

## **11 Mailbox Communications**

---

Documents can be stored in mailbox locations on your machine, or a remote machine with compatible Mailbox Communication features. Remote machines can contact your Mailbox Station and poll the document.

Depending on the type of mailbox you choose, you can control the number of times your document can be polled, and by whom.

The WorkCentre provides two types of Mailbox Systems:

- **Xerox Mailbox** — A Xerox exclusive mailbox system compatible only with other Xerox WorkCentre compatible machines.
- **ITU-T Mailbox** — A mailbox system compatible with any other machine using ITU-T Standards and containing the mailbox features. ITU-T is an international fax industry standards organization.
