Release Notes

Release Notes V5.0 contains a description of all of the features added to previous versions as well as the Bug Status and Hints, Tips and Special Instructions reports.

Feature Descriptions: Usability

Launch Pad to Job / Order Submission

FreeFlow Web Services 5.0 provides a “launch pad” whereby the following workflows or tasks can be initiated:

- Print Documents from Our Catalog

A wizard that enables the user to create a new Job based on templates that have been organized by the Print Provider within specific catalogs. The user can then receive an online quote and place the order

- Print Documents from Your Computer

A wizard that enables the user to create a new Job by forwarding, to the Print Provider, specific Job files and parameters. The user can then receive an online quote and place the order

- Order a Book Assembly (offered by Print Providers who have access to *Book Assembly*, an independent option not included in the basic *FreeFlow Web Services* package)

Opens the *Book Assembly* workflow, which enables assembling “Book-type” Jobs from independent files. When the *Book Assembly* Job has been assembled, the user can then receive a quote and place the order.

Note: When the *Book Assembly* is not offered by the Print Provider, the *Order a Book Assembly* option does not appear in the launch pad and the *Order Status* option is automatically shifted to left-center.

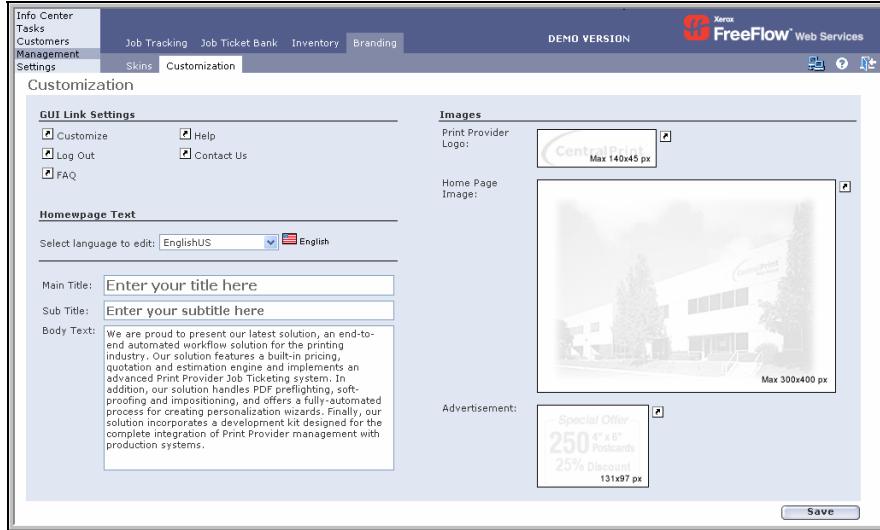

- View Order Status

By clicking on *Go*, the user is automatically transferred to the *Shopping Cart* where the Jobs can be deleted, put on hold by being transferred to the *Saved Jobs* queue, or where the user can simultaneously order all of Jobs in the queue.

Benefits:

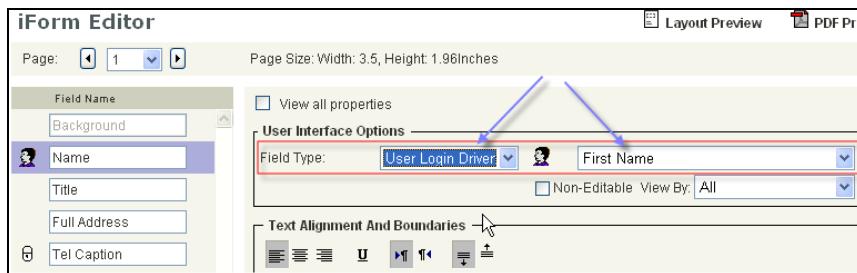

- Dramatic reduction in workflow options available to the Print Buyer. The Print Buyer encounters an extremely user-friendly and convenient system
- Allows the Print Buyer to move numerous Jobs to an easily accessible *Shopping Cart* from where the orders can be simultaneously carried out

Branding

The *Home Page* customization wizard has been moved from *Settings/Site* to *Management/Branding*, a location more suited to the type of activity that is carried out. The *Home Page* customization wizard has also been modified with the aim of being more intuitive and user-friendly.

Auto Populate

Auto Populate, which has been created for Print Buyers of varied levels of expertise (including Corporate users), enables automatically populating information fields with the logged-in user's information. By this feature, the workflow can be streamlined and typographical errors can be reduced.

Image Editing

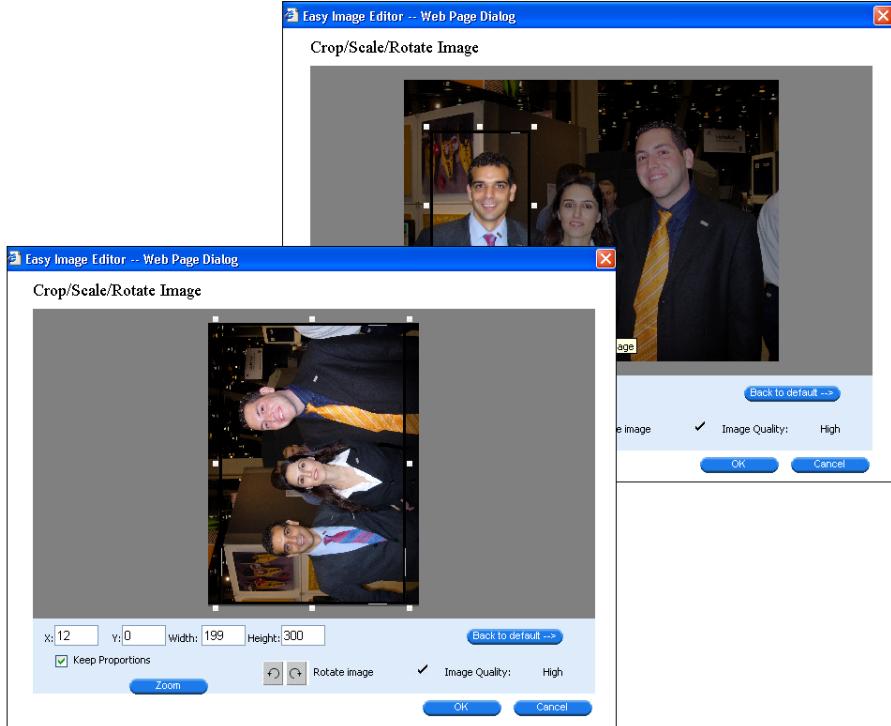

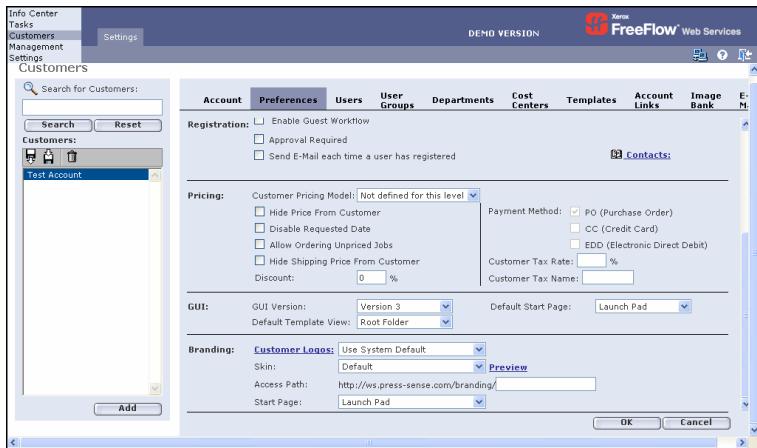

Image Editing, designed for Print Buyers ordering Jobs from image-intensive templates, simplifies cropping, scaling and rotating images that have been uploaded into the *FreeFlow Web Services* system.

Image Editing is especially suited for Print Buyers who must upload numerous images that must fit into template image fields (i.e. Real Estate agents uploading property images).

GUI Preferences

In the *Customers/Settings Preferences* panel, the *GUI* sub-panel has been added. The *GUI* sub-panel enables the Print Provider to determine the following issues at the customer level:

- GUI Version
- Default Template View
- Default Order Jobs Page

Default Template View

Default Template View dropdown box provides the following three options:

Root Folder Enables selecting the top folder in the *Template* bank as the folder that the Print Buyer user accesses when initiating a Job from the *Template* bank.

Specific Folder Enables selecting a specific folder in the *Template* bank as the folder that the Print Buyer user accesses when initiating a Job from the *Template* bank.

Catalog Enables selecting a specific catalog in the *Template* bank as the catalog that the Print Buyer user accesses when initiating a Job from the *Template* bank.

Default Order Jobs Page

The *Default Order Jobs Page* enables determining which of the following *Order Jobs* pages appears when the Print Buyer user enters the system:

Launch Pad *Order Jobs* page that provides the user with two intuitive wizards for creating Jobs.

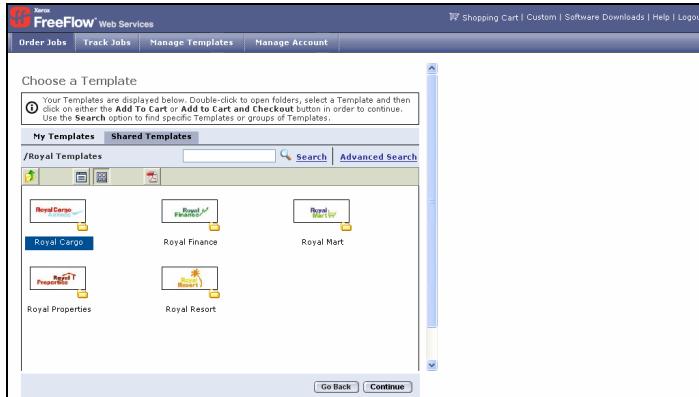

Simple *Order Jobs* page that allows users to create Jobs by either uploading files or by accessing template.

Advanced *Order Jobs* page that provides the user with intuitive wizards as well as the ability to either upload files or access templates in order to create new Jobs.

Template View *Order Jobs* page that provides the user only with templates for creating Jobs.

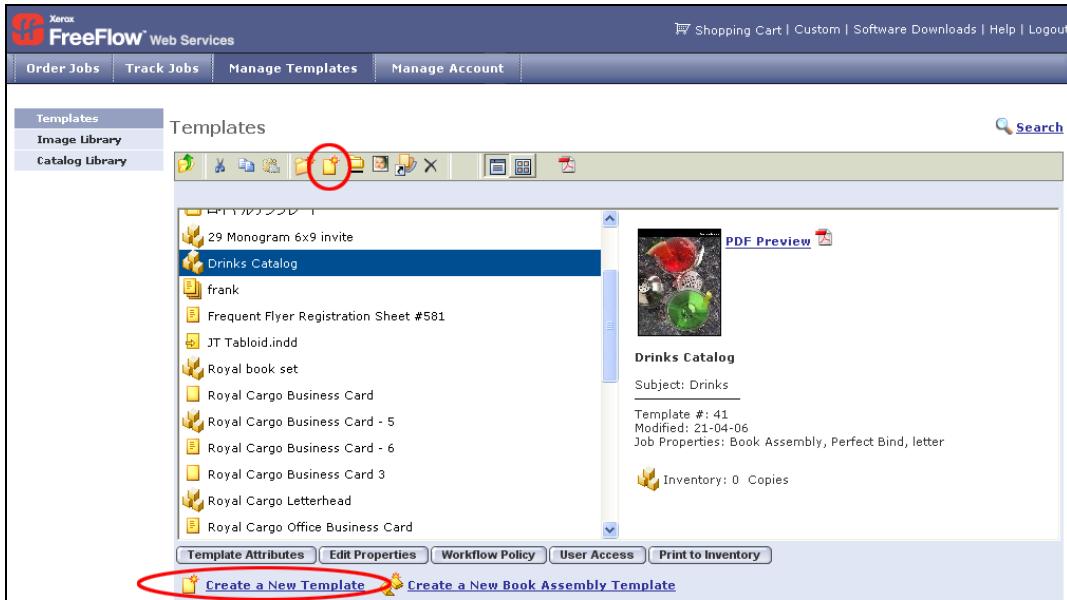

Coherence: Look and Feel

In order to reflect the new workflow concepts, *FreeFlow Web Services* displays a more user-friendly and intuitive Print Buyer interface.

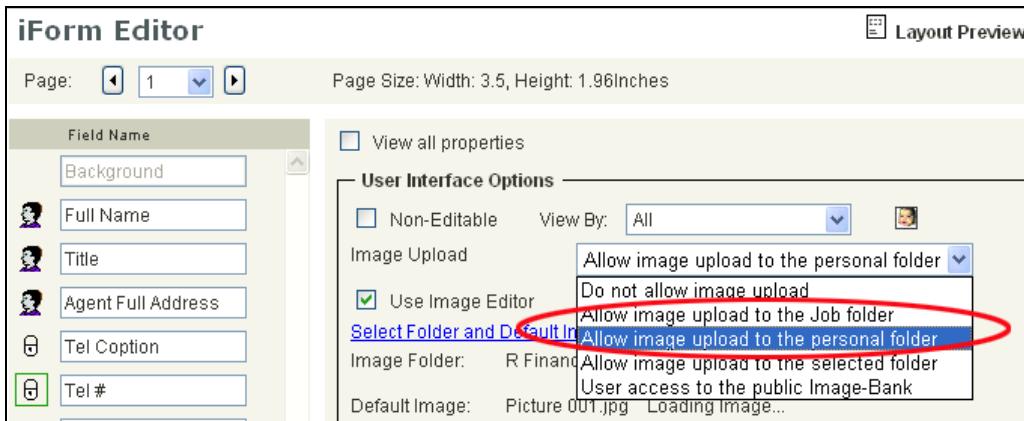

Feature Descriptions: Enhancements

Adding Templates to the Template Bank

The *Create a New Template* button has been transferred from the *Launch Pad* to the *Manage Templates* window. For the user, this simplifies the *Launch Pad* and places the *Add Catalog* functionality in a more suitable place, together with all of the other *Template Bank* toolbox tools.

Personal Folder/Selected Folder

FreeFlow Web Services 5.0 includes a new *Image Upload* option that allows users to upload images to personal folders. In addition, FreeFlow Web Services 5.0 enables users to browse to a specific folder for image storage.

Book Assembly

The screenshot shows the Xerox FreeFlow Web Services interface. At the top, there's a navigation bar with links for Order Jobs, Track Jobs, Manage Templates, and Manage Account. On the right side of the header, there are links for Shopping Cart, Custom, Software Downloads, Help, and Logout. The main content area has a title "Book Assembly: Introduction". On the left, a section titled "What can you do?" features a photo of a person sitting at a desk, looking at some papers. Below the photo are four icons labeled "Reports", "Booklets", "Presentations", and "Manuals". On the right, a section titled "How? Very Simple" lists three steps: 1. Compose: Using the Book Assembly wizard; 2. Preview: Using the Book Assembly PDF Preview (with a link to "Click here to view a sample Book Assembly PDF Preview"); 3. Order and track the Book Assembly Job. At the bottom right of the main content area are "Go Back" and "Start Printing" buttons.

What can you do?

Reports Booklets Presentations Manuals

How? Very Simple

1 Compose: Using the Book Assembly wizard

2 Preview: Using the Book Assembly PDF Preview
[Click here to view a sample Book Assembly PDF Preview](#)

3 Order and track the Book Assembly Job

Skip this page the next time I order a **Book Assembly** Job.

The *Book Assembly* workflow has been improved with the introduction of an extremely intuitive wizard that enables the user to easily and quickly:

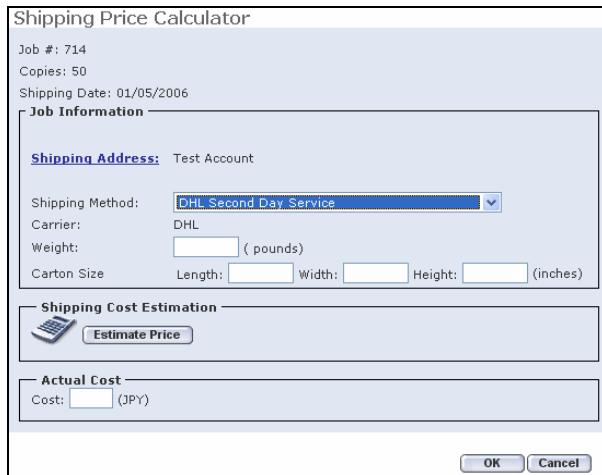

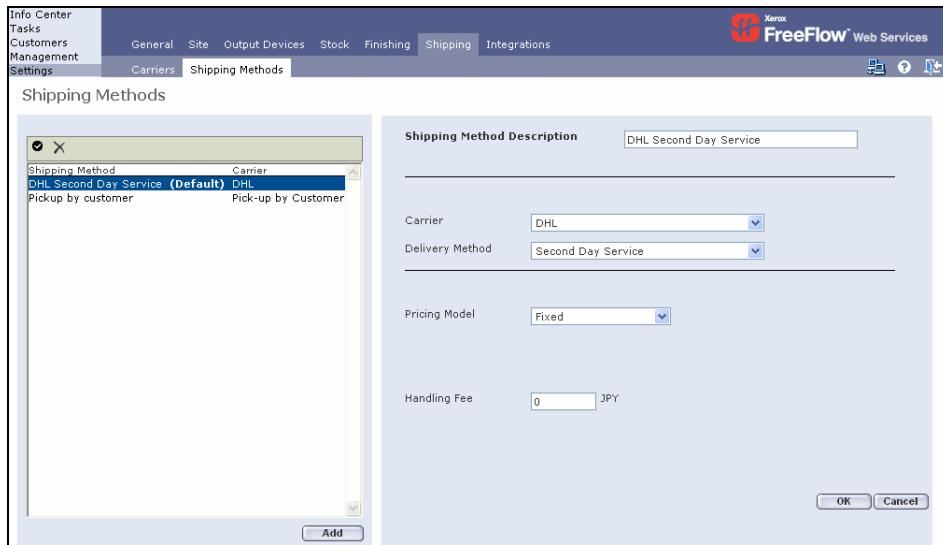

- Upload the various files that will be integrated into the *Book Assembly* Job
- Determine binder style and page size
- Compose the entire *Book Assembly* Job
- Send the completed Job to the *Shopping Cart*

Style Management enables *Template Editors* to save field styles and easily reapply these styles in other fields.

Note: *Book Assembly* is an optional module that is not included in the basic *FreeFlow Web Services* package.

Feature Descriptions: Fulfillment

Integration with Delivery Companies/Shipping

FreeFlow Web Services 5.0 facilitates integration with such carriers as FedEx, USPS and UPS in order to enable receiving online shipping costs and schedules and to track the movement of the shipments.

Tax Calculation and Multiple Tax Levels

The *Tax Calculation* feature enables improved tax handling features for the FreeFlow Web Services 5.0 system. The *Tax Calculation* feature supports an additional destination tax layer, which can be used for handling such issues as the US state tax as well as defining multiple tax levels.

Inventory Control

The screenshot shows the FreeFlow Web Services interface with the 'Inventory' tab selected. The main area displays a search results table for templates:

Template #	Template Title	Risk Inventory	Customer Inventory	Folder Name	Creation Date
3	Royal Cargo Letterhead	0	0	Royal Cargo	03/04/2005 15:09:02
108	Royal Cargo Letterhead	500	1000		20/04/2006
117	Royal book set	0	0		21/04/2006
126	Royal Cargo Business Card	0	0		23/04/2006

Below the table, a specific template entry for 'Royal book set' is expanded, showing its details and a preview:

Royal book set
 Author:
 Subject:
 Ref. Code:
 ISBN:
 Created: 04-09-07 00:00
 Modified: 04-09-07 10:51

Template #117
 Type: Book Assembly
 Subtype:
 Colors: process
 Pages: 430
 Page Size: portrait, W:8.2677, H:11.6929Inches

Inventory Information: 0 Copies

Buttons at the bottom include: Template Attributes, Edit Properties, Workflow Policy, Pricing, and Quantity.

FreeFlow Web Services 5.0 supports an *Inventory Control* (Fulfillment) system whereby inventory is "pulled" from previously produced printed template items. With *Inventory Control*, the Print Provider can determine whether copies of a specific Job exist in the inventory and, if not, enables creating a *Reprint* request that can bring the number of inventory copies to the desired level.

The screenshot shows the FreeFlow Web Services interface with the 'Production' tab selected. On the left, the 'Approval Queue' and 'Thumbnail Job Details' sections are visible, listing various jobs with their details and status icons.

A central 'Job Info' panel is open, showing a detailed view of a job. A modal dialog box titled 'Inventory Information -- Web Page Dialog' is displayed over the main interface, containing the following information:

Customer Inventory:	1000
Risk Inventory:	500
Total:	1500
Inventory Location:	AD2-E
Min in Inventory:	200

At the bottom of the dialog, there are 'OK' and 'Cancel' buttons. The URL <http://ws.press-sense.com/newsweb> and an Internet icon are also present.

Adobe Acrobat Support

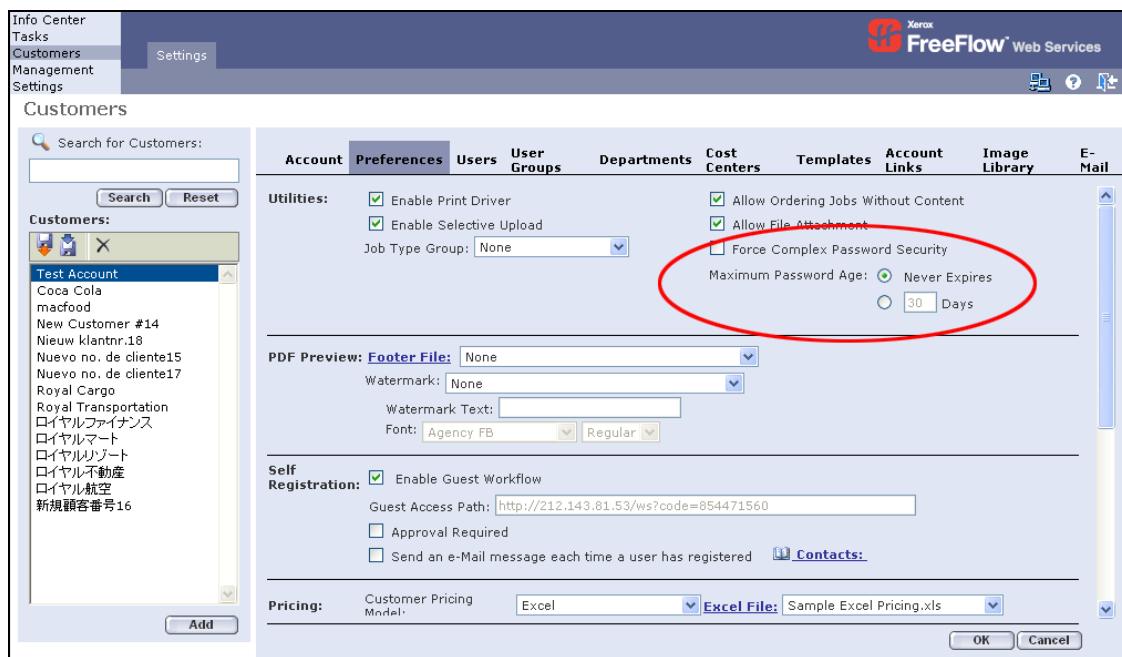

In addition to *Adobe Acrobat 7.0*, *FreeFlow Web Services 5.0* now supports *Adobe Acrobat 7.0 Professional*.

Security Enhancements – Password Protection

As security concerns and expectations gain greater attention worldwide, critical vulnerabilities have been addressed, in order to provide a much more secure product.

Such enhancements to security are:

- Strengthening of login and authentication capabilities
- Non-admin users will be able to change their own account passwords

Groups

On the Print Buyer side, under the *Manage Account/User Groups* tabs, the *User Groups* window has been added to the interface. The same window is found on the Print Provider side, under *Customer/Settings/User Groups*.

The *User Groups* window enables creating both user groups as well as groups of users within the Print Buyer organization. With *User Groups*, an “Everyone” group enables describing default behavior for unassigned users/groups.

Note: 1. A user can belong to more than one group.

2. Presently *Groups* is used in connection with *Access Control List* (see below).

Access Control List (A.C.L.)

ACL has been created for use by simple users; those users that do not have the *Manage Templates* privilege.

Only *No Access* and *Read* accesses will be implemented. In order to add to the user more access control (i.e. Write, Manage), the *Manage Templates* privilege must be assigned to the user.

No Access

With *No Access*, the user cannot locate the *Template/Folder* in the browser and cannot locate templates using the *Search* option.

Read Access

With the *Read Access*, the user can locate the *Template/Folder* in the browser and can locate the template using the *Search* option.

- Notes:**
1. The user's *Access Control* will overwrite the group's *Access Control* (i.e. if the user has *Read Access* control and group to which this user belongs to has *No Access* control, this user will have *Read Access* control).
 2. By default, all *Templates/Folders* have *Read Access* control.

User-Field Customization

In previous versions, *User* contact details and addresses had a fixed number of fields. Since Print Providers may require the ability to add and remove user fields (e.g. Mail Stop, FX name pronunciation field, removal/renaming of address fields for small companies, etc ...), the ability to add/edit field names has been added. This new ability will assist the Print Provider in accommodating specific customer requests and will enable the Print Provider to improve support for locale and special market segments.

The screenshot shows the 'Customize Contact and Address Fields' page in the Xerox FreeFlow Web Services interface. The top navigation bar includes links for Info Center, Tasks, Customers Management, General, Site, Output Devices, Stock, Finishing, Shipping, Integrations, System, Pricing, E-Mail, Production, Paper Sizes, Languages, Fonts, Privileges, Job Expiration, and Customize Fields. The 'Customize Fields' link is highlighted.

Contact Information

Visible	Field Name	Field Caption
<input checked="" type="checkbox"/>	FirstName	First Name
<input checked="" type="checkbox"/>	LastName	Last Name
<input checked="" type="checkbox"/>	JobTitle	Job Title
<input checked="" type="checkbox"/>	CompanyName	Company
<input checked="" type="checkbox"/>	Phone	Phone
<input checked="" type="checkbox"/>	Mobile	Mobile

Address Information

Visible	Field Name	Field Caption
<input checked="" type="checkbox"/>	ExtendedAddress	Address Line 2
<input checked="" type="checkbox"/>	ZipCode	Zip/Postal Code
<input checked="" type="checkbox"/>	Street	Address Line 1
<input checked="" type="checkbox"/>	City	City
<input checked="" type="checkbox"/>	State	State
<input checked="" type="checkbox"/>	Country	Country

Buttons at the bottom include 'Move Up', 'Move Down', and 'Reset Defaults'.

New and/or Occasional Users

The screenshot shows the FreeFlow Web Services login interface. At the top left is the FreeFlow logo with the text "FreeFlow® Web Services". At the top right is the text "Powered by Press-sense®". Below the logo is a descriptive text block: "FreeFlow® Web Services provides a Web storefront for your customers to submit new jobs and reorder existing ones in a secure environment from virtually anywhere. Jobs are quickly and easily transitioned into production or into other FreeFlow services, reducing errors and simplifying the fulfillment process." To the left of the main content area is a "Login to your Account" form with fields for "User Name" and "Password", and a "Login" button. To the right of the form are three links: "Forgot Your User Name or Password?", "Sign up for a Free Account", and "Login as a Guest". Below the login form is the Xerox logo. At the bottom of the page is a copyright notice: "Copyright © 2001-2006 Xerox Corporation. All rights reserved. XEROX® and FreeFlow® are registered trademarks of XEROX CORPORATION in the United States and/or other countries." It also includes a trademark notice: "Copyright © 2001-2006 by PRESS-SENSE LTD. All Rights Reserved Worldwide. | Trademarks". Below these notices are language selection buttons for various languages: Nederlands, English, Français, Deutsch, Hebrew, Italian, Japanese, Portuguese, and Español.

FreeFlow Web Services 5.0 offers two workflow possibilities for new and/or occasional users:

- Sign up for a Free Account
- Login as a Guest

Sign Up For a Free Account: Self-registration

This screenshot shows the "Registration: Personal Details" form. The form is divided into several sections: "Personal Details" (with fields for Login Name, Password, and Password Confirmation), "Contact Information" (with fields for First Name, Last Name, Job Title, Company, Phone, Mobile, Fax, and E-Mail), and "Address" (with fields for Address Line 1, Address Line 2, City, State, Zip/Postal Code, Country, and Address Notes). There is a note at the bottom stating "* Mandatory Field". At the bottom right are "OK" and "Cancel" buttons.

A workflow is now available for users who decide not to log in to the system.

Users that do not log in will be requested to login or self-register only after activating the *Checkout* in the *Shopping Cart*. The benefit of this workflow is that new and or occasional Print Buyers, called *Guests*, can work with system without having to commit to the Print Provider. This will serve as an incentive to potential Print Buyers become familiar with the *FreeFlow Web Services* system.

Login as a Guest

When self-registration is enabled, the system generates a special URL with a code for accessing *FreeFlow Web Services*. A *Guest* privilege is then created within the system.

Any user, who chooses to enter as a *Guest* instead of logging in, will be assigned a *Guest User* privilege.

Print Provider:

- Defines, per account, whether a self-registered user has to be approved by the Administrator; when *Approval Required* has been selected for a *Customer* account, the self-registered users will not be able to checkout of their *Shopping Cart* until the deal has been approved by the Administrator
- Has *Notification e-Mail* capabilities, where notification will be sent to predefined *e-Mail* addresses
- Can provide *New-user Approval* using the *Notification e-Mail*

Guests:

- Awaiting approval, will appear, clearly marked, in the users list of the Customer's account
- Using the *Shopping Cart*, will be limited to a scope of one session
- Where possible, will be able to retrieve forgotten passwords
- Will be able to specify one shipping/billing address during registration
- Will be able to supply different addresses for shipping and/or billing during checkout

Print Driver for Mac¹ and PC

The *FreeFlow Web Services Print Driver* enables the Print Buyer to place an order directly from any professional work environment (i.e. *Freehand*, and *PhotoShop*) that is activated within the *PC/Mac* operating system, to the Print Provider *Production* queue, acting as the direct pipeline between the Print Buyer desktop and the Print Provider.

In order to work with the *Print Driver*, the Print Buyer must:

- Have a *FreeFlow Web Services 5.0* account (Username and Password)
- Install the *Print Driver* on the *Client* computer (the *Print Driver* is supplied by the Print Provider and can be downloaded from the *FreeFlow Web Services 5.0 Download Page*)

Note: When installing the *Print Driver* on the *Client* computer, a new printer, bearing the Print Provider's name, is added to the list of printers found in the system.

¹ The FreeFlow Web Services Driver supports OS 10.2 and higher versions

Browser Support on the Mac and PC

Version 5.0 includes support for the leading market Web browsers: *Safari* and *Firefox* on *Macintosh* operating system and *Netscape V8.0* and *Firefox* on the *Windows* operating system.

- Note:**
1. *Mac* is not supported on the Print Provider side and does not support *Selective Upload* and *Modify PDF* options at this time.
 2. *Netscape V8.0* is not supported on the *PC* at this time.

Font Support

Version 5.0 supports both *OTF fonts (Open Type Fonts)* and *TTC fonts (True Type Fonts)*.

XMPie Integration

The *FreeFlow Web Services* workflow has been integrated with the *XMPie* workflow, enabling *FreeFlow Web Services* users to:

- Instantly have all *Dynamic Publishing* campaigns, created using *PersonalEffect*, available within the *FreeFlow Web Services* workflow
- Access, customize and order VI campaigns directly from *FreeFlow Web Services*
- Have dynamic proofing and the generation of all VI output formats, which are supported in *PersonalEffect*, available directly from *FreeFlow Web Services*, in a completely transparent way
- Provide their customers with an integrated, online solution that places the Print Provider at the center of all relevant media campaign information

Integration with Hagen OA

As Print Job volume increases together with the increase in Print-On-Demand, *Xerox* has come to recognize a growing need in the printing industry for the integration of *FreeFlow Web Services* with a leading *MIS* program. Towards satisfying this need, *Xerox* has integrated *FreeFlow Web Services* with *Hagen OA*.

Various solutions for the Printing industry exist in today's market but each solution tends to concentrate on a specific aspect of the Print Provider workflow. By installing these various solutions, the Print Provider is apt to decentralize Job management to the extent that the workflow becomes manual and error-prone.

A major benefit of the *FreeFlow Web Services /Hagen OA* integration is the establishment of a central focal point, at the Print Provider site, for the automatic management of all of the Jobs. In addition to decreasing Job processing time and errors, a centralized and automatic workflow eliminates the need to enter data independently for each system, thereby further reducing operation costs as well as reducing the possibility of additional errors and their accrued costs.

An integrated *FreeFlow Web Services /Hagen OA* module also enables unifying the Print Provider web workflow with the internal workflow and provides *Hagen OA* users with the ability to automatically create new customers in *Hagen OA*, through *FreeFlow Web Services* .

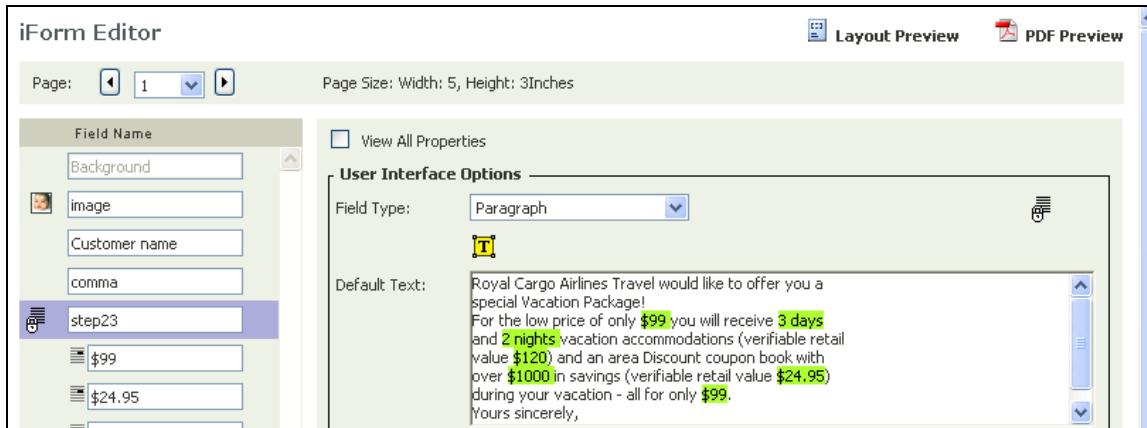

In practice, the integrated system will function as follows:

- 1** A Job is ordered through the *FreeFlow Web Services* system; the Job specifications are automatically communicated to the *Hagen OA* system.
- 2** A Job is automatically created in *Hagen OA* and will be priced according to the standard *Hagen OA* workflow. Once the price is determined, it will be sent back to *FreeFlow Web Services* and will appear in the Print Buyer's *Shopping Cart*.
- 3** From this point, any new information and/or status changes of the Job, within *FreeFlow Web Services* , will be shared in *Hagen OA*.

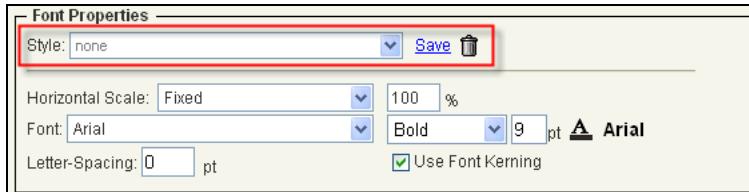

Note: *Hagen Integration* is an option that is not included in the basic *FreeFlow Web Services* package.

Paragraph Reflow

Paragraph Reflow allows the Print Buyer to edit an entire paragraph, whereby the text realigns itself within the textbox frame. In addition, *Paragraph Reflow* enables the injection of VI information into paragraph while maintaining the paragraphs original flow.

Style Management

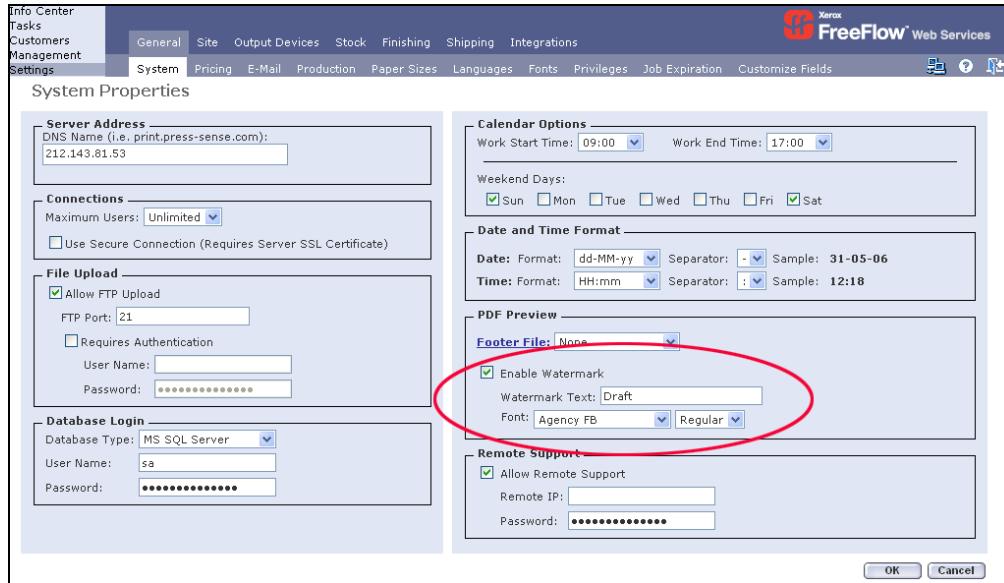

Style Management enables *Template Editors* to save field styles and easily reapply these styles in other fields.

Support for the Uploading of New File Formats

Server- side conversion to PDF enables the Print Buyer to upload native format files to the *FreeFlow Web Services 5.0* system. With server- side conversion to PDF, the Print Buyer can carry out the task of converting the native graphic files to PDF without having any knowledge of defining the *PDF* settings and without having the *Acrobat Distiller* installed on the computer. After the native files are uploaded to the system, the files are converted to *PDF* on the server itself.

FreeFlow Web Services 5.0 supports the upload and conversion of new file formats: *Microsoft Excel*, *Adobe-InDesign/Illustrator*, and *Photoshop*.

Watermarks

In order to prevent the misuse of PDF proofs, the Print Provider can now add watermarks to all PDF proofs accessed by the Print Buyers. This can be carried out on a system level from *Settings/General/System* or per customer, from *Customers/Settings/Preferences*.

Customers Tab

The *Customers* tab has been removed from the *Management* window and now appears as an independent tab in the *Tab Menu*.

Login Page

FreeFlow® Web Services provides a Web storefront for your customers to submit new jobs and reorder existing ones in a secure environment from virtually anywhere. Jobs are quickly and easily transitioned into production or into other FreeFlow services, reducing errors and simplifying the fulfillment process.

The *Forgot Your Username or Password?* link has been added to the *Login Page*.

Forgot Your Username or Password? Link

Forgot Your Username or Password?

Enter the e-Mail address associated with your account:

[Go Back](#) [Continue](#)

After clicking on Continue, an e-Mail message containing your Username and Password will be sent to you.

The *Forgot Your Username or Password?* link accesses a window that alerts the Print Provider to send the user's password and username to the e-Mail address associated with the users account.

Language Support

The *FreeFlow Web Services* user-interface is available with support for the following languages

- Dutch
- English
- French
- German
- Italian
- Japanese
- Portuguese (South American)
- Spanish (International)

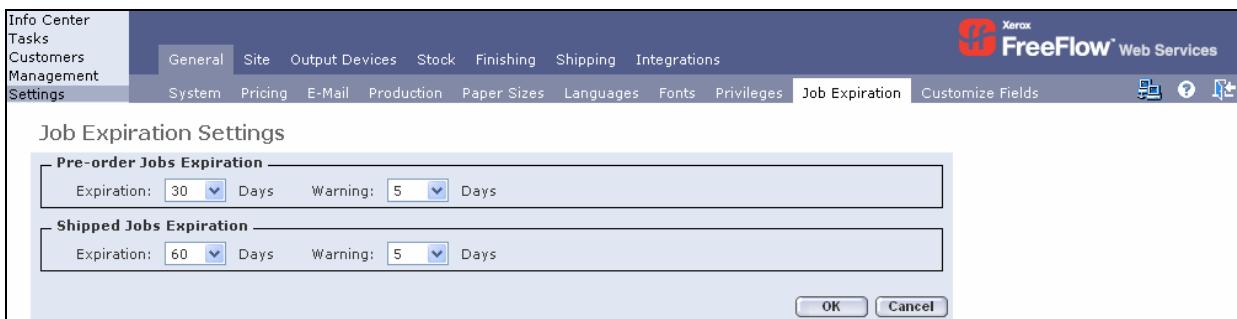

Job Expiration

In previous versions, Jobs were stored indefinitely in such transient areas as the *Design* and *Ready to Order/Shopping Cart* queues. In addition, while printed and shipped Jobs were removed from the list, the Jobs were stored indefinitely.

Job Expiration has been designed to prevent the buildup of transient Jobs as well as prevent a buildup of obsolete Jobs (i.e. Jobs that were printed/shipped) on the server.

To this end, every Job with *Design*, *Ready to Order (Shopping Cart)* and *Shipped* status will be automatically assigned an expiration date.

Note: The expiration time for Jobs with pre-order status (*Design* and *Ready to Order/Shopping Cart*) will be defined by the Print Provider.

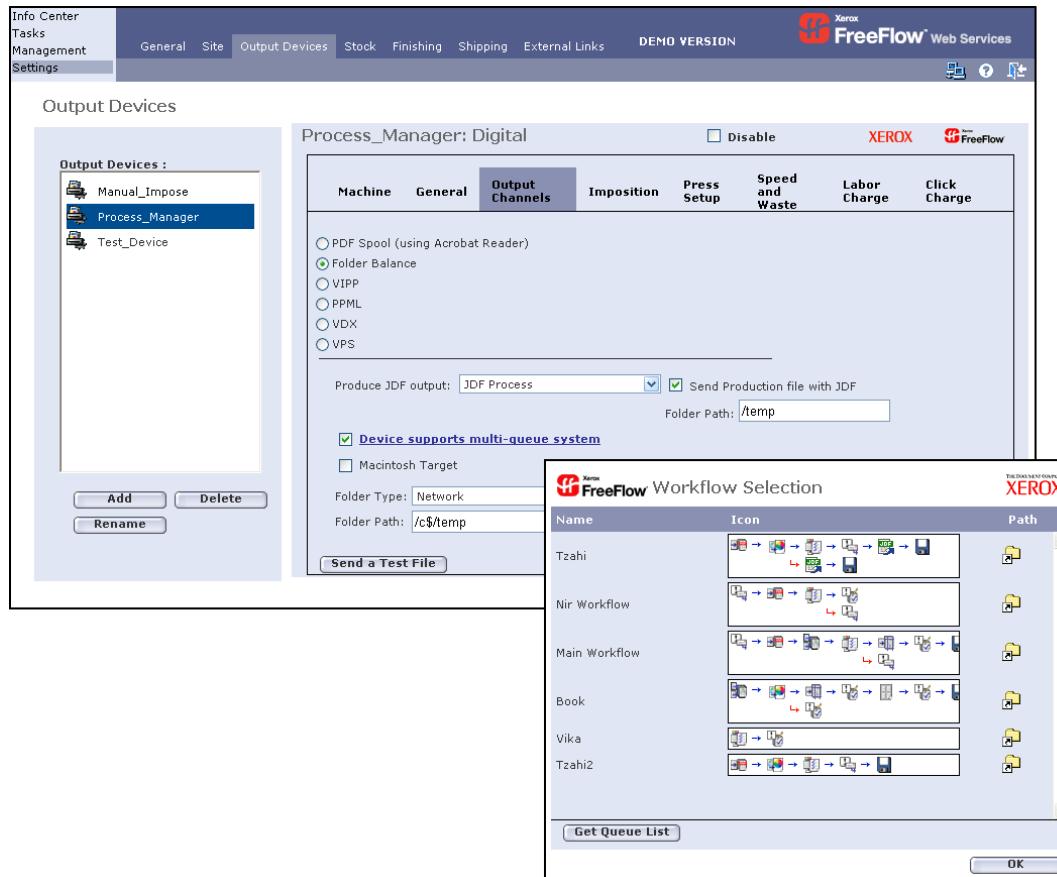

MSDE

FreeFlow WS5.0 uses the *Microsoft MSDE* as its default installation database.

MSDE (Microsoft SQL Server 2000 Desktop Engine) is a data engine built and based on core *SQL Server* technology. *MSDE* is a reliable storage engine and query processor designed for client applications that require an embedded database and Web sites serving numerous concurrent users.

Integrations with the FreeFlow System Components

Process Manager

FreeFlow WS5.0 allows the Print Provider to integrate the FreeFlow WS5.0 with the Xerox Process Manager.

The Process Manager Integration includes the following new features:

- Enabled Process Manager workflows, which will be automatically listed in the FreeFlow WS5.0 system. There will be no need for a manual setup.
- The JDF, passed over to Process Manager, contains a URL that can be launched by a dedicated button in Process Manager. The Process Manager operator can use this button to fire up the screen and feed back through it, into FreeFlow WS5.0.
- JMF Support – the JDF passed over to the Process manager contains a JMF tag that can be used by Process Manager to report a JMF status back into FreeFlow WS5.0.

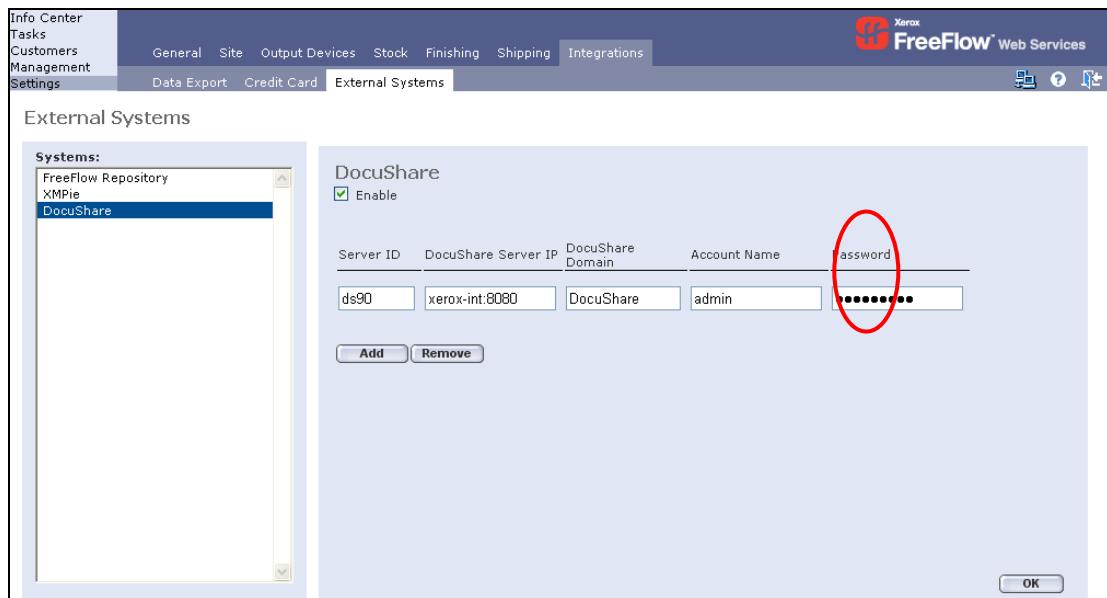

DocuShare

The *FreeFlow WS5.0* system now includes a workflow that allows documents to be printed from *DocuShare*. The *DocuShare* user selects a file and by clicking on the “Print with Web Services” button, a workflow similar to the “Print a document from my computer” workflow is initiated.

Note: This release will only support the uploading of one document per Job.

In order for this workflow to function, the *DocuShare* servers must be configured prior to printing. Administrators will be required to enter a unique *DocuShare* ID, the *DocuShare* server URL, a username that allows access to the file to be printed, and the associated password.

- Note:**
1. The *DocuShare* settings window is found in the *External Systems* window of the *External Links*.
 2. The Xerox *DocuShare NW_setup* is now carried out through the *Installer*.
 3. *Auto Login*, as displayed below, is not a part of the feature description, though it might be included in FFWS 6.0 in the future. For the present, this feature is to be ignored.

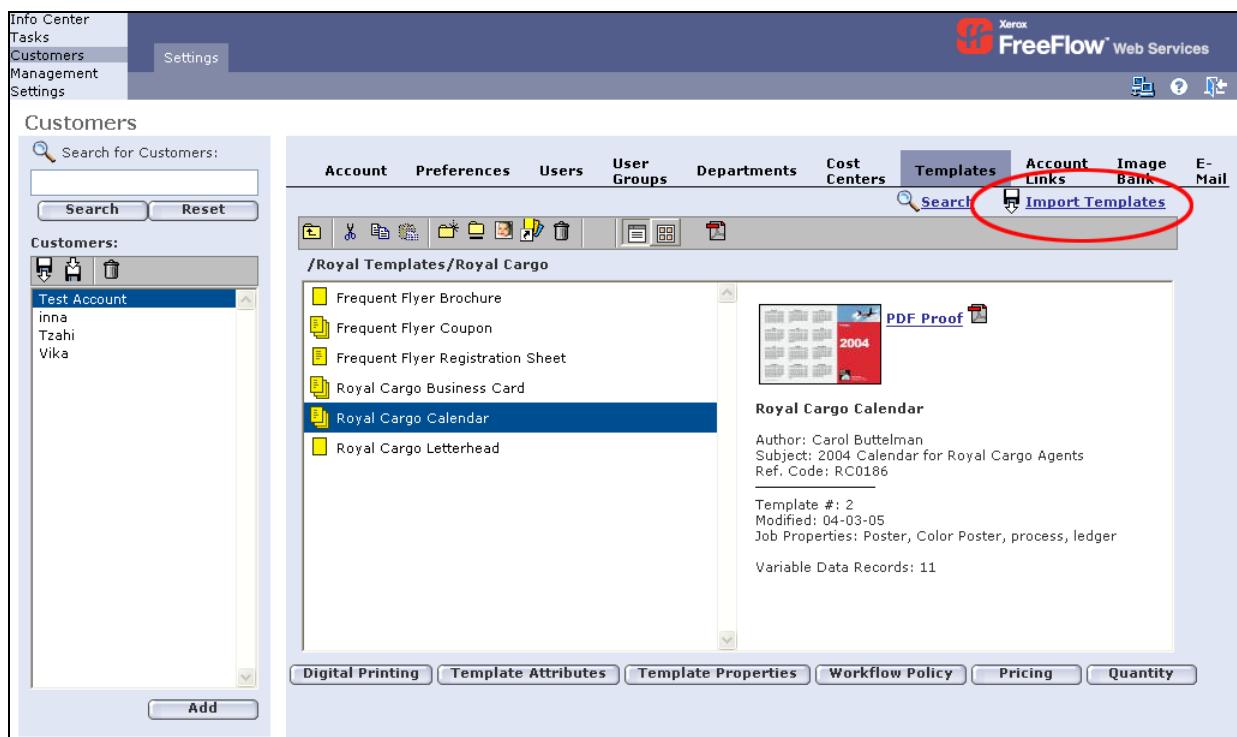

Repository

Note: Due to technical installation problems in the present *FreeFlow* software, at Xerox , the *Repository* feature has not yet been completed. Both Xerox and the FF Development Team are working to resolve this issue.

FreeFlow WS5.0 includes a Print Provider workflow for accessing catalog items from an external *Repository*, an external library that lodges catalog items (known as template items in *FreeFlow Web Services*). These catalog items can then be imported into the *FreeFlow* system.

Clicking on the *Import Templates* link in the *Customers/Settings/Templates* window accesses the *Import Template* wizard, which facilitates importing these catalog items. Once the catalog items have been imported into the Print Provider's system, these items can be made available to the Print Provider's customers.

Production Print

Note: Due to technical installation problems in the present *FreeFlow* software at *Xerox*, the *Production Print* feature has not yet been completed. Both *Xerox* and the FF Development Team are working to resolve this issue.

FreeFlow WS5.0 has been integrated with *Xerox's Quick Print* in order to facilitate production printing of Catalog Jobs.

Catalog Jobs that have been transferred to the Print Provider's *Approval* queue will display the *Catalog Job* icon. The operator has the following alternatives:

- Clicking on *Approve* sends the Job to the *FreeFlow Printing* queue.
- Clicking on *Re-Impose* enables selecting another printer among the Quick Print output devices.
- Clicking on *Print with QP* invokes the *Quick Print* system and sends the Job to the *Quick Print* printing queue

Benefits:

- Streamlines the workflow to *Xerox* output devices
- Maximizes the effectiveness of the *Xerox* output devices

Limitations

- 1** The Canadian tax calculation sheet, inside the Tax Excel file that resides under “...Newedition\IPanel\PricingModels\Excel\Tax”, must be changed in order to receive the tax values for Canada inside WS 5.0. Replace the Canadian provinces names with the acronyms as follows:

Province Name in Tax excel file	The acronym the should replace the Province name
Alberta	AB
British Columbia	BC
Manitoba	MB
Ontario	ON
Québec	QC
Newfoundland and Labrador	NL
Nova Scotia	NS
New Brunswick	NB
Northwest Territories	NT
Nunavut	NU
Prince Edward Island	PE
Saskatchewan	SK
Yukon	YT

- 2** Localized help files in Dutch, French, German, Italian, Japanese, Portuguese and Spanish will not be included when upgrading iWay Prime 2.5 to WS 5.0.
- 3** The online Shipping Method has been implemented only for FedEx, UPS and USPS in the USA only.
- 4** Excel files for shipping are provided by Press-sense to be used as examples only. Press-sense does not provide Excel files for any carrier, for reasons of liability.
