

## **Power Failure List**

---

The WorkCentre has a battery to back up the document data memory contents. However, when the power is turned off for a long time and the communication data stored in the memory is cleared, a list of the job numbers of those cleared communications is automatically printed.

The following information is printed on the Power Failure List for all Transmit and Receive, Polling, Mailbox, Receive to Memory, and Resend Stored Fax communications:

<b>Item</b>	<b>Description</b>
Job	Job number of the communication.
Type	Type of Communication (Continuous poll, Poll-once, Group poll, To be Polled Box, Bulletin Board, etc.).
Mail	Box number for a Mailbox communication.
From	Station where the communication occurred, or the Mailbox is input.
Date/Time	Date and time of input.
