

Tones

The WorkCentre generates tones to indicate the operational status of the machine.

- **Single short tone** — A confirmation tone. A short tone sounds when a key is pressed or when an action completes successfully.
- **Extended tone** — Signifies an unsuccessful operation. An extended tone (two to five seconds) occurs when a transaction does not complete normally. The user must perform an action to continue a process. Refer to the display messages in Chapter 13, “Troubleshooting” for the action to take.
