

1 Installing the Machine

Depending on where you purchased your Document WorkCentre the delivery company will install and set up your machine. If this service is not offered from where you purchased the machine, this chapter provides information on the system requirements and describes the steps you will need to follow to unpack and install machine.

System Requirements

When choosing an installation location, follow these guidelines:

- Avoid dusty locations, extreme heat, humidity, direct sunlight, or areas subject to heavy vibration.
- Avoid areas where interference from other electrical devices may be present.
- Avoid using an AC outlet that shares the same circuit as an electrical device, which may create interference.
- Locate the machine within reach of a telephone outlet. Use a dedicated single line telephone connection.
- Place the machine on a level surface. An uneven surface can cause performance problems such as poor copy quality and paper jams.
