Photo Touch-up Software

Grow your business with better photo prints-automatically

Grow your photo finishing business with automated image-enhancement tools with the **Creo** Color Servers and your digital press. These tools employ sophisticated algorithms based on the latest developments in color and perceptual science. Photo Touch-up Software analyzes the content of images, then corrects and enhances them for optimal printing on your digital press.

With these tools, you can impress customers and build repeat business. Bring new life to scanned archival images—add impact and vibrancy to digital photos—fix typical errors—with no additional labor or processing time. Unlike other systems, these tools are intelligent—only correcting images that would benefit, and only affecting specific areas, or precise aspects that need improvement.

Print vibrant, impressive family calendars, photo books, postcards and more. Win more business from realtors and others who rely on photos for mailers and business cards.
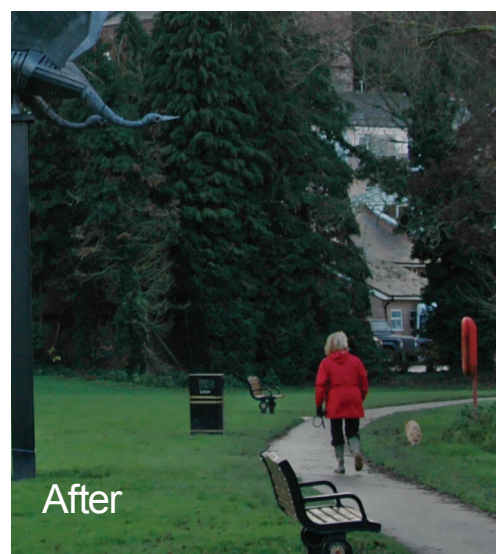

Just click the check-box

Using Photo Touch-up Software couldn't be simpler: just click the check-box to enable each tool. The system analyzes each image and adjusts only when necessary, while maintaining the image's intent and integrity.

Better photo prints—automatically

Sophisticated software algorithms in Photo Touch-up Software analyze the characteristics and content of each image, to intelligently apply the most effective image enhancement, and to fine-tune the images for reproduction on the digital press.
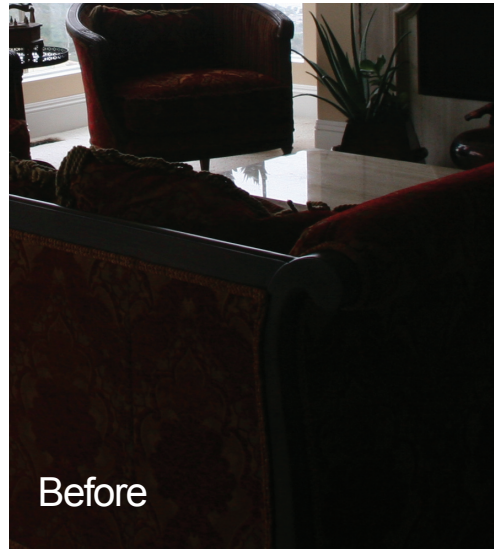

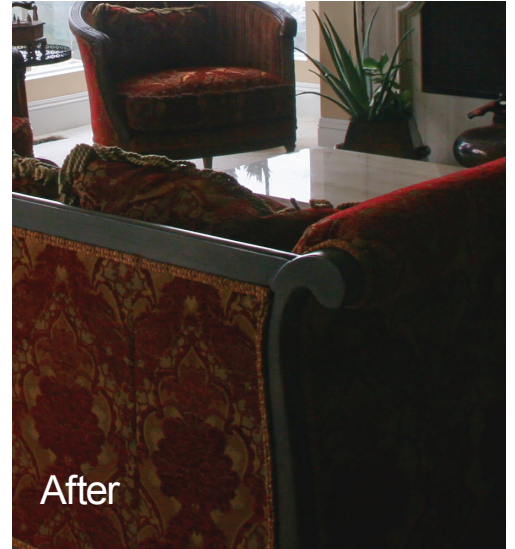

Scene Balance

Photo Touch-up Software analyzes and corrects underexposure, overexposure, and minor color-cast problems in photos.

Before

After

# Highlight and Shadow Recovery

Before

After

Photo Touch-up Software automatically brings out details in the dark and light areas of a photo.
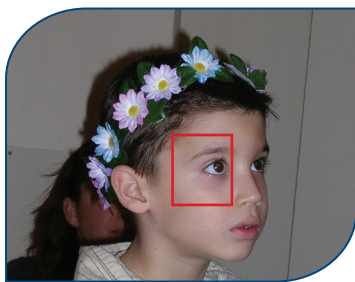

Noise Reduction

Before

After

Photo Touch-up Software reduces the noise, such as granularity caused by high ISO settings, in a photo.
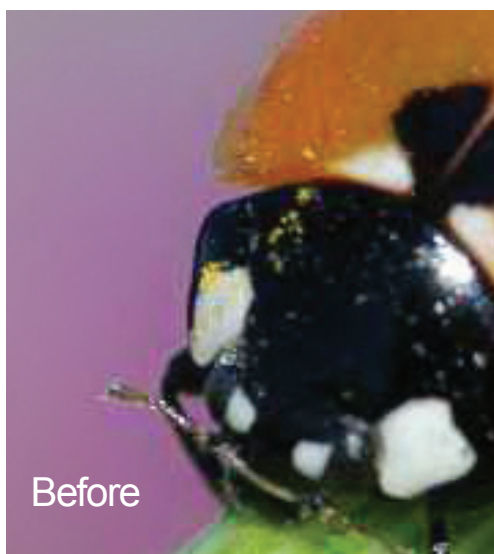

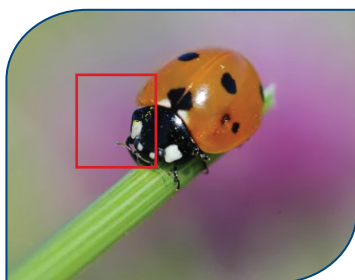

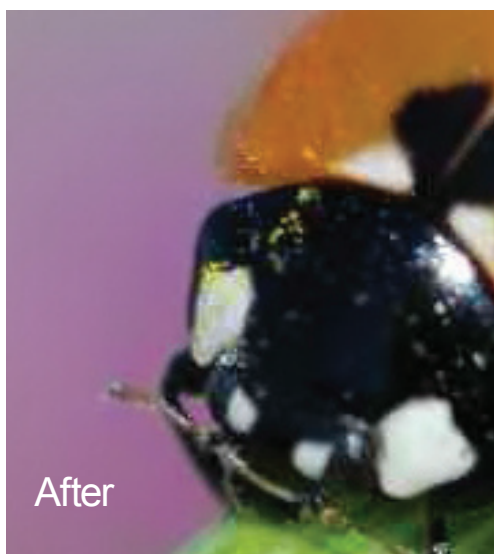

Red Eye Removal

Before

After

Photo Touch-up Software intelligently, and automatically, detects faces and eyes, and removes the camera-flash red-eye effect. No manual intervention is required, nothing except the eye's iris is affected.

JPEG De-Blocking

Before

After

Photographed by Uri Vered

Photo Touch-up Software removes JPEG artifacts often found in low-quality or highly compressed JPEG files. Particularly in gradient and vignette areas and around the edges of objects in a photo.
