

## **10 Polling**

---

### **Polling Communications**

---

The ***Polling*** function key allows you to poll a remote machine (Poll), set up a document to be polled by a remote machine (Be Polled), or poll multiple remote machines during the same operation (Group or Continuous Poll).

The Polling feature allows you to retrieve a document from a remote machine when you call that machine.

You can also transmit a document to a remote machine when the remote machine calls you.
