16   Safety and Legal Requirements

Your system and supplies have been designed and tested to meet strict safety requirements. These include safety agency examination and approval, and compliance to established environmental standards. Please read the following instructions and refer to them as needed to ensure the continued safe operation of your system.

Follow all warnings and instructions marked on, or supplied with, the product.

Unplug this system from the wall outlet before cleaning. Always use materials specifically designated for this system. Use of other materials may result in poor performance and could create a hazardous situation.

Do not use this system near water, wet locations, or outdoors.

Do not place this system on an unstable cart, stand, or table. The system may fall, causing personal injury or serious damage to the system.

This system is equipped with a 3-wire, grounding-type plug (i.e., a plug having a third grounding pin). This plug will only fit into a grounding-type power outlet. This is a safety feature. To avoid the risk of electric shock, contact your electrician to replace the receptacle if you are unable to insert the plug into the outlet. Never use a ground adapter plug to connect the system to a power source receptacle that lacks a ground connection terminal.

This system should be operated from the type of power source indicated on the marking label. If you are not sure of the type of power available, consult your local power company.

Do not allow anything to rest on the power cord. Do not locate the system where persons will step on the cord.

Use of an extension cord with this system is not recommended or authorized. Users should check building codes and insurance requirements if an extension cord is to be used. Ensure that the total of the ampere ratings of the products plugged into the extension cord does not exceed the extension cord ampere rating. Make sure that the total amperage of all products plugged into the wall outlet does not exceed the outlet rating.
