigiPath formats supported). Extensive job programming is made available through a tabular format for easy access to the various document attributes available for printer programming.

Users of the Stand Alone Quick Print application will have the same functionality as DigiPath users to program basic printing features, selective page programming, notes and special instructions, page inserts, covers, image quality adjustments, full Xerox Job Ticketing, and much more. The selected printer determines the extensibility of the printer features displayed. Further benefits of the Stand Alone Quick Print application include the ability to concatenate jobs together to form a single job with a single job ticket or multiple jobs with like printing attributes for each job. Mix jobs of varying print ready formats may also be concatenated in this fashion.

The Stand Alone Quick Print application also will provide a method to access print ready files and submit them as a single document for printing by simply identifying the Windows File Folder that hold the files. The application will submit each file in alphanumeric file order for printing. Several file filters are available to assist the user selecting the print ready files from the Windows file system.

System requirements for Standalone Quick Print

The minimum system requirements for Standalone Quick Print are as follows:

- Windows XP Professional operating system
- 733 MHZ CPU
- Minimum of 256 MB RAM
- 200 MB of free hard drive space for application installation
- Free hard drive space for application use

Note: The space required for application use is dependent on the size of the jobs.

Order Process
