Trademarks

EFI, the EFI logo, Fiery, the Fiery logo, Fiery Driven, the Fiery Driven logo, EFICOLOR, ColorWise, and Rip-While-Print are trademarks registered in the U.S. Patent and Trademark Office. Fiery Z4, Fiery X4, Command WorkStation, AutoCal, Starr Compression, Memory Multiplier, NetWise, and VisualCal are trademarks of Electronics For Imaging, Inc.

All Xerox product names mentioned in this publication are trademarks of the XEROX CORPORATION.

Adobe, the Adobe logo, Adobe Illustrator, PostScript, Adobe Photoshop, Adobe Separator, and Adobe PageMaker are trademarks of Adobe Systems Incorporated, registered in certain jurisdictions. EPS (Encapsulated PostScript) is a trademark of Altsys Corporation. Apple, the Apple logo, AppleShare, AppleTalk, EtherTalk, LaserWriter, and Macintosh are registered trademarks, and MultiFinder is a trademark of Apple Computer, Inc. Microsoft, MS, MS-DOS, and Windows are registered trademarks of Microsoft in the US and other countries. QuarkXPress is a registered trademark of Quark, Inc. Times, Helvetica, and Palatino are trademarks of Linotype AG and/or its subsidiaries. ITC Avant Garde, ITC Bookman, ITC Zapf Chancery, and ITC Zapf Dingbats are registered trademarks of International Typeface Corporation. Ethernet is a registered trademark of Xerox Corporation. UNIX is a registered trademark of UNIX System Laboratories, a wholly owned subsidiary of Novell, Inc. PANTONE is a registered trademark of Pantone, Inc. Matchprint is a trademark of Imation Corp.

All other terms and product names may be trademarks or registered trademarks of their respective owners, and are hereby acknowledged.

Legal Notices

APPLE COMPUTER, INC. ("APPLE") MAKES NO WARRANTIES, EXPRESS OR IMPLIED, INCLUDING WITHOUT LIMITATION THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE, REGARDING THE APPLE SOFTWARE. APPLE DOES NOT WARRANT, GUARANTEE, OR MAKE ANY REPRESENTATIONS REGARDING THE USE OR THE RESULTS OF THE USE OF THE APPLE SOFTWARE IN TERMS OF ITS CORRECTNESS, ACCURACY, RELIABILITY, CURRENTNESS, OR OTHERWISE. THE ENTIRE RISK AS TO THE RESULTS AND PERFORMANCE OF THE APPLE SOFTWARE IS ASSUMED BY YOU. THE EXCLUSION OF IMPLIED WARRANTIES IS NOT PERMITTED BY SOME STATES. THE ABOVE EXCLUSION MAY NOT APPLY TO YOU.

IN NO EVENT WILL APPLE, ITS DIRECTORS, OFFICERS, EMPLOYEES OR AGENTS BE LIABLE TO YOU FOR ANY CONSEQUENTIAL, INCIDENTAL OR INDIRECT DAMAGES (INCLUDING DAMAGES FOR LOSS OF BUSINESS PROFITS, BUSINESS INTERRUPTION, LOSS OF BUSINESS INFORMATION, AND THE LIKE) ARISING OUT OF THE USE OR INABILITY TO USE THE APPLE SOFTWARE EVEN IF APPLE HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES. BECAUSE SOME STATES DO NOT ALLOW THE EXCLUSION OR LIMITATION OF LIABILITY FOR CONSEQUENTIAL OR INCIDENTAL DAMAGES, THE ABOVE LIMITATIONS MAY NOT APPLY TO YOU. Apple's liability to you for actual damages from any cause whatsoever, and regardless of the form of the action (whether in contract, tort [including negligence], product liability or otherwise), will be limited to \$50.

Restricted Rights Legends

For defense agencies: Restricted Rights Legend. Use, reproduction, or disclosure is subject to restrictions set forth in subparagraph (c)(1)(ii) of the Rights in Technical Data and Computer Software clause at 252.227.7013.

For civilian agencies: Restricted Rights Legend. Use, reproduction, or disclosure is subject to restrictions set forth in subparagraph (a) through (d) of the commercial Computer Software Restricted Rights clause at 52.227-19 and the limitations set forth in Electronics For Imaging, Inc.'s standard commercial agreement for this software. Unpublished rights reserved under the copyright laws of the United States.

Printed in the United States of America on recycled paper.

Part Number: n/a

CE Mark

The CE marking applied to this product symbolises Rank Xerox's declaration of conformity with the following applicable directives of the European Union as of the dates indicated.

January 1, 1996—Council Directive 70/80/CCO amended by Council Directive 93/68/EEO. Approximation of the laws of the member states related to low voltage equipment.

January 1, 1996—Council Directive 59/336/EEC. Approximation of the laws of the member states related to electromagnetic compatibility.

A full declaration defining the relevant directives and referenced standards can be obtained from your Rank Xerox representative.

WARNING: In order to allow this equipment to operate in proximity to industrial, scientific, and Medical (ISM) equipment, the external radiation from ISM equipment may have to be limited or special migration measures taken.

FCC Information

WARNING: FCC Regulations state that any unauthorized changes or modifications to this equipment not expressly approved by the manufacturer could void the user's authority to operate this equipment.

Class A Compliance

This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, and uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause interference in which case the user will be required to correct the interference at his own expense.

Industry Canada Class A Notice

This Class A digital apparatus complies with Canadian ICES-003.

Avis de Conformation Classe A d l'Industrie Canada

Cet appareil numérique de la Classe A est conforme à la norme NMB-003 du Canada.

Certificate by Manufacturer/Importer

This is to certify that the FC07 is shielded against radio interference in accordance with the provisions of VFG 243/1991. The German Postal Services have been advised that this device is being put on the market and that they have been given the right to inspect the series for compliance with the regulations.

Bescheinigung des Herstellers/Importeurs

Heirmit wird bescheinigt, dass der FC07 im Uebereinstimmung mit den Bestimmungen der VFG 243/1991 Funk-Entstort ist. Der Deutschen Bundespost wurde das Inverkehrbringen dieses Geraetes angezeigt und die Berechtigung zur Ueberpruefung der Serie auf Einhaltung der Bestimmungen eingeraumt.

RFI Compliance Notice

This equipment has been tested concerning compliance with the relevant RFI protection requirements both individually and on system level (to simulate normal operation conditions). However, it is possible that these RFI Requirements are not met under certain unfavorable conditions in other installations. It is the user who is responsible for compliance of his particular installation.

Dieses Geraet wurde einzeln sowohl als auch in einer Anlage, die einen normalen Anwendungsfall nachbildet, auf die Einhaltung der Funk-entstoeerbestimmungen gepueft. Es ist jedoch moeglich, dass die Funk-entstoeerbestimmungen unter unguenstigen Umstaenden bei anderen Geraetekombinationen nicht eingehalten werden. Fuer die Einhaltung der Funk-entstoeerbestimmungen seigner gesamten Anlage, in der dieses Geraet betrieben wird, ist der Betreiber verantwortlich.

Compliance with applicable regulations depends on the use of shielded cables. It is the user who is responsible for procuring the appropriate cables.

Einhaltung mit betreffenden Bestimmungen kommt darauf an, dass geschirmte Ausfuhrungen gebraucht werden. Fuer die beschaffung richtiger Ausfuhrungen ist der Betreiber verantwortlich.

Software License Agreement

Before using the Software, please carefully read the following terms and conditions. BY USING THIS SOFTWARE, YOU SIGNIFY THAT YOU HAVE ACCEPTED THE TERMS OF THIS AGREEMENT. If you cannot or do not accept these terms, you may return the entire package within ten (10) days to the Distributor or Dealer from which you obtained them for a full refund.

Electronics For Imaging, Inc. grants to you a non-exclusive, non-transferable license to use the software and accompanying documentation ("Software") included with the Fiery you have purchased, including without limitation the PostScript software provided by Adobe Systems Incorporated.

You may:

- a. use the Software solely for your own customary business purposes and solely with the Fiery;
- b. use the digitally-encoded machine-readable outline and bitmap programs ("Font Programs") provided with the Fiery in a special encrypted format ("Coded Font Programs") to reproduce and display designs, styles, weights, and versions of letters, numerals, characters and symbols ("Typefaces") solely for your own customary business purposes on the display window of the Fiery or monitor used with the Fiery;
- c. use the trademarks used by Electronics for Imaging to identify the Coded Font Programs and Typefaces reproduced therefrom ("Trademarks"); and
- d. assign your rights under this Agreement to a transferee of all of your right, title and interest in and to the Fiery provided the transferee agrees to be bound by all of the terms and conditions of this Agreement.

You may not:

- a. make use of the Software, directly or indirectly, to print bitmap images with print resolutions of 600 dots per inch or greater, or to generate fonts or typefaces for use other than with the Fiery;
- b. make or have made, or permit to be made, any copies of the Software, Coded Font Programs, accompanying documentation or portions thereof, except as necessary for use with the Fiery unit purchased by you; provided, however, that under no circumstances may you make or have made, or permit to be made, any copies of that certain portion of the Software which has been included on the Fiery hard disk drive. You may not copy the documentation;
- c. attempt to alter, disassemble, decrypt or reverse engineer the Software, Coded Font Programs or accompanying documentation.
- d. rent or lease the Software.

Proprietary Rights

You acknowledge that the Software, Coded Font Programs, Typefaces, Trademarks and accompanying documentation are proprietary to Electronics For Imaging and its suppliers and that title and other intellectual property rights therein remain with Electronics For Imaging and its suppliers. Except as stated above, this Agreement does not grant you any right to patents, copyrights, trade secrets, trademarks (whether registered or unregistered), or any other rights, franchises or licenses in respect of the Software, Coded Font Programs, Typefaces, Trademarks or accompanying documentation. You may not adapt or use any trademark or trade name which is likely to be similar to or confusing with that of Electronics For Imaging or any of its suppliers or take any other action which impairs or reduces the trademark rights of Electronics For Imaging or its suppliers. The trademarks may only be used to identify printed output produced by the Coded Font Programs. At the reasonable request of Electronics For Imaging, you must supply samples of any Typeface identified with a trademark.

Confidentiality

You agree to hold the Software and Coded Font Programs in confidence, disclosing the Software and Coded Font Programs only to authorized users having a need to use the Software and Coded Font Programs as permitted by this Agreement and to take all reasonable precautions to prevent disclosure to other parties.

Remedies

Unauthorized use, copying or disclosure of the Software, Coded Font Programs, Typefaces, Trademarks or accompanying documentation will result in automatic termination of this license and will make available to Electronics For Imaging other legal remedies.

Limited Warranty And Disclaimer

Electronics For Imaging warrants that, for a period of ninety (90) days from the date of delivery to you, the Software under normal use will perform without significant errors that make it unusable. Electronics For Imaging's entire liability and your exclusive remedy under this warranty (which is subject to you returning the Fiery to Electronics For Imaging or an authorized dealer) will be, at Electronics For Imaging's option, to use reasonable commercial efforts to attempt to correct or work around errors, to replace the Software with functionally equivalent software, or to refund the purchase price and terminate this Agreement. Some states do not allow limitations on duration of implied warranty, so the above limitation may not apply to you.

Except for the above express limited warranty, Electronics For Imaging makes and you receive no warranties or conditions on the Products, express, implied, or statutory, and Electronics For Imaging specifically disclaims any implied warranty or condition of merchantability or fitness for a particular purpose.

For warranty service, please contact your authorized service/support center.

EXCEPT FOR THE ABOVE EXPRESS LIMITED WARRANTY, ELECTRONICS FOR IMAGING MAKES AND YOU RECEIVE NO WARRANTIES OR CONDITIONS ON THE SOFTWARE OR CODED FONT PROGRAMS, EXPRESS, IMPLIED, STATUTORY, OR IN ANY OTHER PROVISION OF THIS AGREEMENT OR COMMUNICATION WITH YOU, AND ELECTRONICS FOR IMAGING SPECIFICALLY DISCLAIMS ANY IMPLIED WARRANTY OR CONDITION OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE. Electronics For Imaging does not warrant that the operation of the software will be uninterrupted or error free or that the Software will meet your specific requirements.

Limitation Of Liability

IN NO EVENT WILL ELECTRONICS FOR IMAGING OR ITS SUPPLIERS BE LIABLE FOR ANY DAMAGES, INCLUDING LOSS OF DATA, LOST PROFITS, COST OF COVER OR OTHER SPECIAL, INCIDENTAL, CONSEQUENTIAL OR INDIRECT DAMAGES ARISING FROM THE USE OF THE SOFTWARE, CODED FONT PROGRAMS OR ACCOMPANYING DOCUMENTATION, HOWEVER CAUSED AND ON ANY THEORY OF LIABILITY. THIS LIMITATION WILL APPLY EVEN IF ELECTRONICS FOR IMAGING OR ANY AUTHORIZED DEALER HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGE. YOU ACKNOWLEDGE THAT THE PRICE OF THE UNIT REFLECTS THIS ALLOCATION OF RISK. BECAUSE SOME STATES/JURISDICTIONS DO NOT ALLOW THE EXCLUSION OR LIMITATION OF LIABILITY FOR CONSEQUENTIAL OR INCIDENTAL DAMAGES, THE ABOVE LIMITATION MAY NOT APPLY TO YOU.

Export Controls

You agree that you will not export or re-export the Software or Coded Font Programs in any form without the appropriate United States and foreign government licenses. Your failure to comply with this provision is a material breach of this Agreement.

Government Use

Use, duplication or disclosure of the Software by the United States Government is subject to restrictions as set forth in subdivision (c) (1) (ii) of the Rights in Technical Data and Computer Software clause at DFARS 252.227-7013 or in subparagraphs (c) (1) and (2) of the Commercial Computer Software—Restricted Right Clause at 48 CFR 52.227-19, as applicable.

Third Party Beneficiary

You are hereby notified that Adobe Systems Incorporated, a California corporation located at 345 Park Avenue, San Jose, CA 95110-2704 ("Adobe") is a third-party beneficiary to this Agreement to the extent that this Agreement contains provisions which relate to your use of the Fonts, the Coded Font Programs, the Typefaces and the Trademarks licensed hereby. Such provisions are made expressly for the benefit of Adobe and are enforceable by Adobe in addition to Electronics For Imaging.

General

This Agreement will be governed by the laws of the State of California.

This Agreement is the entire agreement held between us and supersedes any other communications or advertising with respect to the Software, Coded Font Programs and accompanying documentation.

If any provision of this Agreement is held invalid, the remainder of this Agreement shall continue in full force and effect.

If you have any questions concerning this Agreement, please write to Electronics For Imaging, Inc., Attn: Licensing Dept. or see Electronics For Imaging's web site at www.efi.com.

Index

Introduction

This manual describes installing the user software for the Fiery X12/EX12 Color Server™ and setting up printing from Microsoft Windows and Apple Mac OS computers. For information about setting up network servers and clients to use the Fiery Color Server, see the *Configuration Guide*. For general information on using the color copier, your computer, your application software, or your network, see the manuals that accompany those products.

The term “Fiery®” is used in this manual to refer to the Fiery X12 or Fiery EX12 Color Server. The Fiery supports the DocuColor 12 copier. This manual uses the term “copier” to refer to the DocuColor 12.

This icon specifies information, features, or procedures that apply only to the Fiery EX12.

This icon specifies information, features, or procedures that apply only to the Fiery X12.

In procedures, differences are indicated as in the following example:

1. **For the Fiery EX12, in the Printer's box, select Fiery EX12 Color Server PS and click Next.**

For the Fiery X12, in the Printer's box, select Fiery X12 Color Server PS and click Next.

Customer media pack

Your Fiery includes a customer media pack containing:

- System Software CD(s)
- User Software CD
- NT40_SP5 (Windows NT Service Pack 5) CD

NOTE: Windows NT 4.0 users must install Service Pack 5 in order to use the Adobe printer driver version 5.1.2 included on the User Software CD.

- Documentation CD
- Kodak Gray Scale Package
- Quick Start Notes
- Printed *Release Notes*

About the documentation

This manual is part of the set of Fiery documentation, which includes the following manuals for users and system administrators:

- The *Configuration Guide* explains basic configuration and administration of the Fiery for the supported platforms and network environments. It also includes guidelines for setting up UNIX, Windows NT 4.0, and Novell NetWare servers to provide Adobe PostScript printing services to clients.
- *Getting Started* describes how to install software to enable users to print to the Fiery. Specifically, it describes installation of the PostScript printer drivers, printer description files, and other software provided on the User Software CD. It also explains how to connect each user to the network.
- The *Printing Guide* describes the printing features of the Fiery for users who send jobs via remote workstations on the network or via a direct parallel port connection.
- The *Color Guide* provides information on managing the color output of your Fiery. It addresses concepts and issues associated with printing to the Fiery and outlines key workflow scenarios. This manual explains how to calibrate your copier and take advantage of the ColorWise® color management system, as well as features in ColorWise Pro Tools™. In addition, the *Color Guide* offers information on printing from popular Windows and Mac OS applications.
- The *Job Management Guide* explains the functions of the Fiery client utilities, including the Command WorkStation™, and how they can be used to manage jobs. This book is intended for an operator or administrator, or a user with the necessary access privileges, who needs to monitor and manage job flow, and troubleshoot problems that may arise.
- Printed *Release Notes* provide last-minute product information and workarounds for some of the problems you may encounter.

Specifications

EX12

For the EX12:

- 866MHz CPU
- 256MB RAM
- 40GB hard disk drive
- An internal 100MB removable cartridge Iomega Zip drive
- Supports FreeForm™
- Supports DocBuilder Pro™ (available as an option)
- Supports the Fiery Advanced Controller Interface kit which includes a monitor, a keyboard, and mouse (available as an option)

See your Xerox representative for details.

X12

For the Fiery X12:

- 433MHz CPU
- 128MB RAM
- 8.4GB hard disk drive
- An internal floppy disk drive
- Supports FreeForm (available as an option)
- Supports the Fiery Advanced Controller Interface kit which includes a monitor, a keyboard, and mouse (available as an option)

See your Xerox representative for details.

NOTE: Client utilities can be installed onto the Fiery from the User Software CD if the Fiery Advanced Controller Interface is installed. Other applications are not supported and may cause system problems.

For the Fiery EX12 and the Fiery X12:

- An internal CD-ROM drive
- Supports AppleTalk, TCP/IP, and IPX protocols simultaneously
- Supports parallel port communication
- Supports SNAP frame type using both Ethernet and Token Ring ports
- Supports thinnet unshielded twisted pair (Fast Ethernet 100BaseTX or Ethernet 10BaseT)
- Supports Adobe PostScript 3
- Includes 136 fonts (126 Adobe Type 1 PostScript and 10 TrueType)

In addition, two Adobe Multiple Master fonts are included and are used for font substitution in PDF files.

X12

- PCL printing support (for Windows computers)

X12

- Includes 46 PCL fonts
- Built-in ColorWise color management and NetWise™ networking management
- Fiery WebTools™
- ColorWise Pro Tools, Fiery Downloader™, Fiery Link™, and Fiery Spooler™ (Mac OS only) client utilities
- Fiery Scan™ plug in
- Command WorkStation (Windows only) software
- Supports Token Ring networking (available as an option for Fiery X12 only)

User software

The full set of Fiery user software is provided on the User Software CD.

Adobe PostScript Printer Driver	Enables you to print to the Fiery from Windows 95/98, Windows NT 4.0, and Mac OS computers; also supports special Fiery and PostScript 3 features.
PostScript Printer Description file (PPD)	For use with the PostScript printer driver that allows the Fiery to appear in popular applications' Print and Page Setup dialog boxes. The Fiery PPDs provide information about the Fiery and your particular copier model to the application and printer driver you are using.
PostScript Fonts (Mac OS only)	PostScript screen and printer fonts that correspond to the 136 PostScript printer fonts installed on the Fiery (126 Adobe Type 1 and 10 TrueType). See Appendix B of the <i>Printing Guide</i> for a complete list of PostScript and PCL fonts installed on the Fiery.
 PCL Printer Driver	Enables you to print to the Fiery from Windows computers; supports all special Fiery print features.
 PCL PDD file	For use with the PCL printer driver that allows the Fiery to appear in popular applications' Print and Page Setup dialog boxes. The Fiery PDDs provide information about the Fiery and your particular copier model to the application and printer driver you are using.
Fiery Downloader	Enables you to print PostScript files, PCL files, Encapsulated PostScript (EPS) files, and Portable Document Format (PDF) files directly to the Fiery without opening the application in which they were created. Fiery Downloader also enables you to manage the printer fonts installed on the Fiery.

	Fiery Spooler	Enables you to view the order and priority of print jobs, customize printer settings for jobs, delete jobs, and move jobs between queues. You can also use it to view job accounting information.
	ColorWise Pro Tools	ICC-open color management and calibration tools; enables you to edit and download ICC profiles.
	Fiery Scan	Plug-in modules for Photoshop that enable you to scan images from the copier directly into the application.
X12	Fiery Link	Enables you to monitor the status of connected Fiery servers and the print jobs sent to them.
	Command WorkStation software	Enables the operator to control the Fiery functions from Windows 95/98 and Windows NT 4.0 workstations. To use the Command WorkStation, see the <i>Job Management Guide</i> .
	Color management files	ColorSync and ICM color management files that enable you to maintain consistent color from your original artwork to the colors displayed on your monitor to the printed output.
	Color reference files	Reference pages that you can print to view the range of colors available on your Fiery. For the most predictable color results, refer to these pages when defining colors in applications. For more information on color management, see the <i>Color Guide</i> .

Calibration files	Includes measurements files and targets that you can use with ColorWise Pro Tools. If you don't have a densitometer, you can use these files to calibrate the Fiery.
MRJ (Mac OS only)	Mac OS Runtime for Java installer version 2.1.4. MRJ is required by all Java-based Fiery utilities. When installing these utilities, if MRJ is not detected the MRJ installer is automatically launched.

NOTE: The PostScript printer drivers and printer description files can be installed from the User Software CD, or they can be installed from the Fiery with the Installer WebTool. For instructions, see “Using the Installer WebTool” on page 102.

System requirements

To install the Fiery user software on a Windows or Mac OS computer, the computer must be equipped with a built-in or external CD-ROM drive.

Windows

To print to the Fiery, you need:

- A Windows-based computer with an 80486, AMD, or Pentium processor
- Windows 95, Windows 98, or Windows NT 4.0 with NT Service Pack 5
- At least 16MB of RAM

With Microsoft Windows 95/98, you also need:

- IPX/SPX or TCP/IP networking protocol installed
- Adobe PostScript Printer Driver for Windows version 4.2 or later (version 4.3 is included with the user software)

With Microsoft Windows NT 4.0, you also need:

- TCP/IP or AppleTalk networking protocol installed
- Adobe PostScript Printer Driver for Windows NT 4.0 version 5.0 (version 5.1.2 is included with the user software)

To use the Fiery utilities (Fiery Downloader, ColorWise Pro Tools, and Fiery Link) you also need:

- *Either* Windows 95/98 *or* Windows NT 4.0 with NT Service Pack 5
- At least 48MB of RAM; 56MB of RAM is recommended

To use Fiery Scan, you also need Adobe Photoshop version 4.0 or later.

To use Fiery WebTools, you also need:

- *Either* Netscape Communicator v4.5 or later, and Java enabled *or* Microsoft Internet Explorer v4.0.1 and SP1, or later, with Java enabled

NOTE: Netscape and Microsoft continue to release frequent updates to their browsers. As support cannot be guaranteed for all versions, use the versions specified above for best results.

- A monitor, and video memory that supports 16-bit color at a minimum resolution of 800 x 600
- A TCP/IP-enabled network and the IP address or DNS name of the Fiery
- Web Services enabled on the Fiery

Mac OS

To print to the Fiery you need:

- A Mac OS-based computer
- At least 16MB of RAM
- EtherTalk installed
- Apple System software version 8.0, or later
- Adobe PostScript Printer Driver version 8.5 or later (version 8.6 is included with the user software)

To use the Fiery utilities (Fiery Downloader, ColorWise Pro Tools, Fiery Link, and Fiery Spooler), you also need:

- A Power Macintosh computer
- At least 48MB of RAM; 56MB of RAM is recommended

To use Fiery Scan, you also need Adobe Photoshop version 4.0 or later.

To use Fiery WebTools, you also need:

- Netscape Communicator v4.5 or later, with Java enabled, or Internet Explorer v4.0.1 or later, with Java enabled

NOTE: Netscape continues to release frequent updates to its browser. As support cannot be guaranteed for all versions, use the version specified above for best results.

- A monitor and video memory that supports 16-bit color at a minimum resolution of 800 x 600
- A TCP/IP-enabled network and the IP address or DNS name of the Fiery
- Web Services enabled on the Fiery

UNIX (TCP/IP)

To print to the Fiery with a UNIX workstation, you need:

- A workstation with standard TCP/IP connectivity (for example, Sun SPARCStation or Silicon Graphics workstation with Solaris version 2.x or 7.x, or SunOS version 4.1.x software)
- TCP/IP printing software that conforms to RFC1179 (Berkeley lpd protocol)

Parallel port

To print to the Fiery using the parallel port, you need:

- A Windows computer with an 80486, AMD, or Pentium processor
- At least 16MB of RAM
- The parallel cable included with the Fiery

The cable has a DB-25 male connector (that connects to the computer) on one end and a DB-25 female connector (that connects to the Fiery) on the other.

IPX (Novell)

To use the Fiery with an IPX (Novell) network, you need:

- A Novell server
- Novell NetWare software version 3.x or 4.x
- Support for Ethernet SNAP, Ethernet II, Ethernet 802.3, Ethernet 802.2, Token Ring SNAP, or Token Ring

Command WorkStation

To run the Command WorkStation application from a remote workstation, you need:

- A Windows-based computer with a 200MHz Pentium processor
- Windows 95/98 or Windows NT 4.0 with NT Service Pack 5
- TCP/IP networking protocol installed
- A video adapter card with at least 2MB of video memory
- At least 32MB of RAM
- An 850MB (or greater) hard disk drive
- A 2x CD-ROM drive
- A 17" monitor that supports 16-bit color at a minimum resolution of 1024 x 768

Installing User Software on a Windows Computer

This chapter describes installing software and setting up printing from a Windows-based computer running Windows 95/98 or Windows NT 4.0.

The general steps for installing the software are:

- Install the PostScript printer driver or PCL printer driver (Windows 95/98 and Windows NT 4.0) and corresponding printer driver files
- Set up the printer driver to communicate with the Fiery
- Install the Command WorkStation software
- Install the Fiery utilities and the Fiery Scan plug-in
- Configure the connection for Fiery Link, Fiery Downloader, ColorWise Pro Tools, Fiery Scan, and the Command WorkStation
- Copy additional files from the User Software CD, as needed

In addition to using the User Software CD, you can download printer drivers and the Fiery Link installer from the Fiery with the Installer WebTool (if the site administrator has enabled Internet access to the Fiery). For instructions, see “Using the Installer WebTool” on page 102. Once you download the printer files, the installation process is identical to installing from the User Software CD.

Setting up PostScript and/or PCL printing with Windows 95/98

To set up the Fiery as a PostScript or PCL printer, you must install the PostScript or PCL printer driver for Windows 95/98 and its corresponding printer description files. You must also configure a particular type of print connection between the workstation and the Fiery. If you are printing over a network, you will need to configure a network connection; if you are printing directly to the printer you will need to configure a parallel port connection.

The procedure below describes installing the printer drivers from the User Software CD or from the Installer WebTool. The procedures after that describe setting up the print connection.

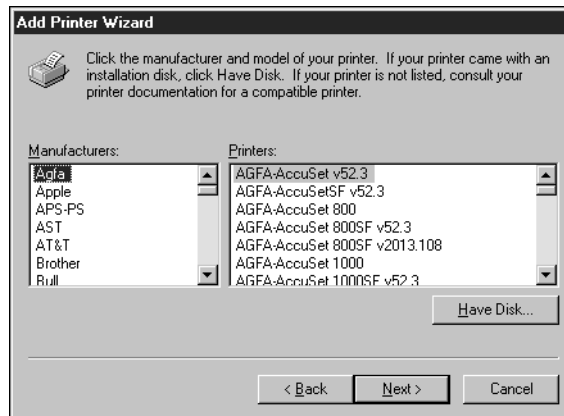

If you are printing using SMB (Server Message Block) you can connect to the Fiery and install the printer drivers in a single procedure. To configure the Fiery for SMB printing, see “Setting up SMB printing on Windows 95/98” on page 19.

TO INSTALL THE POSTSCRIPT OR PCL PRINTER DRIVER FOR WINDOWS 95/98:

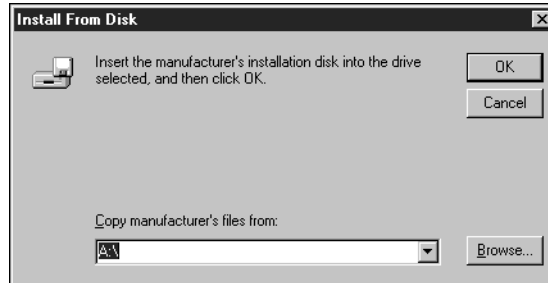

1. Click Start, choose Settings, and then choose Printers to display the Printers window.
2. Double-click the Add Printer icon and click Next.
3. Specify printing using a Local printer and click Next.

This procedure describes installing a printer locally. You can modify the connection later, according to your network type.

4. In the dialog box displaying lists of manufacturers and printers, click Have Disk.

The Install from Disk dialog box prompts you for the disk.

5. If you are installing from the CD, type the name of the CD-ROM drive (for example, D:\) and click Browse. Browse to English\Prntdrv.

If you are installing from the files you downloaded using the Installer, browse to Prntdrv.

Make sure “Oemsetup.inf” is selected.

6. Click OK.

The path is copied to the Install From Disk dialog box.

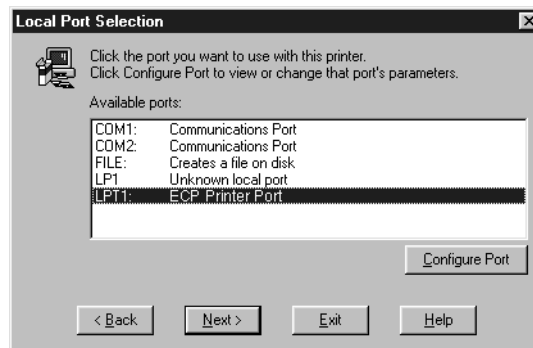

7. Verify the path is correct and click OK.

8. In the Printers box, select the Fiery X12/EX12 Color Server PS or PCL file and click Next.

9. In the Available ports box, select the LPT1 port and click Next.

You will configure the port later, according to your network type.

10. Using a maximum of 31 characters, enter a name for the Fiery (or leave the default name) in the Printer Name box.

This name will be used in the Printers and queue windows.

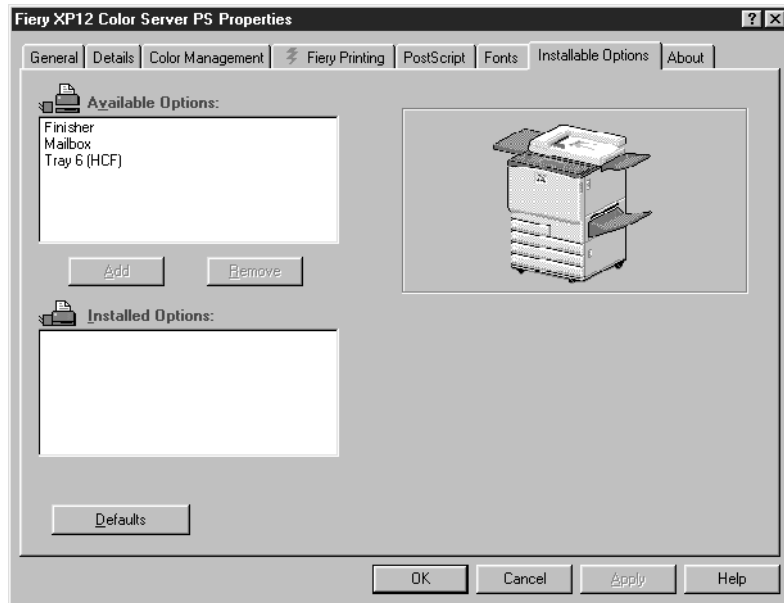

NOTE: Entering more than 31 characters may cause printing problems with some network applications.

11. If you want the Fiery to be the default printer, select Yes; if not, select No. Click Next (Windows 98 only).
12. Select No to printing the test page and click Next (Windows 95) or Finish (Windows 98).

The necessary files are installed to your hard disk. When installation is complete, you will need to configure the options installed on your copier.

**TO CONFIGURE INSTALLABLE OPTIONS ON THE COPIER
FROM THE POSTSCRIPT PRINTER DRIVER:**

1. Click the Start button, choose Settings, and then choose Printers.
2. Click the Fiery icon and choose Properties from the File menu.
3. Select the Installable Options tab.
4. To configure the Fiery EX12 Color Server PS printer driver, select an installed option from the Available Options list and click Add to move the option to the Installed Options list.

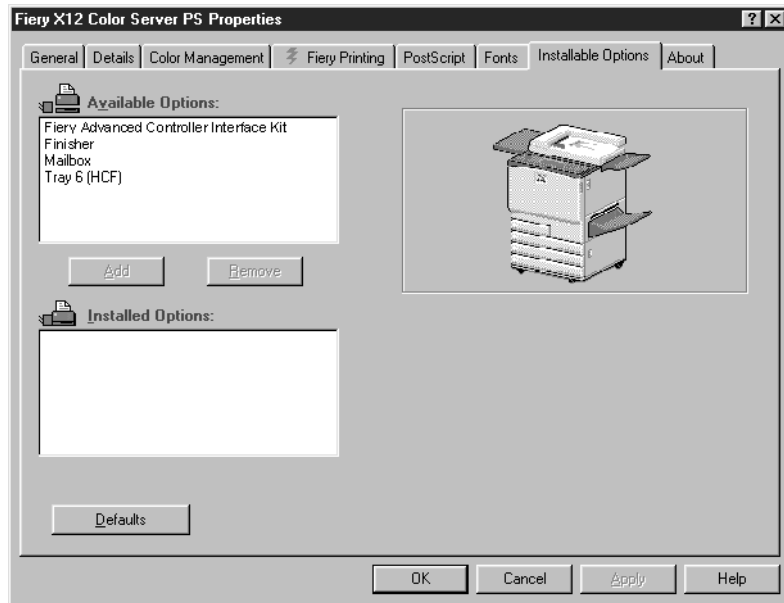

Finisher—Select if a Finisher is installed.

Mailbox—Select if an optional Mailbox is installed.

Tray 6 (HCF)—Select if an optional Tray 6 High Capacity Feeder (HCF) is installed.

To configure the Fiery X12 Color Server PS printer driver, select an installed option from the Available Options list, and click Add to move the option to the Installed Options list.

Fiery Advanced Controller Interface Kit—Select if FreeForm is installed.

Finisher—Select if a Finisher is installed.

Mailbox—Select if a Mailbox is installed.

Tray 6 (HCF)—Select if an optional Tray 6 High Capacity Feeder (HCF) is installed.

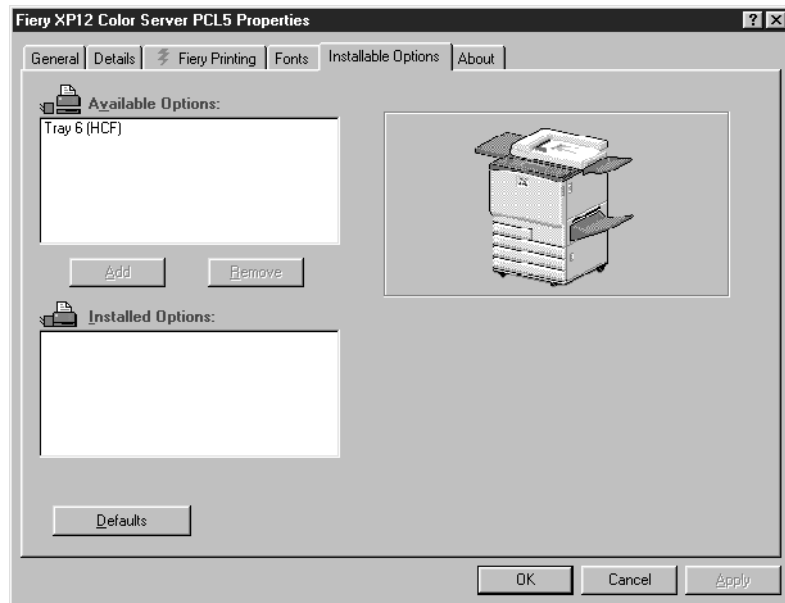

5. Click **Apply**.

6. Click **OK**.

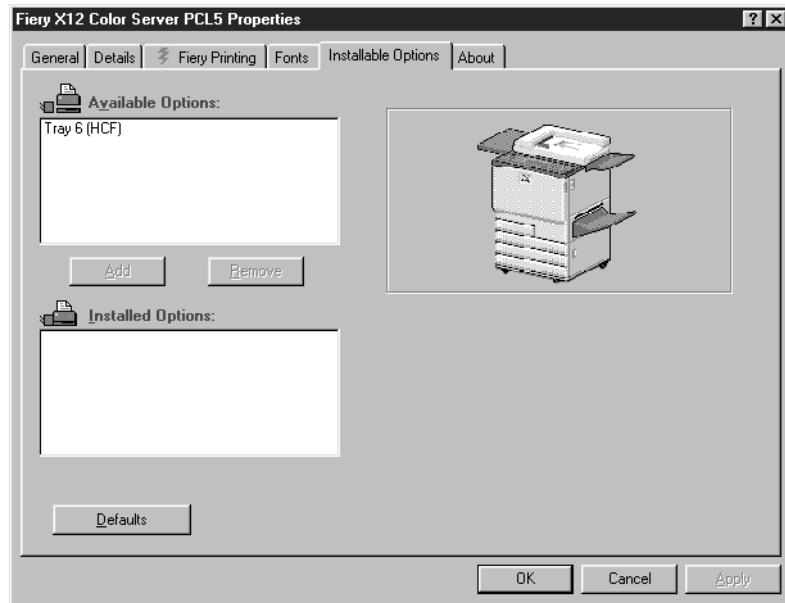

**TO CONFIGURE INSTALLABLE OPTIONS ON THE COPIER
FROM THE PCL PRINTER DRIVER:**

1. Click the Start button, choose Settings, and then choose Printers.
2. Right-click the Fiery EX12 Color Server PCL or the Fiery X12 Color Server PCL printer driver icon, and choose Properties.
3. Select the Installable Options tab.
4. To configure the Fiery EX12 Color Server PCL printer driver, select an installed option from the Available Options list and click Add to move the option to the Installed Options list.

Tray 6 (HCF)—Select if an optional Tray 6 (HCF) is installed.

To configure the Fiery X12 Color Server PCL printer driver, select an installed option from the Available Options list and click Add to move the option to the Installed Options list.

Tray 6 (HCF)—Select if an optional Tray 6 (HCF) is installed.

5. Click **Apply**.
6. Click **OK**.

You are ready for the instructions for connecting to your network type (see "Completing the Windows 95/98 connection").

Completing the Windows 95/98 connection

To print from Windows 95/98 you need to:

- Set up network servers, if any
- Set up the Fiery to accept print jobs from your computer
- Configure a port on each Windows computer for the network

Completing the Windows 95/98 parallel port connection

Preparing a parallel port connection for Windows 95/98 requires specific BIOS settings on your computer, and specific port and printer settings for Windows 95/98. In addition, a change to one of the Fiery Setup settings may be required if you choose to spool files to the Fiery rather than print directly.

TO PREPARE THE FIERY AND YOUR COMPUTER FOR PARALLEL PORT PRINTING:

1. **Connect the Fiery to the parallel port on your computer.**

For instructions, see the *Configuration Guide*.

2. **In Network Setup>Port Setup>Parallel Port Setup, set Enable Parallel Port to Yes.**

For more information about Fiery Setup, see the *Configuration Guide*.

3. **If you want to spool files to the Fiery, set Port Timeout in Seconds to 10.
If you want to print directly to the Fiery, set Port Timeout in Seconds to 5.**

Setting this option to 10 seconds ensures that spooling is not interrupted due to timeout.

4. **In your computer's BIOS settings, set Parallel Port Mode to ECP.**

To access the BIOS settings, restart the computer and press the key indicated on your monitor as soon as the computer starts up. You may have to scroll through several screens to reach the parallel port settings. After setting the Parallel Port Mode to ECP, save your changed setting and exit.

TO PREPARE THE PRINTER FOR PARALLEL PORT PRINTING:

1. **Click the Start button, point to Settings, and click Printers.**
2. **Click the Fiery printer icon and choose Properties from the File menu.**
3. **Click the Details tab, and in the "Print to the following port" menu, select LPT 1: (ECP Printer Port).**

NOTE: Check this selection carefully. It may read LPT 1: (Printer Port), which is *not* equivalent to LPT 1: (ECP Printer Port).

If this box does *not* read LPT 1: (ECP Printer Port), change the port setting now, as described in "To prepare the port for parallel port printing" on page 12, and then return to this procedure. You may need your Windows 95/98 system CD.

4. **If you changed the selection in the "Print to the following port" menu, click Apply.**

A Warning dialog box may appear, stating that fonts you downloaded to the previously selected port may be lost; click OK.

5. Click Spool Settings.

6. Select either “Spool print jobs so program finishes printing faster” or “Print directly to the printer.”

The selection you make depends on the action you took in step 3 on page 10:

- If you set the Port Timeout in Seconds to 10, you can select either option; however, spooling is faster.
- If you set the Port Timeout in Seconds to 5, select “Print directly to the printer.”

7. Select “Disable bi-directional support for this printer” and click OK.

8. Click Apply.

You are now ready to print from your applications to the Fiery with the parallel port.

9. Click the General tab.

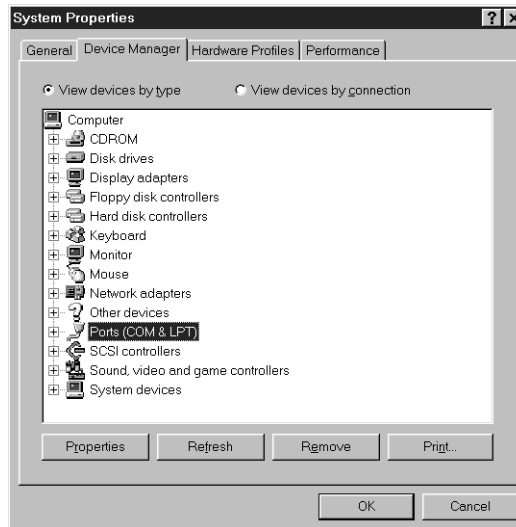

10. Click Print Test Page and click OK.

If the test page prints successfully, you are ready to print from the computer.

Perform the following procedure in Windows 95 only if the LPT 1 port is *not* currently set to ECP Printer Port.

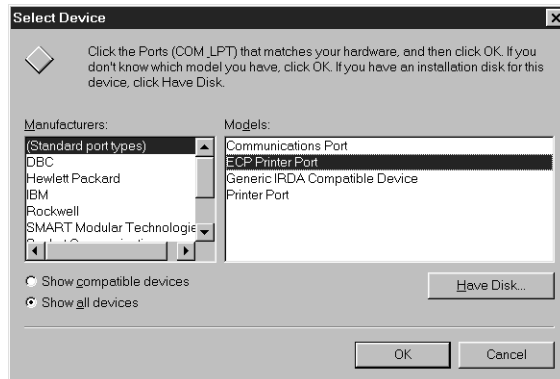

TO PREPARE THE PORT FOR PARALLEL PORT PRINTING IN WINDOWS 95:

1. Click the Start button, choose Settings, and then choose Control Panel.
2. Double-click System.
The System Properties window appears.
3. Click the Device Manager tab.
4. Double-click Ports.

5. Double-click the port with (LPT1) in its name.
6. In the (LPT1) Properties dialog box, click the Driver tab and then click Change Driver.
7. Select Show all devices.

8. From the Manufacturers list, select “(Standard port types).” From the Models list, select “ECP Printer Port” (*not* Printer Port). Click OK.

9. Click OK in the (LPT1) Properties dialog box.

NOTE: You might need to insert the Windows 95 system CD to complete this step, depending on whether the required files are on your hard disk.

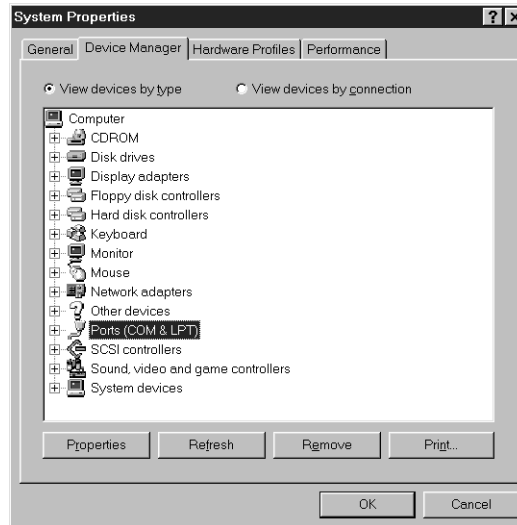

10. When prompted to restart the computer, click Yes.

After Windows 95 restarts, you can complete the procedure described in “To prepare the printer for parallel port printing” on page 10.

Perform the following procedure in Windows 98 only if the LPT1 port is not currently set to ECP Printer Port.

TO PREPARE THE PORT FOR PARALLEL PORT PRINTING IN WINDOWS 98:

1. Click the Start button, choose Settings, and then choose Control Panel.
2. Double-click System.
The System Properties window appears.
3. Click the Device Manager tab.

4. Double-click Ports.**5. Double-click the port with LPT1 in its name.****6. In the (LPT1) Properties dialog box, click the Driver tab, and then click Update Driver.**

The Update Device Driver Wizard appears.

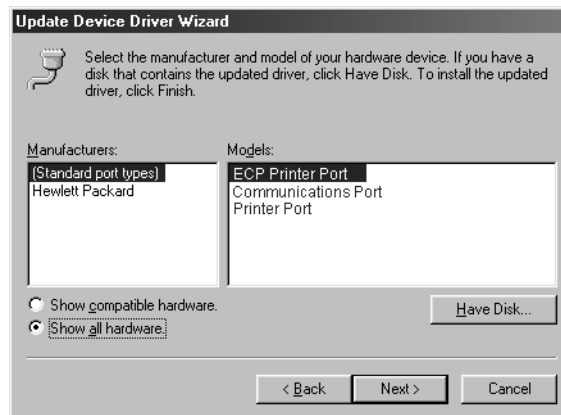

7. Click Next.

8. Choose “Display a list of all the drivers in a specific location, so you can select the driver you want,” and then click Next.

9. Select “Show all hardware.”

10. From the Manufacturers list, select “(Standard port types).” From the Models list, select “ECP Printer Port” (*not* Printer Port). Click Next.

11. **Click Yes in the Update Driver Warning dialog box.**
12. **Click Next.**
Some files are copied.
13. **Click Finish, then close the Printer Port Properties and System Properties dialog boxes.**
You must restart your computer in order to activate the new settings. After Windows 98 restarts, you can complete the procedure described in “To prepare the printer for parallel port printing:” on page 10.

Completing the Windows 95/98 IPX/SPX or IPX (Novell) connection

If you are printing through a Novell server, the Novell network and file server should be set up before you begin. The file server should be configured with a print server and print connection for the Fiery. For details, see your NetWare documentation and the *Configuration Guide*.

To print from Windows 95/98 computers over IPX (Novell), you must first set up IPX/SPX protocols, and then configure the Fiery by choosing the IPX port type and entering the settings for the port you use.

TO SET UP IPX/SPX PRINTING:

1. **Click the Start button, choose Settings, and then choose Control Panel.**
2. **Double-click the Network icon.**
Make sure IPX/SPX-compatible Protocol is listed in the Installed Network Components section.
For instructions, see your Windows 95/98 documentation.

3. Double-click the IPX/SPX-compatible Protocol icon.

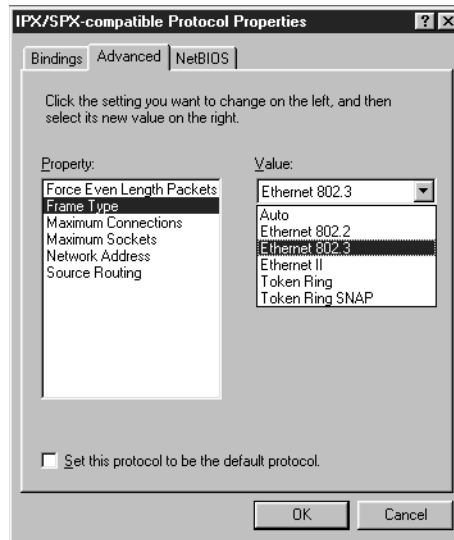

4. Click the Advanced tab.

5. In the Property list, click Frame Type. In the Value pop-up menu, select the Frame Type that corresponds to the one set during Fiery Network Setup.

If necessary, print the Configuration page from the Control Panel to check which Frame Type(s) are configured.

NOTE: Do not select Auto. Doing so may not select the Frame Type specified on the Fiery.

6. Click OK and close the Network Control Panel.
7. When prompted to restart your computer, click Yes.

TO SET UP IPX (NOVELL) PRINTING WITH WINDOWS 95/98:

1. Click the Start button, choose Settings, and then choose Printers.
2. Click the Fiery printer icon and choose Properties from the File menu.
3. Click the Details tab and click Add Port.
A list of connection options is displayed.
4. In the Add Port dialog box, specify the network path, or click Browse for a display of your network environment.

5. **If you are using a NetWare file server, double-click the icon of the NetWare file server you want to use for printing to the Fiery.**
6. **Click the printer icon labeled with the NetWare print queue you will use and click OK.**
7. **In the Add Port dialog box, verify that the network path is updated and click OK.**
 Your print jobs are transmitted to the specified print queue on the Novell file server. The Fiery polls the file server, and if jobs are present, they are transmitted to the Fiery. To confirm the connection, print a Windows 95/98 test page.
8. **Click the General tab, click Apply, and click Print Test Page.**

If the test page prints successfully, you are ready to print from the computer.

Setting up SMB printing on Windows 95/98

If you don't have a Novell network, you can print via SMB printing (also known as Windows printing or WINS printing). Printing by this method allows you to install the PostScript or PCL printer driver and printer description files, and print from your computer to a particular connection (Hold, Print, or Direct) on the Fiery. These instructions assume you have the TCP/IP protocol and Client for Microsoft Networks installed.

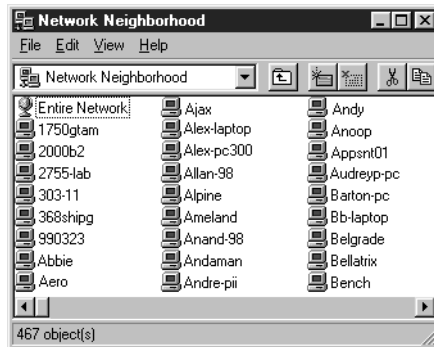

To set up printing to a second or third print connection, you must install a new printer driver and PPD or PDD file. Repeat the procedure "To set up SMB printing on Windows 95/98:" on page 20. If you install more than one printer, give each a descriptive name during printer driver installation, such as Aero-Print or Aero-Hold, so you can easily identify printers.

BEFORE YOU BEGIN:

1. **Configure the Fiery for SMB printing in Network Setup>Service Setup>Windows Setup.**
 SMB printing is referred to as Windows Printing in Setup, on the Control Panel Map, and on the Configuration page. For more information, see the *Configuration Guide*.
2. **Specify whether to install the PS or PCL printer driver using Point and Print in Network Setup>Service Setup>Windows Setup>Point and Print Drivers.**

TO SET UP SMB PRINTING ON WINDOWS 95/98:

1. Double-click the Network Neighborhood icon to display your network environment.

2. Browse for the printer you would like to print to.

The printer name you are browsing for is the name entered in Network Setup>Service Setup>Windows Setup>Server Name. Refer to the Configuration page for this information.

If you are not able to locate your Fiery, see your network administrator.

3. Double-click the name of the printer to display enabled print connections.

4. Double-click the name of the connection you want to print to.

The Printers dialog box appears, asking whether you would like to set up the printer.

5. Select Yes to install the PostScript or PCL printer driver and printer description file for the selected connection.

Depending on the Point and Print Drivers option specified in Network Setup, the PostScript or the PCL printer driver and printer driver files are automatically installed.

The Add Printer Wizard appears.

6. Specify whether you print from MS-DOS based programs, and then click Next.

If you choose Yes, you will be prompted to capture a printer port before proceeding with the installation. See your Windows documentation for details.

7. Using a maximum of 31 characters, enter a name for the Fiery (or leave the default name) in the Printer name box, and choose whether you want the Fiery to be your default printer. Click Next.

NOTE: Entering more than 31 characters may cause printing problems with some network applications.

8. You are asked if you would like to print a test page. Choose Yes and click Finish.

The necessary files are installed to your hard disk.

If the test page prints successfully, you are ready to print from the computer.

Setting up PostScript and/or PCL printing with Windows NT 4.0

To set up the Fiery as a PostScript or PCL printer, you must install the PostScript or PCL Printer Driver for Windows NT 4.0 and its corresponding printer description files. You must also configure a particular type of print connection between the workstation and the Fiery. If you are printing over a network, you will need to configure a network connection; if you are printing directly to the printer you will need to configure a parallel port connection.

The instructions below describe installing a printer locally. Adding a printer to a local system requires that you log in to your local Windows NT workstation (not the network server domain) and that you are a member of the Administrators group. The

procedure for adding a network printer is similar to adding a port. This procedure is described in “Completing the Windows NT 4.0 TCP/IP and LPR connection” on page 33.

The procedure below describes installing the printer drivers from the User Software CD. This procedure can also be used if you have downloaded the printer files using the Installer WebTool. The procedures that follow describe setting up the print connection.

If you are printing using SMB (Server Message Block) you can connect to the Fiery and install the printer drivers in a single procedure. To configure the Fiery for SMB printing, see “Setting up SMB printing on Windows NT 4.0” on page 38.

TO INSTALL THE POSTSCRIPT OR PCL PRINTER DRIVER FOR WINDOWS NT 4.0:

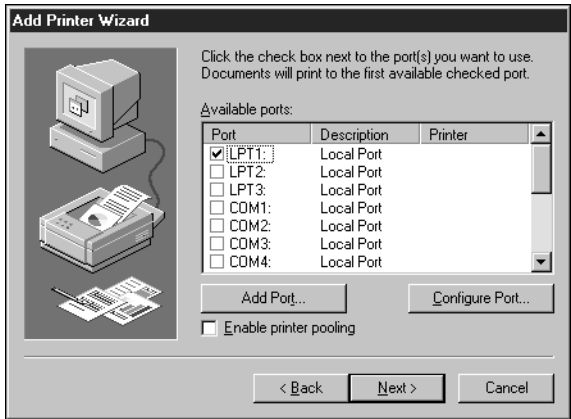

1. If you are installing from the CD, insert it into the CD-ROM drive.
2. Click Start in the Windows NT 4.0 taskbar, choose Settings, and then choose Printers.
3. Double-click Add Printer.
4. To install a printer locally, select My Computer and click Next.

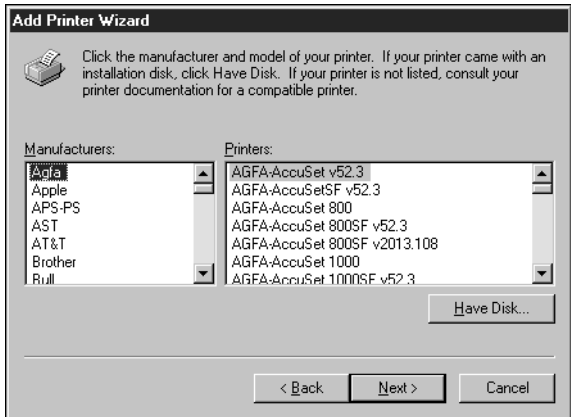

“My Computer” is available if you logged in to a computer on which you have Administrator privileges. If it is not available, you can add a network printer. The procedure is similar to adding a port (see page 34).

5. **Check LPT1: and click Next.**

This is a general installation that works for the parallel port connection. You can add a network port later, according to your network type.

6. **In the dialog box displaying lists of manufacturers and printers, click Have Disk.**

The Install from Disk dialog box prompts you for the disk.

7. If you are installing from the CD, type the name of the CD-ROM drive (for example, D:\) and click Browse.

If you are installing from files you downloaded using the Installer WebTool, type the name of your hard disk drive (for example, C:\) and click Browse.

8. If you are installing from the CD, browse to the English\Prntdrv folder and click Open.

If you are installing from files you downloaded using the Installer WebTool, browse to the Prntdrv folder and click Open.

Make sure "Oemsetup.inf" or "Oemsetup" is selected.

The path is copied to the Install from Disk dialog box.

9. Verify the path is correct and click OK.

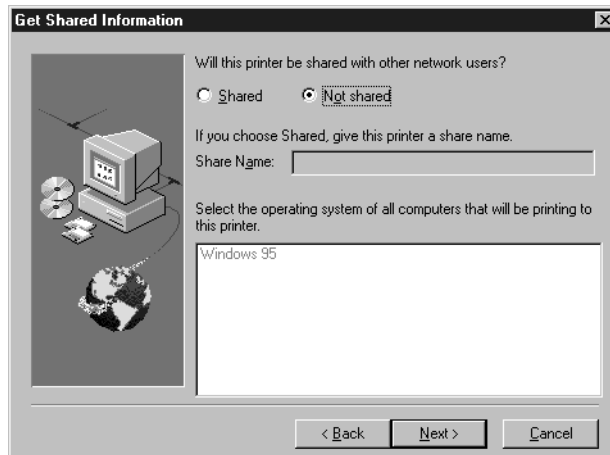

10. In the Printers box, select the Fiery X12/EX12 Color Server PS or PCL file and click Next.

11. Using a maximum of 31 characters, enter a name for the Fiery (or leave the default name) in the Printer name box, and choose whether you want the Fiery to be your default printer. Click Next.

NOTE: Entering more than 31 characters may cause printing problems with some network applications.

12. Indicate whether you want the printer installed as a shared printer. Click Next.

If you select Shared, you must also enter a Share Name for the printer (or leave the default name) and make selections from the list of operating systems used by client workstations. For information on shared printers, see the *Configuration Guide*.

13. Click **No** in the next dialog box to postpone printing a test page, and click **Finish**.

When installation is complete, the Printers window appears with an icon for the newly installed printer.

TO CONFIGURE INSTALLABLE OPTIONS ON THE FIERY FROM THE POSTSCRIPT PRINTER DRIVER:

1. Click the **Start** button, choose **Settings**, and then choose **Printers**.
2. Click the **Fiery** icon and choose **Properties** from the **File** menu.
3. To configure the **Fiery EX12 Color Server PS** printer driver, select the **Device Settings** tab. Scroll down to **Installable Options**.

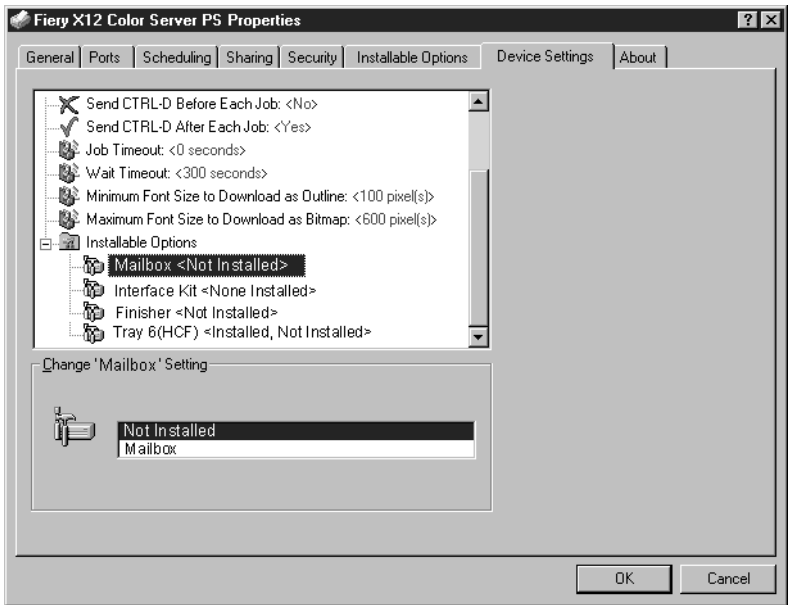

Select an installable option and choose a setting.

Mailbox—Not Installed, Mailbox

Tray 6 (HCF)—Not Installed, Tray 6 High Capacity Feeder (HCF)

Finisher—Not Installed, Finisher

To configure the Fiery X12 Color Server PS printer driver, select the Device Settings tab. Scroll down to Installable Options.

Select an installable option and choose a setting.

Mailbox— Not installed, Mailbox

Interface Kit—None installed, Fiery Advanced Controller Interface Kit
Select Fiery Advanced Controller Interface Kit if the FreeForm option is installed.

Tray 6 (HCF)—Not installed, Tray 6 High Capacity Feeder (HCF)

Finisher—Not Installed, Finisher

4. Click OK.

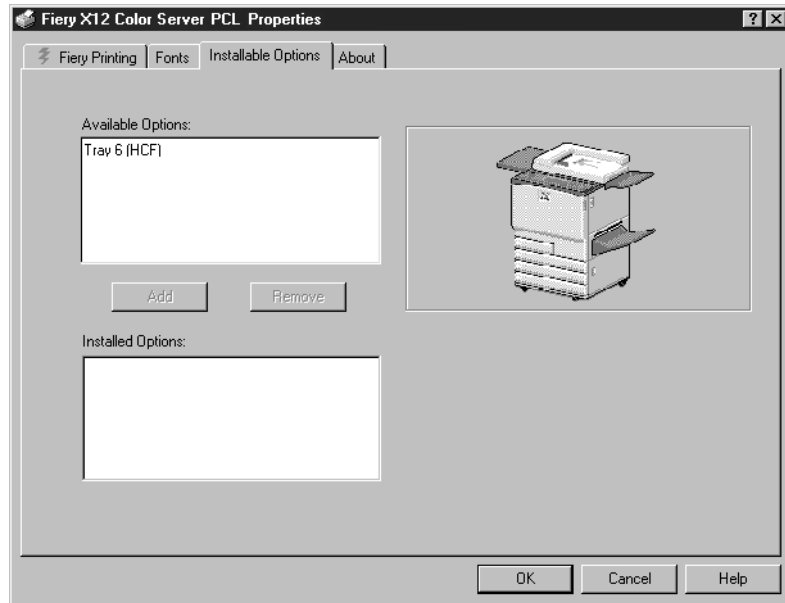

**TO CONFIGURE INSTALLABLE OPTIONS ON THE FIERY
FROM THE PCL PRINTER DRIVER:**

1. Click the Start button, choose Settings, and then choose Printers.
2. Right-click the Fiery EX12 Color Server PCL or the Fiery X12 Color Server PCL printer driver icon and choose Document Defaults.
3. Click the Installable Options tab.
4. To configure the Fiery EX12 Color Server PCL printer driver, select an installed option from the Available Options list and click Add to move the option to the Installed Options list.

Tray 6 (HCF)—Select if an optional Tray 6 High Capacity Feeder (HCF) is installed.

To configure the Fiery EX12 Color Server PCL printer driver, select an installed option from the Available Options list and click Add to move the option to the Installed Options list.

Tray 6 (HCF)—Select if an optional Tray 6 High Capacity Feeder (HCF) is installed.

5. Click OK.

Complete the printer connection according to your network type.

Completing the Windows NT 4.0 connection

To print from Windows NT 4.0 you need to:

- Set up network servers, if any
- Set up the Fiery to accept print jobs from your computer
- Configure a port on each Windows NT computer for the network type

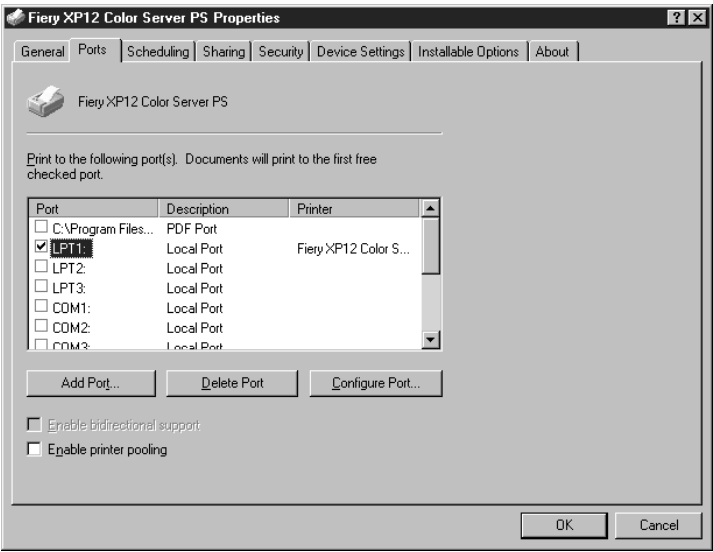

To do this:	See:
Configure the TCP/IP (lpr port) connection	“Completing the Windows NT 4.0 TCP/IP and LPR connection” on page 33.
Configure the IPX (Novell) connection	“Completing the Windows NT 4.0 IPX (Novell) connection” on page 35.

Completing the Windows NT 4.0 parallel port connection

The parallel port cable connects the Fiery to a single computer. Once you have installed the PostScript or PCL printer driver and the Fiery EX12/X12 Color Server PS or PPD, or the Fiery EX12/X12 Color Server PCL PDD, complete the setup for parallel port printing.

TO SET UP PARALLEL PRINTING FOR WINDOWS NT 4.0:

1. Click the Start button, choose Settings, and then choose Printers.
2. Double-click the Fiery EX12/X12 Color Server PS or Fiery EX12/X12 Color Server PCL icon and choose Properties from the Printer menu.

In the Ports tab, confirm that LPT1 (Local Port) is checked.

The Fiery EX12/X12 Color Server PS or Fiery EX12/X12 Color Server PCL is ready to accept parallel print jobs from your computer.

3. Click the General tab and click Print Test Page.
When you select print, your files are transmitted over the parallel port connection to the Fiery.
4. Click the Sharing tab if you want to share the Fiery with network users. Select Shared and select a share name.
Select the operating system or systems used by your network clients if you want to install a printer driver that those clients can download.
5. Click OK to exit the Printer Properties dialog box.

Completing the Windows NT 4.0 TCP/IP and LPR connection

Once you have installed the PostScript or PCL printer driver and printer driver files, complete the setup for the TCP/IP and lpr connection as follows:

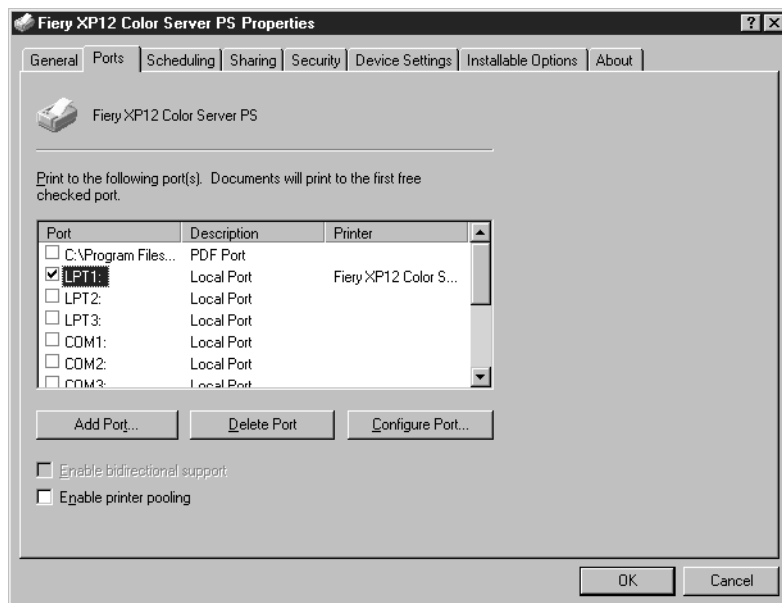

- Prepare the Fiery to accept print jobs using TCP/IP and lpr protocols (For details, see the *Configuration Guide*.)
- Configure the workstation for the TCP/IP connection

Before you continue, ask the system administrator for the IP address assigned to the Fiery, as well as the subnet mask and gateway address, if they are used.

The TCP/IP Protocol and Microsoft TCP/IP Printing software should already be installed on the Windows NT workstation.

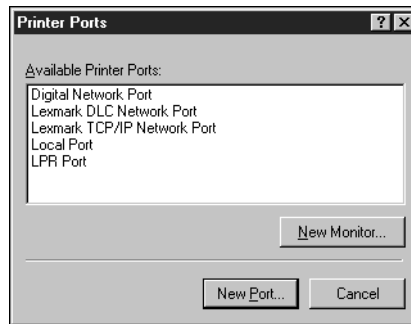

TO SET UP TCP/IP AND LPR PRINTING FOR WINDOWS NT 4.0:

1. Open the Properties dialog box for the Fiery EX12/X12 Color Server PS or EX12/X12 Color Server PCL, and click the Ports tab.

2. Click Add Port.

The available port types are displayed.

**3. Select LPR Port and click New Port.**

If the LPR port is not listed, install the TCP/IP network protocol and Microsoft TCP/IP printing software. See the *Configuration Guide* or your Windows NT 4.0 documentation.

4. Enter the IP address of the Fiery.

If your network uses Domain Name Services (DNS), enter the DNS name assigned to the Fiery instead of the IP address.

5. Press Tab and type one of the following names, depending on the Fiery connection you want to print to.

print
hold

NOTE: This name is case-sensitive; type it *exactly* as shown above.

6. Click OK.

The workstation checks the address or DNS name you entered and notifies you if it cannot resolve the address.

7. Click Close in the Printer Ports dialog box.

The new port configuration is reflected in the Ports tab. You must now close the Printer Properties dialog box to verify the connection.

8. Click OK to close the Printer Properties dialog box.**9. Reopen the Printer Properties dialog box.****10. Click the General tab and click Print Test Page.**

When you print, your PostScript or PCL files are transmitted over the LPR Port connection to the Fiery.

11. Click OK to close the Printer Properties dialog box.**Completing the Windows NT 4.0 IPX (Novell) connection**

Complete the setup for the IPX (Novell) connection as follows:

- Configure the Novell network and file server for handling Fiery print jobs. The file server should be configured with a print server and print connection for the Fiery. For details, see your NetWare documentation.
- Prepare the Fiery for IPX printing.
- Set up the IPX connection on the workstation.

NetWare protocols (NWLink IPX/SPX Compatible Transport) and NetWare client services should already be installed on the Windows NT workstation.

TO SET UP IPX (NOVELL) PRINTING FOR WINDOWS NT 4.0:

1. **Double-click Network Neighborhood.**
2. **Double-click NetWare or Compatible Network.**

A list of NetWare servers is displayed.

3. **Double-click the NetWare Tree or File Server on which the network administrator defined a print connection for the Fiery.**
You may have to log in to the file server to see the print connections.
4. **Double-click the print connection defined for the Fiery.**
5. **If the NetWare server does not have a suitable driver for the Fiery you may be asked if you want to set up the printer on your workstation.**

6. **Click Yes.**

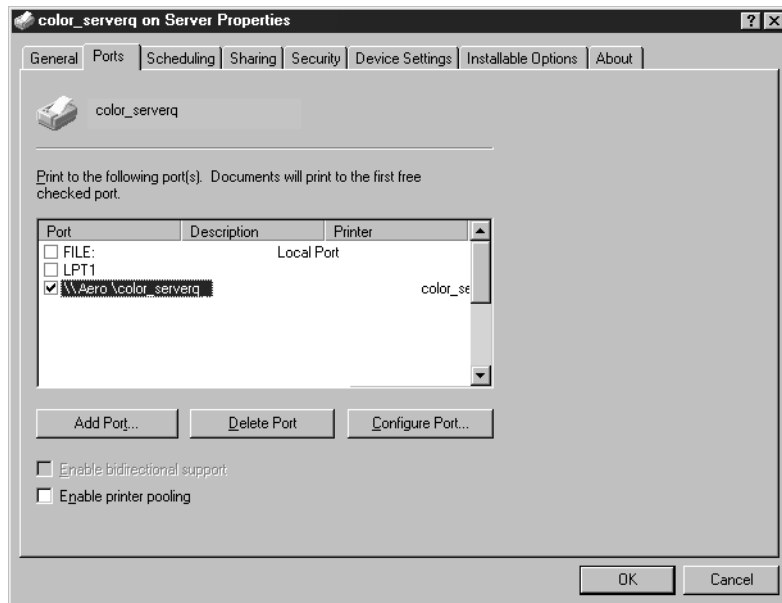

7. Click OK to install the Fiery PostScript PPD or PCL PDD (start with step 6 on page 24).

When installation is complete, a new printer window appears, with the name of the print queue on the NetWare server.

8. Choose Properties from the File menu, and then click the Ports tab.

The NetWare queue you just connected to is listed and checked as a port for the Fiery.

9. Click the General tab and click Print Test Page.

The Fiery polls the NetWare server for print jobs in the print connection defined for the Fiery. When you print, your PostScript files are spooled to that connection and transmitted over the queue "port" to the Fiery.

The test page job is listed in the queue window until it is printed.

Setting up SMB printing on Windows NT 4.0

If you don't have a Novell network, you can print via SMB printing (also known as Windows printing or WINS printing). Printing by this method allows you to install the PostScript or PCL printer driver and printer description files, and print from your computer to a particular print connection (Hold, Print, or Direct) on the Fiery. These instructions assume you have the TCP/IP Protocol and Microsoft TCP/IP Printing software installed on the Windows NT workstation.

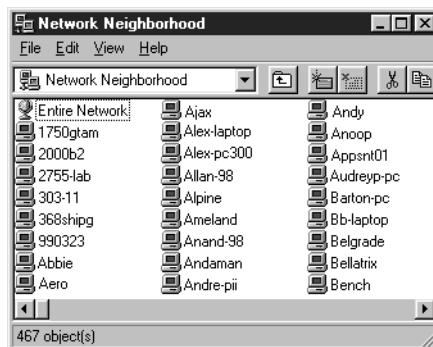

To set up printing to a second or third print connection, you must install a new printer driver and PPD or PDD file. Repeat the procedure "To set up SMB printing on Window NT 4.0:" on page 38. If you install more than one printer, give each a descriptive name during printer driver installation, such as Aero-Print or Aero-Hold, so you can easily identify printers.

BEFORE YOU BEGIN:

1. **Configure the Fiery for SMB printing in Network Setup>Service Setup>Windows Setup.**
SMB printing is referred to as Windows Printing in Setup, on the Control Panel Map, and on the Configuration page. For more information, see the *Configuration Guide*.
2. **Specify whether to install the PS or PCL printer driver using Point and Print in Network Setup>Service Setup>Windows Setup>Point and Print Drivers.**

TO SET UP SMB PRINTING ON WINDOW NT 4.0:

1. **Double-click the Network Neighborhood icon to display your network environment.**

2. Browse for the printer you want to print to.

The printer name you are browsing for is the name entered in Network Setup>Service Setup>Windows Setup>Server Name. Refer to the Configuration page for this information.

The amount of network traffic determines the amount of time required for the Browse function.

If you are not able to locate your Fiery, see your network administrator.

3. Double-click the name of the Fiery to display enabled print connections.**4. Double-click the name of the connection you want to print to.****5. The Printers dialog box appears, asking whether you would like to set up the printer.****6. Select Yes to install the PostScript or PCL printer driver and printer description file for the selected connection.**

Depending on the Point and Print Drivers option specified in Network Setup, the PostScript or the PCL printer driver and printer driver files are automatically installed.

Installing Fiery software

The User Software CD includes software installers for Fiery Link, ColorWise Pro Tools, Fiery Downloader, and the Fiery Scan plug-in. Fiery utility software is supported on Windows 95/98 and Windows NT 4.0 and must be separately installed on each user's computer.

The User Software CD includes the installer for the Command WorkStation application. Command WorkStation software is supported with Windows 95/98 and Windows NT 4.0 only. It should be installed only on workstations that are designated for Command WorkStation use.

Fiery Link, ColorWise Pro Tools, and Fiery Downloader

The installers for Fiery Link, ColorWise Pro Tools, and Fiery Downloader are similar. Before you begin installation, determine the following:

- Where do you want to install the utility on your hard disk?
By default, the installer places Fiery Link, ColorWise Pro Tools, and Fiery Downloader in a folder called “Fiery” in the Programs folder.
- What do you want to name the utility folder in the Windows\Start Menu\Programs folder?
By default, the installer names the folder “Fiery.”

TO INSTALL FIERY LINK, COLORWISE PRO TOOLS, AND FIERY DOWNLOADER:

1. If you are installing Fiery Link, double-click to open the Fiery Link folder.

If you are installing ColorWise Pro Tools, double-click to open the ColorWise Pro folder.

If you are installing Fiery Downloader, double-click to open the Downloader folder.

2. Double-click the Setup.exe icon.

3. Follow the instructions in the Setup dialog boxes to complete installation.

Use the table below as a guide when installing Fiery Link, ColorWise Pro Tools, and Fiery Downloader. For specific instructions, read the information in each dialog box.

Name of dialog box:	Action:	When finished:
Welcome	Read the Setup program introduction.	Click Next.
Software License Agreement	Read the license agreement.	Click Yes.
Choose Destination Location	Specify a hard disk location for the installed utility software.	Click Next.
Select Program Folder	Specify a folder name for the software located on the Programs menu. By default the folder name is “Fiery”.	Click Next.
Setup Complete	Acknowledge that the software installation is complete.	Click Finish.

Command WorkStation

The Command WorkStation software installer is on the User Software CD. In addition to the Command WorkStation application software, the installer installs Java files necessary to use Fiery Setup on the Command WorkStation. Before you begin this installation, determine the following:

- Where do you want to install the software on your hard disk?
By default, the installer places the Command WorkStation software in the Programs\Fiery folder on your hard disk.
- What do you want to name the Command WorkStation folder in the Windows\Start Menu\Programs folder?
By default, the installer names the folder “Command WorkStation.”
- Do you want to place a shortcut to the Command WorkStation application in your Windows\Start Menu\Programs\StartUp folder?
Placing a shortcut in the StartUp folder automatically launches the Command WorkStation application every time you restart your computer.

TO INSTALL COMMAND WORKSTATION SOFTWARE:

1. On the User Software CD, double-click the CStation folder.
2. Double-click the Setup.exe icon.
3. Follow the instructions in the Setup dialog boxes to complete installation of Command WorkStation software.

Use the table below as a guide when installing Command WorkStation software. For specific instructions, read the information in each dialog box.

Name of dialog box:	Action:	When finished:
Welcome	Read the Setup program introduction.	Click Next.
Software License Agreement	Read the license agreement.	Click Yes.
Choose Destination Location	Specify a hard disk location for the installed Command WorkStation software.	Click Next.
Select Program Folder	Specify a folder name for the Command WorkStation software located in the Programs menu.	Click Next.

Name of dialog box:	Action:	When finished:
Question	Indicate if you want to place a shortcut to the Command WorkStation application in your StartUp folder.	Click Yes or No.
Setup Complete	Click Finish to install MS Java VM 5.00.3182 on your computer, if it is not already installed, or click Finish to complete Setup.	Click Finish. Restart your computer to initialize Command WorkStation and the Java files.

Fiery Scan

The Scan folder contains the TWAIN Fiery Scan Module installer. This installer automatically creates a folder named Twain_32 in the Windows folder on your hard disk, and then installs the Fiery Scan plug-in module into the folder.

You can access the Fiery Scan plug-in from Adobe Photoshop using the TWAIN module. For details, see the *Printing Guide*.

NOTE: Before installing the TWAIN Fiery Scan module, make sure the TWAIN plug-ins (installed with Adobe Photoshop software) are located in the correct Photoshop\Plugins subfolder. If the TWAIN plug-ins have been deleted, you must reinstall Adobe Photoshop software in order to use Fiery Scan.

TO INSTALL THE TWAIN FIERY SCAN MODULE:

- 1. On the User Software CD, double-click the Fiery Scan folder.
- 2. Double-click the Setup.exe icon.
- 3. Follow the instructions in the Setup dialog boxes to complete installation of the TWAIN Fiery Scan module.

Use the table below as a guide when installing the TWAIN Fiery Scan module. For specific instructions, read the information in each dialog box.

Name of dialog box:	Action:	When finished:
Welcome	Read the introduction.	Click Next.
Software License Agreement	Read the license agreement.	Click Yes.
Setup Complete	Acknowledge that the software installation is complete.	Click Finish.

Using the software for the first time

Before you can use the newly installed software, you must properly configure the connection to the Fiery.

Configuring a connection for Fiery Link

You can use Fiery Link to monitor the status of Fiery servers and view information about the print jobs sent to them.

When you click the Edit Fiery List button, all Fiery servers on the local subnet appear in the Available Fierys list in the My Fiery List dialog box. You can specify which Fiery servers to connect to and monitor from this dialog box. If the Fiery is not in your local subnet, you can use Fiery Link options to manually configure a connection, or you can perform an advanced search to locate and connect to Fiery servers anywhere on the network. The procedures below describe locating and connecting to a Fiery server using manual and advanced search methods.

For information on using Fiery Link, see the *Printing Guide*.

NOTE: Fiery Link is supported only over TCP/IP.

TO CONFIGURE THE CONNECTION TO FIERY SERVERS IN A LOCAL SUBNET:

1. **Launch Fiery Link by double-clicking its icon or by choosing it from the Start>Programs>Fiery menu.**

The Warning dialog box “No Fierys configured, please select a Fiery” appears.

2. **Click OK.**

The Edit My Fiery List dialog box opens, and all servers found in the local subnet appear in the Available Fierys area of the dialog box. If the Fiery is located on a different subnet, an Error dialog box appears. Click OK to dismiss the dialog box and perform an Advanced IP search (page 49) or Advanced Subnet search (page 53) to locate the Fiery.

Name	Device Name	IP Address
Brad R's Aero	<device name>	100.100.100.100

Modify... Remove

OK Cancel Apply

When the arrow button is clicked, Fiery Link checks for the specified Fiery. If the server is found, it appears in the My Fiery List. If it is not found, an error message appears.

To add the server to the My Fiery List without confirming its existence on the network, hold down the Ctrl key while clicking the arrow button.

2. To give the server a nickname, select it in the My Fiery List and click **Modify**.

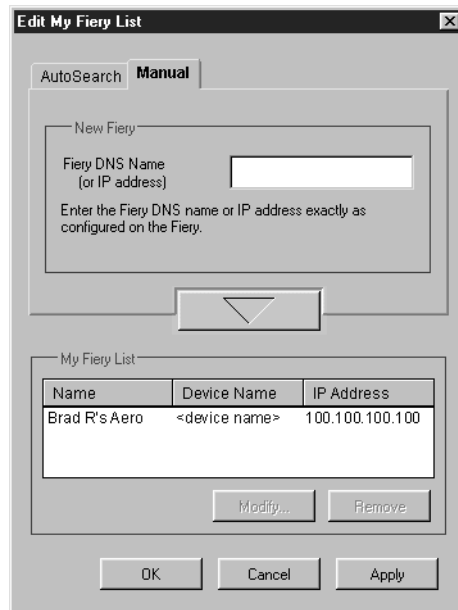

3. Select **Use Nickname**, and enter a nickname for the Fiery.

The **Modify Fiery Attributes** dialog box contains the following fields and controls:

- Name:** A text field containing the text "Aero".
- Use Nickname:** A checked checkbox.
- Nickname:** A text field containing the text "Brad R's Aero".
- Device Name:** A text field containing the placeholder text "<device name>".
- Buttons:** "OK" and "Cancel" buttons at the bottom.

4. Click **OK**.

The **Edit My Fiery List** dialog box features two tabs: **AutoSearch** and **Manual** (which is selected). It includes a "New Fiery" section with a text field for "Fiery DNS Name (or IP address)" and a note: "Enter the Fiery DNS name or IP address exactly as configured on the Fiery." Below this is a downward-pointing arrow button. The "My Fiery List" section contains a table with the following data:

Name	Device Name	IP Address
Brad R's Aero	<device name>	100.100.100.100

Below the table are "Modify..." and "Remove" buttons. At the bottom of the dialog are "OK", "Cancel", and "Apply" buttons.

5. Click **Apply** to accept the changes to My Fiery List.
6. Click **OK**.

TO CONFIGURE THE CONNECTION FOR FIERY LINK USING AN ADVANCED IP SEARCH:

1. Click the AutoSearch tab.

The screenshot shows a dialog box titled "Edit My Fiery List" with a close button (X) in the top right corner. Inside the dialog, there are two tabs: "AutoSearch" (which is selected) and "Manual". Below the tabs, there is a section labeled "Available Fierys" with a "Refresh" button and an "Advanced..." button. Underneath this is a table with three columns: "Name", "Device Name", and "IP Address". The table is currently empty. Below the table is a downward-pointing arrow button. At the bottom of the dialog, there is a section labeled "My Fiery List" with another table having the same three columns: "Name", "Device Name", and "IP Address". This table is also empty. Below this table are "Modify..." and "Remove" buttons. At the very bottom of the dialog are "OK", "Cancel", and "Apply" buttons.

2. Click the Advanced button.

The screenshot shows the 'Advance Search' dialog box. It has two tabs: 'IP Range' and 'Subnet Addr.'. The 'IP Range' tab is active. Inside this tab, there are two rows of four input fields each, labeled 'From IP' and 'To IP'. Below these is a large, empty rectangular area with the header 'IP Ranges /Subnet Addr. Parameter Type'. At the bottom of the dialog are three buttons: 'Search', 'Cancel', and a 'Remove' button.

3. To find all servers within an IP address range, enter an IP Address in the From IP field, and an IP address in the To IP field, and click the arrow button.

This screenshot shows the same 'Advance Search' dialog box, but now the 'From IP' field contains the value '10.10.10.100' and the 'To IP' field contains '10.10.10.254'. The 'Subnet Addr.' tab is also visible. The large text area below the IP fields remains empty. The 'Search', 'Cancel', and 'Remove' buttons are still present at the bottom.

Repeat step 3 for each IP address range you would like to search. To remove an IP address range from the list, select the range in the IP Range/Subnet Addr. window and click the Remove button.

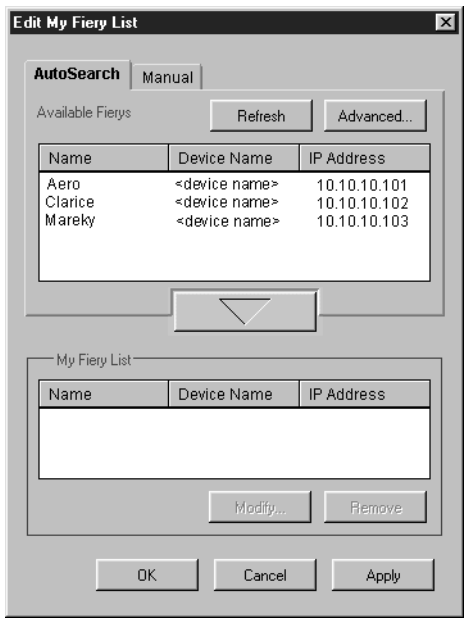

You can also search for the server using a range of subnet values. For more information, see “To configure the connection for Fiery Link using an advanced subnet search:” on page 53.

4. Click Search.

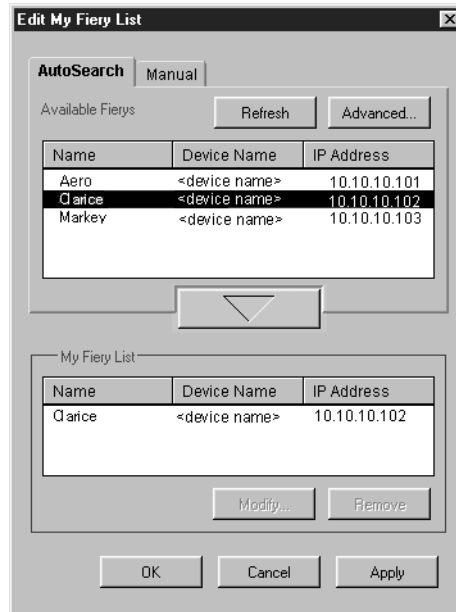

When the search is complete, all servers found appear in the Available Fierys area of the dialog box.

If the Fiery was not found, and you would like to search again using the same parameters, click Refresh.

NOTE: Only servers that support Fiery Link appear in the Available Fierys area.

5. To add a server to the My Fiery List, select it and click the arrow button.

The server appears in the My Fiery List.

Repeat step 5 for each server you would like to add to the My Fiery List.

6. Click **Apply** to accept the changes to My Fiery List.
7. Click **OK**.

**TO CONFIGURE THE CONNECTION FOR FIERY LINK USING
AN ADVANCED SUBNET SEARCH:**

1. Click the AutoSearch tab.

Edit My Fiery List

AutoSearch | Manual

Available Fierys

Refresh Advanced...

Name	Device Name	IP Address
------	-------------	------------

▼

My Fiery List

Name	Device Name	IP Address
------	-------------	------------

Modify... Remove

OK Cancel Apply

2. Click the **Advanced** button and click the **Subnet Addr.** tab.

The 'Advanced Search' dialog box is shown with the 'Subnet Addr.' tab selected. It contains input fields for 'IP address' and 'Subnet Mask', each divided into four segments. Below these fields is a downward-pointing arrow button. At the bottom, there is a table with two columns: 'IP Range / Subnet Addr.' and 'Parameter Type'. The table is currently empty. Below the table are 'Search' and 'Cancel' buttons, and a 'Remove' button is located above them.

3. Enter the IP address and subnet to search, and click the arrow button.

The 'Advanced Search' dialog box is shown with the 'Subnet Addr.' tab selected. The 'IP address' field now contains the values 10, 11, 147, and 52. The 'Subnet Mask' field now contains the values 255, 255, 252, and 0. The downward-pointing arrow button is highlighted. The table at the bottom now contains one entry: '10.11.147.255' under the 'IP Range / Subnet Addr.' column and 'Subnet Addr.' under the 'Parameter Type' column. The 'Search' and 'Cancel' buttons are at the bottom, and the 'Remove' button is above them.

The IP address and subnet to be searched appears in the IP Range/Subnet Addr. list. Repeat this procedure for each IP address and subnet you would like to search.

To remove a subnet value from the IP Range/Subnet Addr. list, select it and click the Remove button.

4. Click Search.

When the search is complete, all servers found appear in the Available Fierys area of the dialog box.

If the Fiery was not found, and you would like to search again using the same parameters, click Refresh.

Edit My Fiery List

NOTE: Only servers that support Fiery Link appear in the Available Fierys area.

5. To add a Fiery server to the My Fiery List, select it and click the arrow button.

The server appears in the My Fiery List.

Repeat step 5 for each server you would like to add to the My Fiery List.

6. Click **Apply** to accept the changes to My Fiery List.
7. Click **OK**.

Configuring the connection for Fiery utilities and the Command WorkStation

The first time you launch Fiery Downloader, Fiery Scan, or the Command WorkStation, you are prompted to configure the connection to the Fiery.

NOTE: The same TCP/IP configuration is used for Fiery Downloader, Fiery Scan, or Command Workstation, so any change in one configuration affects all connections.

BEFORE YOU BEGIN:

- **Print the Configuration page from the Control Panel and note the IP Address of the Fiery.**

You can also set up a Domain Name Server (DNS) for the IP address of the Fiery. See your Windows system documentation for information.

TO CONFIGURE THE CONNECTION FOR FIERY DOWNLOADER, FIERY SCAN, AND COMMAND WORKSTATION:

1. **Launch Fiery Downloader by double-clicking its icon or choosing it from the Start>Programs>Fiery menu.**

Launch Command WorkStation by double-clicking its icon or choosing it from the Start>Programs menu.

Launch Photoshop and open Fiery Scan (for details, see the *Printing Guide*).

2. **Click OK.**

3. Enter the appropriate information for the Fiery.

Nickname—Enter a name for the Fiery. This name can be any name you wish; it does not have to match the actual Server Name of the Fiery.

NOTE: The nickname cannot contain any of the following seven characters:
[] _ " ' <space> <tab>

Protocol—Choose the type of network protocol you are using from the pop-up menu.

NOTE: Command WorkStation software is supported on Windows 95/98 and Windows NT 4.0 over TCP/IP only.

Server Name—If you are using the TCP/IP protocol, enter the IP address (or DNS name) of the Fiery.

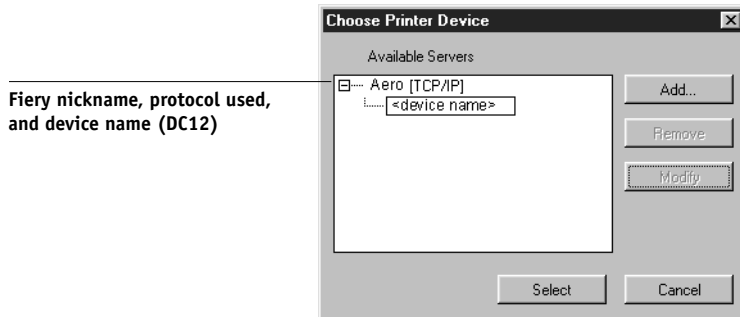

New Device—Enter the name of the device the Fiery is connected to: DC12.

For TCP/IP networks

4. When you have entered all the information, click Add.

5. With the device name (DC12) selected in the Devices list, click OK.

The Fiery appears in the list of available servers. The first line of the entry displays the nickname you gave the server, followed by the protocol you chose. The second line displays the device name.

6. With the device name (DC12) selected in the list of Available servers, click OK to begin using the software.

Modifying the configuration

You should edit the configuration whenever there is any change to your Fiery server or network, such as a Server Name or IP Address. First change the specific Fiery Setup information before configuring the connection.

TO MODIFY THE CONFIGURATION:

1. To edit information for a Fiery in the list of available servers, select the Fiery by its nickname and click **Modify**.
2. Edit information in the **Modify Server Settings** dialog box, as necessary, and click **OK** when finished.
3. To add a new Fiery to the list of available servers, click **Add**. Configure the **Add New Server** dialog box as outlined in steps 3 through 5 in the previous procedure.
4. To remove a Fiery, select the Fiery by its nickname and click **Remove**.

Configuring a connection for ColorWise Pro Tools

The following procedure describes configuring a connection for ColorWise Pro Tools.

BEFORE YOU BEGIN:

- **Print the Configuration page from the Control Panel and note the IP Address of the Fiery.**

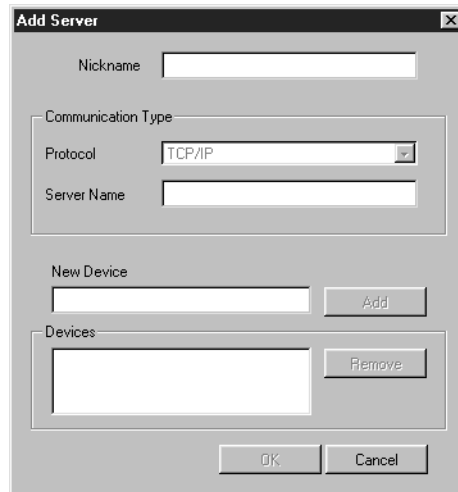

You can also set up a Domain Name Server (DNS) for the IP address of the Fiery. See your Windows system documentation for information.

TO CONFIGURE THE CONNECTION FOR COLORWISE PRO TOOLS:

1. **Launch ColorWise Pro Tools by double-clicking its icon or choosing it from the Start > Programs > Fiery Menu.**
2. **The Choose Printer Device Dialog box appears.**

3. If you have previously configured a Windows connection to the Fiery, you are ready to use ColorWise Pro Tools. If you have not configured a connection, click Add.

The 'Add Server' dialog box contains the following fields and controls:

- Nickname:** A text input field.
- Communication Type:** A section containing:
 - Protocol:** A dropdown menu with 'TCP/IP' selected.
 - Server Name:** A text input field.
- New Device:** A text input field with an 'Add' button to its right.
- Devices:** A list box with a 'Remove' button to its right.
- Buttons:** 'OK' and 'Cancel' buttons at the bottom.

4. Enter the appropriate information for the Fiery.

Nickname—Enter a name for the Fiery. This can be any name you wish; it does not have to match the actual server name of the Fiery.

NOTE: The nickname cannot contain any of the following seven characters:
[] _ " ' <space> <tab>

Protocol—Choose the type of network protocol you are using from the pop-up menu. ColorWise Pro Tools is supported only with TCP/IP, so no selection is necessary.

Server Name—Enter the IP Address (or DNS or hosts name) of the Fiery.

New Device—Enter the name of the device the Fiery is connected to: DC12. This device name appears in the Printer Setup section of the Configuration Page.

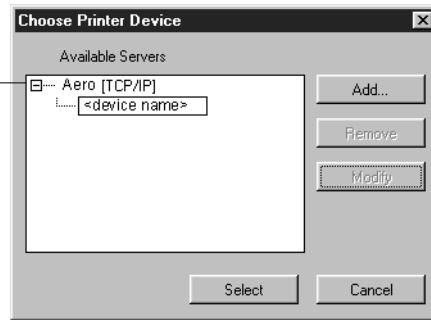

5. When you have added all the information, click Add.

6. With the device name (DC12) selected in the Devices list, click OK.

The Fiery appears in the list of available servers. The first line of the entry displays the nickname you gave the server, followed by the protocol. The second line displays the device name.

7. With the device name (DC12) selected in the list of Available Servers, click Select to begin using ColorWise Pro Tools.

Fiery nickname, protocol used,
and device name (DC12)

Modifying the configuration

You should edit the configuration whenever there is any change to your Fiery server or network configuration, such as server name or IP address. First change the specific Fiery Setup information before configuring the connection.

TO MODIFY THE CONFIGURATION:

1. To edit information for a Fiery in the list of available servers, select the Fiery by its nickname and click Modify.
2. Edit information in the Modify Server Settings dialog box as necessary, and click OK when finished.
3. To add a new Fiery to the list of available servers, click Add. Configure the Fiery in the Add Server dialog box as outlined in step 4 through 5 in the previous procedure.
4. To remove a Fiery from the list of available servers, select the Fiery by its nickname and click Remove.

Copying color files from the User Software CD

You can copy additional color files from the User Software CD to your hard disk. Many of the files are PostScript files that you can download and print using Fiery Downloader.

Icm folder	ICM monitor setting file, and device profiles specially designed for use with the Fiery and particular copier models. For instructions on installing see “Installing the ICM profiles on Windows 95/98 or Windows NT 4.0” on page 64.
Clrfiles folder (inside English folder)	<p>Cmyk.ps, an 11-page, letter-size PostScript file to use for reference when defining CMYK colors in applications.</p> <p>Pantone.ps, a 19-page, letter-size PostScript file that indicates the closest equivalent of PANTONE coated colors that the Fiery and your particular copier model can produce. The method used to print the Pantone.ps file differs depending on the Spot Color Matching setting. For more information, see the <i>Printing Guide</i> and the <i>Color Guide</i>.</p> <p>Rgb_01.doc, a file you can print from Microsoft Word 97 or later to view available RGB colors.</p> <p>Rgb_02.ppt, a file you can print from PowerPoint 6.0 or later to view available RGB colors.</p>
Calibrat folder (inside English/Clrfiles folder)	<p>Four PostScript measurements files of color patches: Custom21.ps, Custom34.ps, Stand21.ps, and Stand34.ps. The numbers in the file names refer to the number of patches on the page. The Custom files are provided to enable you to download measurement patches that incorporate the copier’s current calibration set. The Standard files are provided to enable you to download standard measurement patches that ignore the copier’s current calibration set. For information on how to use these files, see the <i>Color Guide</i>.</p>

NOTE: These files are provided for expert users and should not be used for day-to-day calibration.

Copying the printer description files for Windows

The User Software CD contains printer description files for popular Windows applications. Pagemaker 5.0, 6.0, and 6.5 do not support automatic installation of printer description files from the Printers Control Panel. To make the Fiery available in the Print and Page Setup dialog boxes of this application, copy printer description files to the appropriate location.

TO COPY THE PRINTER DESCRIPTION FILES:

1. On the User Software CD, open the English\Prntdrv folder.
2. Copy the printer description file for your Fiery to the appropriate location.

If you use:	Copy this file:	To this location:
PageMaker 5.0 or later	For the Fiery X12 PS, select Efax8010.ppd; for the Fiery EX12 PS, select Efax9010.ppd; for the Fiery X12 PCL, select Efax8z10.ppd; for the Fiery EX12 PCL, select Efax9z10.ppd	For PageMaker 5.0, \ALDUS\USENGLSH\PPD4 For PageMaker 6.0, \PM6\RSRC\USENGLSH\PPD4 For PageMaker 6.5, \PM65\RSRC\USENGLSH\PPD4

Installing the ICM profiles on Windows 95/98 or Windows NT 4.0

The ICM profiles included in Icm folder on the User Software CD are for use with ColorWise Pro Tools. They can also be used with applications that support ICC standards. For most ICC aware applications, the files must be installed into a folder named Color in the System folder. For use with ColorWise Pro Tools, the files can be copied to a folder of your choice.

For more information on using ICC profiles with ColorWise Pro Tools, see the *Color Guide*.

TO INSTALL THE ICM PROFILES ON WINDOWS 95/98 OR WINDOWS NT 4.0:

1. On the User Software CD, open the Icm folder.
2. In you are using Windows 95/98, copy the profiles to the Windows\System\Color folder on your hard disk.

If you are using Windows NT, copy the profiles to the Windows NT\System32\Color folder on your hard disk.

NOTE: If a folder named “Color” does not exist in the Sytem32 folder, create one and install the profiles into it.

Loading the working space profile

The Efirgb.icm profile can be used in Photoshop, or other applications that support ICM profiles, to define a working space for images to be printed to the Fiery.

These instructions assume you have installed the ICM profiles included on the User Software CD. For more information, see the previous section.

NOTE: The internal name of an ICM profile may vary slightly from its file name.

NOTE: If you use Fiery Scan, you should install the monitor settings profile.

TO LOAD THE WORKING SPACE PROFILE USING PHOTOSHOP 5.0:

1. Launch Photoshop.
2. From the File menu, choose Color Settings, and from the Color Settings submenu, choose RGB Setup.

3. In the RGB Setup dialog box, click Load.

4. For Windows 95/98, browse to the Windows\System\Color folder, select the Efirgb v1f file, and click Load.

For Windows NT, browse to the Windows NT\System32\Color folder, select the Efirgb v1f file, and click Open.

The Efirgb v1f file appears as the selection in the RGB pop-up menu of the RGB Setup dialog box.

5. Click OK.

For more information about ICM profiles, see your application's documentation.

Loading the ICM copier profile

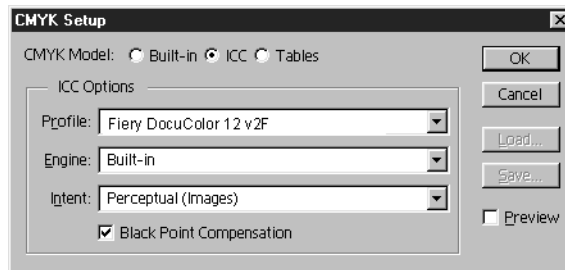

The ICM copier profile enables RGB-to-CMYK conversions that are specific to the copier you are using.

These instructions assume you have installed the ICM profiles included on the User Software CD. For more information, see “Installing the ICM profiles on Windows 95/98 or Windows NT 4.0” on page 64.

NOTE: The internal name of an ICM profile may vary slightly from its file name.

TO LOAD THE ICM COPIER PROFILE USING PHOTOSHOP 5.0:

1. **Launch Photoshop.**
2. **From the File menu, choose Color Settings, and from the Color Settings submenu, choose CMYK Setup.**
3. **In the CMYK Setup dialog box, choose ICC as the CMYK color model.**
4. **Select the profile that corresponds to the copier or the device you would like to simulate from the Profile pop-up menu.**

5. **Click OK.**

For more information about ICC profiles, see the *Color Guide* or your application's documentation.

Installing User Software on a Mac OS Computer

The general steps for installing the Fiery user software and setting up printing on a Mac OS computer are:

- Install the Adobe PostScript printer driver and PostScript Printer Description file (PPD)
- Set up the Fiery in the Chooser
- Install the Fiery utilities (ColorWise Pro Tools, Fiery Link, Fiery Downloader, and Fiery Spooler)
- Install the printer and screen fonts
- Install the ColorSync™ profiles
- Copy additional color-reference and application-specific files from the User Software CD as needed

In addition to using the User Software CD, you can download printer drivers and the Fiery Link installer from the Fiery with the Installer WebTool (if the site administrator has enabled Internet access to the Fiery). For instructions, see “Using the Installer WebTool” on page 102.

Once you download the printer files, the installation process is identical to installing from the User Software CD.

Setting up the Fiery as a PostScript printer

To set up the Fiery as a PostScript printer, you must install the Adobe PostScript printer driver and the PPD file that corresponds to your copier. These files are provided on the User Software CD.

Printer drivers provide a way to communicate information on print jobs between your applications, the Fiery, and any other PostScript printer connected to your computer. You can use the following procedures whether you are installing from the User Software CD or installing with printer files downloaded using the Installer WebTool.

TO INSTALL THE ADOBEPS PRINTER DRIVER AND PPD FILE:

1. If you are installing from the CD, open the English: Printer Driver folder.

If you are installing from files you downloaded using the Installer WebTool, open the Printer Driver folder on your hard disk.

2. Double-click the AdobePS 8.6 Installer icon.

A warning dialog box appears.

3. Click Yes to continue with installation of printer driver software, and to confirm that your computer must be restarted after installation.

The AdobePS 8.6 Installer installs the Adobe PostScript printer driver and the PPD file that corresponds to your copier.

4. Click Restart when installation is complete.

NOTE: If you operate the Fiery in a copy shop, quick print shop, or service bureau, you might want to provide copies of the printer driver, PPD file, any ICC profiles or separation tables used in conjunction with the image, and relevant documentation to customers. This ensures that jobs they create and print to files are properly formatted for printing to the Fiery.

Setting up the Fiery in the Chooser

After you install the Adobe PostScript printer driver and PPD file (see “Setting up the Fiery as a PostScript printer” on page 69), you need to set up the Fiery in the Chooser in order to take full advantage of its features. This section describes how to set up the Fiery with the AdobePS printer driver.

TO SET UP THE FIERY IN THE CHOOSER:

- 1. Select Chooser from the Apple menu.**

Make sure AppleTalk is set to Active.

- 2. Select the correct AppleTalk Zone, if necessary.**

- 3. Click the AdobePS icon.**

The Fiery appears in the Select a PostScript Printer list in the form of <server name>_<device name>_<print connection>. The device name (DC12) is the internal name of your copier.

NOTE: Only the print connections (Direct, Hold, and Print) that have been enabled in Setup appear in the Chooser.

- 4. Select a Fiery connection from the “Select a PostScript Printer” list and click Create.**

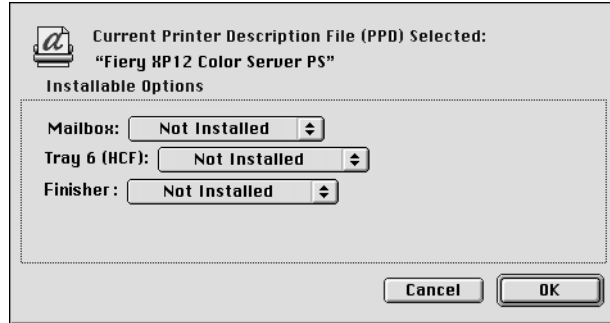

The AdobePS printer driver automatically selects the correct PPD file for your Fiery.

NOTE: You will need to set up each print connection separately. Repeat step 4 for all enabled connections.

- 5. In the Chooser list, an icon appears next to the newly installed Fiery; select it and click Setup.**

- 6. Click Configure in the dialog box that appears.**

7. To configure the Fiery EX12 Color Server PS, in the Installable Options dialog box, select the appropriate settings from the pop-up menus and click OK.

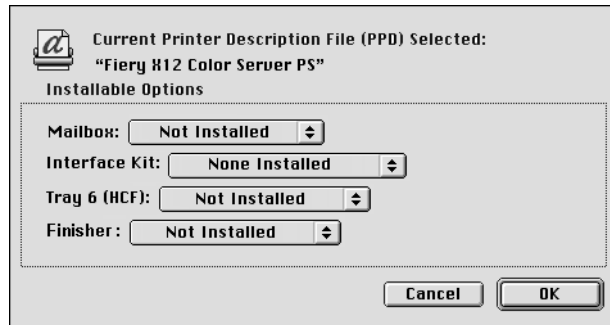

Mailbox— Not installed, Mailbox

Tray 6 (HCF)—Not installed, Tray 6 (HCF)

Finisher—Not Installed, Finisher

8. To configure the Fiery X12 Color Server PS, in the Installable Options dialog box, select the appropriate settings from the pop-up menus and click OK.

Mailbox— Not installed, Mailbox

Tray 6 (HCF)—Not installed, Tray 6 (HCF)

Finisher—Not Installed, Finisher

Interface Kit—None installed, Fiery Advanced Controller Interface Kit

Select Fiery Advanced Controller Interface Kit if the FreeForm option is installed.

9. Close the Chooser.

Installing Fiery software and fonts

The Mac OS installers function essentially the same for each type of software. Before you begin each installation, determine where you want to install each item on your hard disk. By default, the installers place:

- ColorSync profiles in the ColorSync Profiles folder on your hard disk
If you are using ColorSync 2.5 or later, the profiles are installed into the ColorSync Profiles folder inside the System folder. If you are using an earlier version of ColorSync, the profiles are installed to the ColorSync Profiles folder inside the System:Preferences folder. The printer profile can be moved to a folder of your choice.
- Fiery Downloader, Fiery Spooler, ColorWise Pro Tools, and Fiery Link in a folder named “Fiery f” at the top level of your hard disk
- Fiery Scan installer prompts you to locate your Photoshop Plug-Ins folder
The installer also creates a folder named TWAIN in your System folder:Preferences folder, and installs a Fiery Scan module and Source Manager file into that folder.
- Fonts in the System folder:Fonts folder on your hard disk

For instructions on installing Fonts, see “Fonts” on page 95.

TO INSTALL MAC OS SOFTWARE:

1. **On the User Software CD or your hard disk, double-click the Installer icon of the item you want to install.**
2. **Read the Software License Agreement and click Accept.**

3. **Click Install to copy the item to the default location, or navigate to a location in which to install the item.**

Use the table below as a guide when installing software.

If you are installing:	Action:	To install:
ColorSync Profiles	The ICC profiles are automatically installed into the ColorSync Profiles folder. Perform the steps in “Loading ICC profiles” on page 97 after installation is complete.	Click Install.
Fiery Downloader	Specify a hard disk location for Fiery Downloader software.	Click Install.
Fiery Scan	Navigate to your Photoshop:Plug-ins folder. The Fiery Scan module and Source Manager file is automatically installed to your System Folder:Preferences folder.	Click OK.
X12 Fiery Link	Specify a hard disk location for Fiery Link software.	Click Install.
ColorWise Pro Tools	Specify a hard disk location for ColorWise Pro Tools software.	Click Install.
Fiery Spooler	Specify a hard disk location for Fiery Spooler software.	Click Install.

4. **If prompted, click Quit to close the software installer.**

In order to use ColorWise Pro Tools, Fiery Spooler, or Fiery Link, you must have Mac OS Runtime for Java (MRJ 2.1.4) installed on your computer.

If you do not have MRJ installed, the ColorWise Pro Tools, Fiery Spooler, or Fiery Link installer automatically initiates the MRJ 2.1.4 installation process.

TO INSTALL MAC OS RUNTIME FOR JAVA:

1. Read the Apple Computer, Inc. License Agreement and click Agree to install the software.
2. Click Install.

Some files are installed.

3. Click Quit.

You are now ready to configure the ColorWise Pro Tools connection to the Fiery, as described below.

Configuring a connection for ColorWise Pro Tools

The first time you use ColorWise Pro Tools, Fiery Link, or Fiery Spooler you are prompted to configure a connection to the Fiery.

NOTE: ColorWise Pro Tools, Fiery Link, and Fiery Spooler function only over TCP/IP networks.

BEFORE YOU BEGIN:

- **Print the Configuration page from the Control Panel and note the IP address of the Fiery.**

TO CONFIGURE A CONNECTION FOR COLORWISE PRO TOOLS:

1. **Launch the utility by double-clicking its icon.**

The Choose Printer Device Dialog box appears.

2. If you have previously configured a connection to the Fiery, you are ready to use ColorWise Pro Tools. If you have not configured a connection, click Add.

The 'Add Server' dialog box is shown. It includes the following elements:

- Nickname:** A text input field.
- Communication Type:** A section containing:
 - Protocol:** A dropdown menu currently showing 'TCP/IP'.
 - Server Name:** A text input field.
- New Device:** A text input field and an 'Add' button.
- Devices:** A list box and a 'Remove' button.
- Buttons:** 'OK' and 'Cancel' buttons at the bottom.

3. Enter the appropriate information for the Fiery.

Nickname—Enter a name for the Fiery. This can be any name you wish; it does not have to match the actual server name of the Fiery.

NOTE: The nickname cannot contain any of the following seven characters:
 [] _ " ' <space> <tab>

Protocol—Choose the type of network protocol you are using from the pop-up menu. ColorWise Pro Tools is supported only with TCP/IP, so no selection is necessary.

Server Name—Enter the IP Address (or DNS or hosts name) of the Fiery.

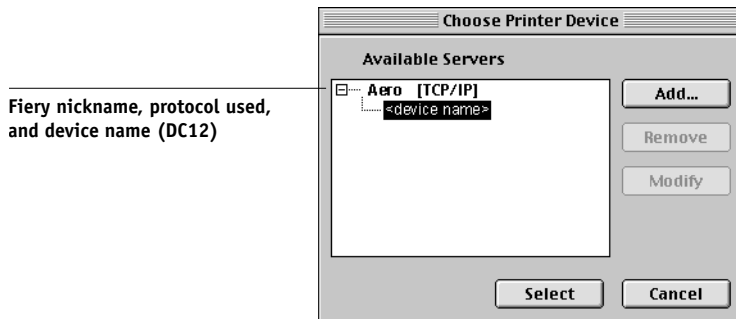

New Device—Enter the name of the device the Fiery is connected to:DC12. This device name appears in the Printer Setup section of the Configuration page.

4. When you have added all the information, click Add.

5. With the device name (DC12) selected in the Devices list, click OK.

The Fiery appears in the list of available servers. The first line of the entry displays the nickname you gave the server, followed by the protocol. The second line displays the device name.

6. With the device name (DC12) selected in the list of Available Servers, click Select to begin using ColorWise Pro Tools.

Modifying the configuration

You should edit the configuration whenever there is any change in your original configuration, such as a change of IP address. First change the specific Fiery Setup information before configuring the connection.

TO MODIFY THE CONFIGURATION:

1. To edit information for a Fiery in the list of available servers, select the Fiery by its nickname and click Modify. Edit information in the Modify Server Settings dialog box as necessary, and click OK when finished.
2. To add a new Fiery to the list of available servers, click Add. Configure the Add New Server dialog box, as outlined in steps 3 through 5 in the previous procedure.
3. To remove a Fiery from the list of available servers, select the Fiery by its nickname and click Remove.

Configuring a connection for Fiery Spooler

BEFORE YOU BEGIN:

- Print the Configuration page from the Control Panel and note the IP address of the Fiery.

TO CONFIGURE A CONNECTION FOR FIERY SPOOLER:

1. Launch the utility by double-clicking its icon.

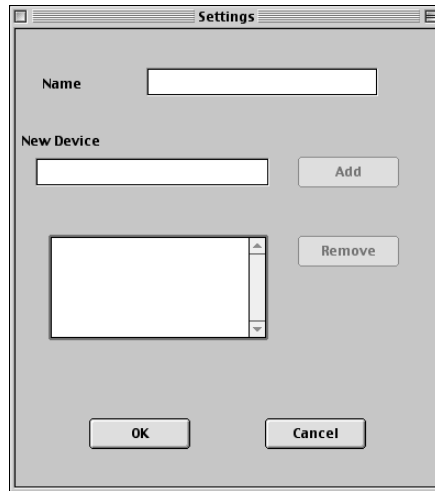

The Chooser dialog box appears.

2. Click Option.

3. Click Add.

4. Enter the appropriate information for the Fiery.

Name—Enter the IP address (or DNS name) of the Fiery.

New Device—Enter the name of the device the Fiery is connected to: DC12. This device name appears in the Printer Setup section of the Configuration page.

5. When you have entered all the information, click Add.

6. With the device name (DC12) selected, click **OK**.

The Fiery appears in a list of configured servers.

7. Click **OK** in the **Configure** dialog box.

The Fiery appears in a list of available servers.

Fiery name and device name
(DC12)

8. With the Fiery selected in the list of available servers, click **OK** to begin using Fiery Spooler.

Modifying the configuration

You should edit the configuration whenever there is any change to your Fiery or network, such as an IP Address or device change. First change the specific Fiery Setup information before configuring the connection.

TO MODIFY THE CONFIGURATION:

1. In the Chooser dialog box, click **Option**.
2. To edit information for a Fiery, select the Fiery by its IP address or DNS name and click **Modify**. Edit information in the Settings dialog box, as necessary, and click **OK** when finished.
3. To add a new Fiery, click **Add**. Configure the Settings dialog box as outlined in steps 4 through 6 in the previous procedure.
4. To remove a Fiery, select the Fiery by its IP address or DNS name and click **Remove**.

The list of available servers reflects the modifications you have made.

Configuring a connection for Fiery Link

You can use Fiery Link to monitor the status of Fiery servers and view information about the print jobs sent to them.

When you click the Edit Fiery List button, all Fiery servers on the local subnet appear in the Available Fierys list of the My Fiery List dialog box. You can specify which Fiery servers to connect to and monitor from this dialog box. If the Fiery is not in your local subnet, you can use Fiery Link options to manually configure a connection, or you can perform an advanced search to locate and connect to Fiery servers anywhere on the network. The procedures below describe locating and connecting to a Fiery server using manual and advanced search methods.

For information on using Fiery Link, see the *Printing Guide*.

NOTE: Fiery Link is supported over TCP/IP only.

TO CONFIGURE A CONNECTION TO FIERY SERVERS IN THE LOCAL SUBNET:

1. Launch Fiery Link by double-clicking its icon.

The Warning dialog box “No Fierys configured, please select a Fiery” appears.

2. Click OK.

The Edit My Fiery List dialog box opens, and all Fiery servers found appear in the Available Fierys area of the dialog box. If the Fiery is located on a different subnet an Error dialog box appears. Click OK to dismiss the dialog box and perform an Advanced IP search (page 87), or Advanced Subnet search (page 90) to locate the Fiery.

Fiery name, device name
(DC12), and IP address

Name	Device Name	IP Address
Aero	<device name>	10.10.10.101
Clarice	<device name>	10.10.10.102
Markey	<device name>	10.10.10.103

Name	Device Name	IP Address
------	-------------	------------

NOTE: Only servers that support Fiery Link appear in the Available Fierys area.

3. To add a server to the My Fiery List, select it and click the arrow button.

The server appears in the My Fiery List.

Repeat step 3 for each server you would like to add to the My Fiery List.

4. Click **Apply** to accept the changes to My Fiery List.
5. Click **OK**.

TO MANUALLY CONFIGURE THE CONNECTION FOR FIERY LINK:

1. Click the Manual tab. Enter the DNS name or IP address of the Fiery and click the arrow button.

Edit My Fiery List

AutoSearch Manual

New Fiery

Fiery DNS Name (or IP address)

Enter the Fiery name or IP address exactly as configured on the Fiery.

My Fiery List

Name	Device Name	IP Address
Aero	<device name>	100.100.100.100

When the arrow button is clicked, Fiery Link checks for the specified Fiery. If the server is found, it appears in the My Fiery List. If it is not found, an error message appears.

To add the server to the My Fiery List without confirming its existence on the network, hold down the Control key while clicking the arrow button.

2. To give the server a nickname, select it in the My Fiery List and click Modify.

3. Select Use Nickname, and enter a nickname for the Fiery.

The 'Modify Fiery Attributes' dialog box contains three sections. The 'Name' section has a text field with 'Aero'. The 'Use Nickname' section has a checked checkbox and a text field with 'Brad R's Clarice'. The 'Device Name' section has a text field with '<device name>'. At the bottom are 'OK' and 'Cancel' buttons.

4. Click OK.

The 'Edit My Fiery List' dialog box has two tabs: 'AutoSearch' and 'Manual'. The 'New Fiery' section has a text field for 'Fiery DNS Name (or IP address)' with 'Aero' and a note: 'Enter the Fiery name or IP address exactly as configured on the Fiery.' Below this is a downward arrow button. The 'My Fiery List' section contains a table with one entry: 'Brad R's Clarice' with device name '<device name>' and IP address '100.100.100.100'. Below the table are 'Modify...' and 'Remove' buttons. At the bottom are 'OK', 'Cancel', and 'Apply' buttons.

Name	Device Name	IP Address
Brad R's Clarice	<device name>	100.100.100.100

5. Click Apply to accept the changes to My Fiery List.
6. Click OK.

TO CONFIGURE THE CONNECTION FOR FIERY LINK USING AN ADVANCED IP SEARCH:

1. Click the AutoSearch tab.

The 'Edit My Fiery List' dialog box has two tabs: 'AutoSearch' (selected) and 'Manual'. Under 'AutoSearch', there are 'Refresh' and 'Advanced...' buttons. Below these is a table with columns 'Name', 'Device Name', and 'IP Address'. A large empty rectangular area is below the table. A downward-pointing arrow button is centered below this area. Below the arrow is a section titled 'My Fiery List' containing another table with columns 'Name', 'Device Name', and 'IP Address'. Below this table are 'Modify...' and 'Remove' buttons. At the bottom of the dialog are 'OK', 'Cancel', and 'Apply' buttons.

2. Click the Advanced button.

The 'Advanced Search' dialog box has two tabs: 'IP Range' (selected) and 'Subnet Addr.'. Under 'IP Range', there are 'From IP' and 'To IP' labels, each followed by four input boxes for IP address octets. Below these is a downward-pointing arrow button. Below the arrow is a table with columns 'IP Range / Subnet Addr.' and 'Parameter Type'. Below the table is a 'Remove' button. At the bottom of the dialog are 'Search' and 'Cancel' buttons.

3. To find all servers within a specified IP range, enter an IP Address in the From IP field, and an IP address in the To IP field, and click the arrow button.

The image shows a dialog box titled "Advanced Search". It has two tabs: "IP Range" (selected) and "Subnet Addr.". Under the "IP Range" tab, there are two sections: "From IP" and "To IP". The "From IP" section has four input fields containing "10", "10", "10", and "100". The "To IP" section has four input fields containing "10", "10", "10", and "254". Below these sections is a large downward-pointing arrow button. At the bottom of the dialog, there is a table with two columns: "IP Range / Subnet Addr" and "Parameter Type". The table contains one row with the value "10.10.10.100 - 254" in the first column and "IP Range" in the second column. Below the table is a "Remove" button. At the very bottom of the dialog are "Search" and "Cancel" buttons.

IP Range / Subnet Addr	Parameter Type
10.10.10.100 - 254	IP Range

Repeat step 3 for each range of IP addresses you would like to search.

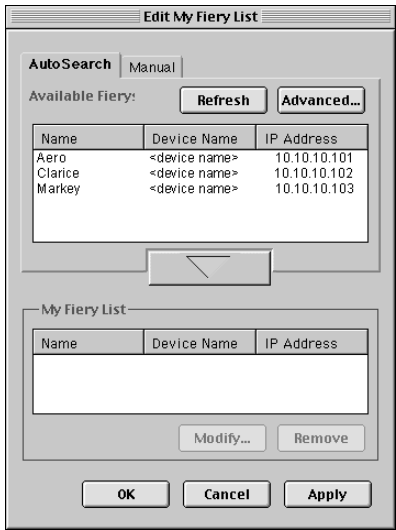

To remove an IP range from the list, select the range in the IP Range/Subnets window and click the Remove button.

You can also search for the Fiery using a range of subnet values. For more information see "To configure the connection for Fiery Link using an advanced subnet search:" on page 90.

4. **Click Search.**

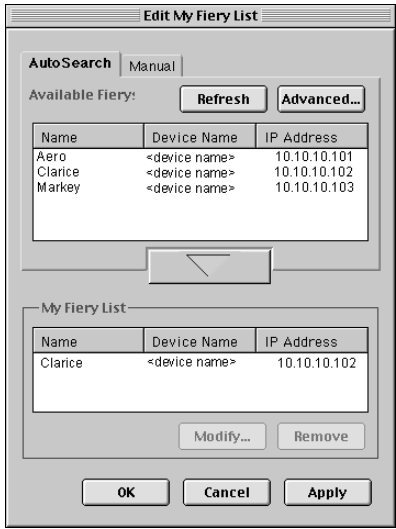

When the search is complete, all servers found appear in the Available Fierys area of the dialog box.

If the Fiery was not found, and you would like to search again using the same parameters, click Refresh.

NOTE: Only servers that support Fiery Link appear in the Available Fierys area.

5. To add a server to the My Fiery List, select it and click the arrow button.

The server appears in the My Fiery List.

Repeat step 5 for each server you would like to add to the My Fiery List.

6. Click **Apply** to accept the changes to My Fiery List.
7. Click **OK**.

**TO CONFIGURE THE CONNECTION FOR FIERY LINK USING
AN ADVANCED SUBNET SEARCH:**

1. Click the **AutoSearch** tab and click the **Advanced** button.

Edit My Fiery List

AutoSearch | Manual

Available Fierys

Refresh Advanced...

Name	Device Name	IP Address
------	-------------	------------

▼

My Fiery List

Name	Device Name	IP Address
------	-------------	------------

Modify... Remove

OK Cancel Apply

2. Click the Subnet Addr. tab.

The 'Advanced Search' dialog box has the 'Subnet Addr.' tab selected. It contains two rows of four input boxes each, labeled 'IP address' and 'Subnet Mask'. Below these is a downward-pointing arrow button. At the bottom, there is a table with two columns: 'IP Range / Subnet Addr.' and 'Parameter Type'. The table is currently empty. Below the table are 'Search' and 'Cancel' buttons, and a 'Remove' button is located above them.

3. Enter the IP address and subnet to search, and click the arrow button.

The 'Advanced Search' dialog box now has the IP address '10.10.10.250' and Subnet Mask '10.10.10.225' entered into the respective input boxes. The downward-pointing arrow button has been clicked. The table below now contains one row: '255.255.255.254' under 'IP Range / Subnet Addr.' and 'Subnet Addr.' under 'Parameter Type'. The 'Search' and 'Cancel' buttons are at the bottom, and the 'Remove' button is above them.

The IP address and subnet to be searched appears in the IP Range/Subnets list. Repeat this procedure for each IP address and subnet you would like to search.

To remove a subnet value from the IP Range/Subnets list, select it and click the Remove button.

4. **Click Search.**

When the search is complete, all servers found appear in the Available Fierys area of the dialog box.

If the Fiery was not found, and you would like to search again using the same parameters, click Refresh.

Edit My Fiery List

NOTE: Only servers that support Fiery Link appear in the Available Fierys area.

5. To add a Fiery server to the My Fiery List, select it and click the arrow button.

The server appears in the My Fiery List.

Repeat step 5 for each server you would like to add to the My Fiery List.

6. Click **Apply** to accept the changes to My Fiery List.
7. Click **OK**.

Configuring a connection for Fiery Downloader

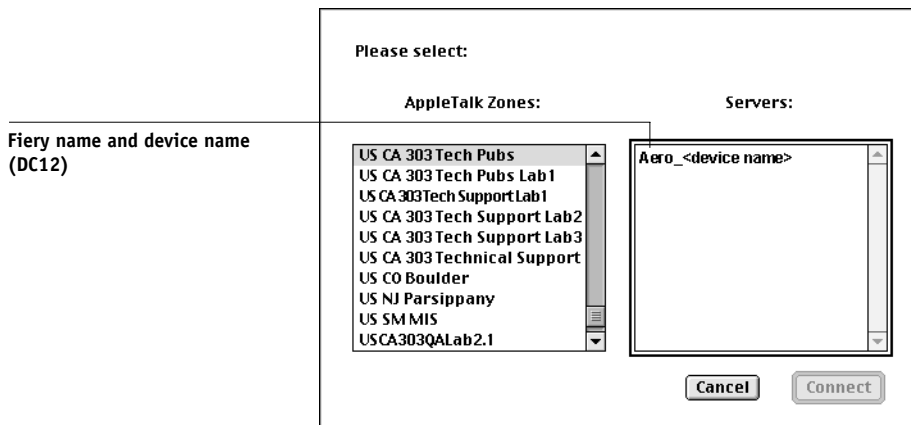

When you launch Fiery Downloader you must specify a Fiery to connect to.

BEFORE YOU BEGIN:

- Print the Configuration page from the Control Panel and note the AppleTalk zone of the Fiery.

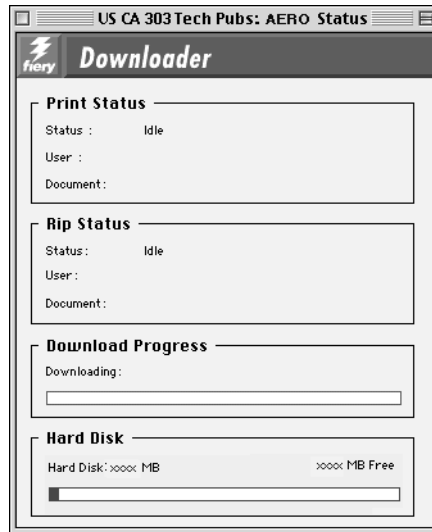

TO SPECIFY A FIERY TO CONNECT TO:

1. Double-click the Fiery Downloader icon.

2. Select the AppleTalk zone in which the Fiery is located from the AppleTalk Zones list.
The available servers appear in the Servers list.
3. Select the Fiery to connect to from the Servers list.
4. Click Connect.

5. The Fiery Downloader dialog box appears.

For information on how to use Fiery Downloader, see the *Printing Guide*.

Fonts

The Fonts installer on the User Software CD includes screen and printer fonts that correspond to the 136 built-in PostScript printer fonts on the Fiery. The Font installer copies both kinds of fonts to the System folder:Fonts folder on your hard disk. To be available to applications, the screen fonts must remain in the System:Fonts folder. The printer fonts can be copied to a folder of your choice.

NOTE: In the System:Fonts folder, when displayed by Kind, screen fonts appear as type “Font Suitcase” and PostScript printer fonts appear as type “PostScript™ font”.

TO INSTALL SCREEN AND PRINTER FONTS:

1. On the User Software CD, double click the Fonts icon to launch the Fonts installer.
2. Click Install.

By default the fonts are installed to the System folder:Fonts folder on your hard disk.

If you have any applications open, you must quit and relaunch them before the newly installed screen fonts are available.

Copying color files from the User Software CD

You can copy additional color files from the User Software CD to your hard disk. Many of the files are PostScript files that you can download and print using Fiery Downloader.

The User Software CD contains the following color files:

Color Files folder (inside the English folder)	<p>CMYK Color Reference.ps, an 11-page, letter-size PostScript file to use for reference when defining CMYK colors in applications.</p> <p>PANTONE Book.ps, a 19-page, letter-size PostScript file that indicates the closest equivalent of PANTONE coated colors that the Fiery and your particular copier model can produce. The method used to print the PANTONE Book.ps file differs depending on the Spot Color Matching setting. For more information, see the <i>Printing Guide</i> and the <i>Color Guide</i>.</p> <p>RGB page 01, a file you can print from Microsoft Word 97 or later to view available RGB colors.</p> <p>RGB page 02, a file you can print from PowerPoint 6.0 or later to view available RGB colors.</p>
Calibration folder (inside Color Files folder)	<p>Four PostScript measurements files of color patches: custom21.ps, custom.34.ps standard21.ps and standard34.ps. The numbers in the file names refer to the number of patches on the page. The Custom files are provided to enable you to download measurement patches that ignore the copier's current calibration set. The Standard files are provided to enable you to download standard measurement patches that ignore the copier's current calibration set. For information on how to use these files, see the <i>Color Guide</i>.</p>

NOTE: These files are provided for expert users and should not be used for day-to-day calibration.

Loading ICC profiles

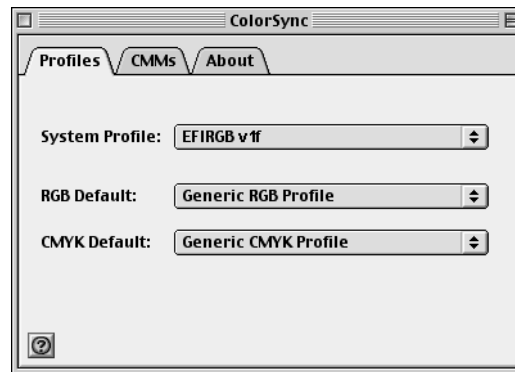

The ICC profiles installed by the ColorSync installer are for use with ColorWise Pro Tools and applications that support ICM standards.

These instructions assume you have already installed the ICC profiles included on the User Software CD. For more information, see “Installing Fiery software and fonts” on page 73.

NOTE: The internal name of an ICC profile may vary slightly from its file name.

TO SET THE COLORSYNC SYSTEM PROFILE:

1. Choose **Control Panels>ColorSync** from the Apple Menu.
2. Select **EFIRGB ICC v1f** from the System Profile list.

When selected as the ColorSync system profile, EFIRGB ICC v1f sets the optimal source color space for printing to the Fiery. The color space set by the EFIRGB ICC v1f profile is the same as that set by the EFIRGB setting of the RGB Source Profile print option.

NOTE: The RGB Source Profile print option setting overrides the ColorSync system profile setting.

3. Close the ColorSync window.

For more information about ICC profiles, see your application’s documentation.

Loading the monitor settings file

The EFIRGB ICC monitor settings file can be used in Photoshop, or other applications that support ICC profiles to define a source color space for printing to the Fiery.

NOTE: For best results, the monitor settings file should be installed if you use Fiery Scan.

TO LOAD THE MONITOR SETTINGS FILE IN PHOTOSHOP 5.0:

1. **Launch Photoshop.**
2. **From the File menu, choose Color Settings, and from the Color Settings submenu, choose RGB Setup.**
3. **In the RGB Setup dialog box, click Load.**

4. **Browse to the System folder: Preferences: ColorSync Profiles, select the EFIRGB v 1f file, and click Open.**

NOTE: If you are using ColorSync 2.5 or later, ColorSync profiles are located in System Folder: ColorSync Profiles.

The EFIRGB ICC v1f file appears as the selection in the RGB pop-up menu of the RGB Setup dialog box.

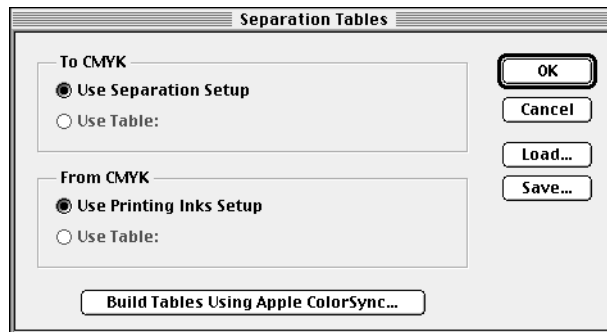

5. **Click OK.**

Loading the ICC copier profile

The ICC copier profile enables RGB-to-CMYK conversions that are specific to the kind of copier you are using.

TO LOAD THE ICC COPIER PROFILE IN PHOTOSHOP 4.0:

1. Launch Photoshop.
2. From the File menu, choose Color Settings>Separation Tables.
3. Click Build Tables Using Apple ColorSync.

4. In the CMS Settings dialog box, choose a profile and a render intent.

5. Click **Build**.6. Click **OK**.

TO LOAD THE ICC COPIER PROFILE IN PHOTOSHOP 5.0:

1. Launch Photoshop.
2. From the File menu, choose Color Settings, and from the Color Settings submenu, choose CMYK Setup.
3. In the CMYK Setup dialog box, choose ICC as the CMYK color model.
4. Select the profile that corresponds to the Fierly from the Profile pop-up menu.

5. Click **OK**.

For more information about ICC profiles, see your application's documentation.

Downloading Installers with Fiery WebTools

Fiery WebTools allow you to manage your Fiery remotely from the Internet or your company's intranet. The Fiery has its own home page, from which you can select from a variety of functions, including Status, WebSpooler, WebLink, Installer, WebDownloader, and WebSetup.

NOTE: WebSetup is not supported on Mac OS.

For more information on using Fiery WebTools, see the *Printing Guide* and the *Job Management Guide*.

Setting up Fiery WebTools

In order for network users to access and use Fiery WebTools, you need to set certain Fiery options in Network Setup and Printer Setup. You also need to prepare each user's workstation to communicate with the Fiery over the Internet or intranet.

For more information about Network Setup, see the *Configuration Guide*.

TO SET UP FIERY WEBTOOLS ON THE FIERY:

1. Set Enable Ethernet to Yes in Network Setup>Port Setup>Ethernet Port Setup.
2. Set Enable TCP/IP for Ethernet to Yes in Network Setup>TCP/IP Ethernet Setup.
3. Set Enable Web Services to Yes in Network Setup>Network Service Setup>Web Services Setup.
4. Exit Network Setup and choose OK to Save Changes.
5. Exit Printer Setup and choose OK to Save Changes.

TO SET UP CLIENT WORKSTATIONS TO USE FIERY WEBTOOLS:

1. Enable TCP/IP networking.
2. Make sure the workstation has a valid, unique IP address.

3. Make sure the workstation is installed with one of the following Internet browsers:

Windows 95/98 and Windows NT 4.0—*Either* Netscape Communicator v4.5 or later *or* Microsoft Internet Explorer v4.0.1 and SP1, or later

Mac OS—Netscape Communicator v4.5 or later, or Internet Explorer v4.0.1 or later, with Java enabled.

NOTE: Netscape and Microsoft continue to release frequent updates to their browsers. As support cannot be guaranteed for all versions, use the versions specified above for best results.

4. Make sure Java is enabled in your Internet browser.

For more information on setting up the Fiery and your network, see the *Configuration Guide*.

Using the Installer WebTool

The Installer WebTool allows you to easily download printer drivers or Fiery Link directly from the Fiery to your workstation.

TO DOWNLOAD THE PRINTER FILES OR FIERY LINK WITH THE INSTALLER WEBTOOL:

- 1. Launch your Internet or intranet browser and enter the DNS name or IP address of the Fiery.**
- 2. Select a login level, enter a password if necessary, and click OK.**

The Log In dialog box appears only if the administrator has set a password. No password is required to log in as Guest. You have full access to the Installer WebTool when logged in as Guest.

3. Click the Installer button.

4. Under the name of your operating system, click "Printer Files" or "Fiery Link".

For Windows computers, a dialog box appears, prompting you to save the file to the location you choose.

For Mac OS computers, a folder named "Printer Driver" or "Fiery Link" is downloaded to the desktop in a BinHex-encoded, compressed format. If your internet browser is equipped with an expander utility, such as StuffIt Expander, the folder is decoded and decompressed automatically.

5. **For Windows computers, browse to the location where you want to save the Prntdrv.exe file or the Fiery Link.exe file and click Save.**

For Mac OS computers, if the Printer Driver or Fiery Link folder was not automatically decoded and decompressed, launch a utility that performs that function.

6. **For Windows computers, double-click the Prntdrv.exe file or Fiery Link.exe file, browse to the location where you want to install the folder, and click Next.**

The folder is installed to the location you specified.

7. **Install the appropriate printer driver for your operating system.**

For instructions on installing the printer driver for:	See:
Windows 95/98	“Setting up PostScript and/or PCL printing with Windows 95/98” on page 1
Windows NT 4.0	“Setting up PostScript and/or PCL printing with Windows NT 4.0” on page 22
Mac OS computers	“Setting up the Fiery as a PostScript printer” on page 69

Troubleshooting

This chapter provides troubleshooting tips.

On a Windows computer

Setting up printing on Windows NT 4.0 Workstations

If you have problems installing the Fiery with Windows NT 4.0, try installing another PostScript printer (such as the Apple LaserWriter IIg), and then install the Fiery. Installing another printer ensures that all files are properly installed and available. For instructions, see your Windows NT 4.0 documentation.

For additional information about problems you may encounter using the Adobe Printer Driver for Windows NT 4.0, see the Adobe README file (ReadMeNT.txt) included in the prntdrv folder on the User Software CD.

Reinstalling the Adobe PostScript Printer Driver on Windows 95/98

If you are reinstalling the Adobe PostScript Printer Driver, delete any previous versions and related files before installing. Search for and delete all files named Efax*. * in the Windows\System folder.

For additional information about problems you may encounter using the Adobe Printer Driver for Windows 95/98, see the Adobe README file (ReadMe9x.doc) included in the prntdrv folder on the User Software CD.

Problems with the Fiery utilities on Windows 95/98 or Windows NT 4.0

1. **If you are using Windows 95/98, make sure that IPX/SPX and TCP/IP networking protocols are both enabled.**

See “Completing the Windows 95/98 IPX/SPX or IPX (Novell) connection” on page 16.

2. **If you are using Windows NT 4.0, make sure the TCP/IP networking protocol is enabled.**

3. **Make sure the connection is configured correctly for your site.**

To check the current configuration, launch a Fiery utility and choose Open from the File menu. Select the Fiery and click Modify to see current settings. If the settings are incorrect, you can change them in this dialog box.

On a Mac OS computer

Setting up the Fiery in the Chooser

If auto-setup does not work and you are prompted to select the PPD, select the appropriate Fiery file in your System:Extensions:Printer Descriptions folder.

Select “Fiery X12 Color Server PS” or “Fiery EX12 Color Server PS.”

Installing screen fonts

If you experience problems installing the PostScript screen fonts from the User Software CD to the System:Fonts folder, try the following:

1. **Quit all applications and close all windows.**
2. **Create a new folder and name it “Uninstalled Fonts.”**
This folder must be located outside of the System folder.
3. **Move fonts that you are not using from the System:Fonts folder to the Uninstalled Fonts folder.**
4. **Install the fonts from the User Software CD to a folder called CD fonts. Copy the fonts to the System:Fonts folder.**
5. **Create an aliases to the System:Fonts folder and the Uninstalled Fonts folder.**
6. **Place both aliases on your desktop.**
7. **When necessary, use the aliases to open both folders and move fonts between them.**

If you have any applications running, you must quit and relaunch them in order to view and use the newly installed fonts.

Alternately, you can try combining fonts from multiple suitcases into a single suitcase.
