1. Product Overview

The C.P. Bourg BDFx is a fully automated signature booklet maker, which produces high quality saddle stitched booklets in-line. The optional cover insertion module (BCFx) can feed preprinted cover stock up to 300 gsm excluding window cutouts (the BCFx is not available for iGen3).

The new Square Edge (SQEDG) Module option further expands its capability by offering an optional square edge spine.

The BDFx can top or corner stitch from 2 to 50 sheets and it can also be used in the fold only mode.

The Bourg Sheet Rotator (BSR) enables maximum small Booklet productivity on Xerox printers that are not equipped with an internal rotator. (Not shown.) The BSR is mandatory when the BDFx is installed with the iGen3® Digital Production Press.

Install Planning

Limitations

- The BDFx can only be guaranteed to work to its maximum book thickness when feeding (8.5 x 11 / A4) paper if the paperweight is 90 gsm or less. (Long grain paper with a weight above 90 gsm should be tested with the customer paper and application before selling the BDFx.)
- Use of short grain paper is highly recommended for 11 x 17" / A3 sized paper.

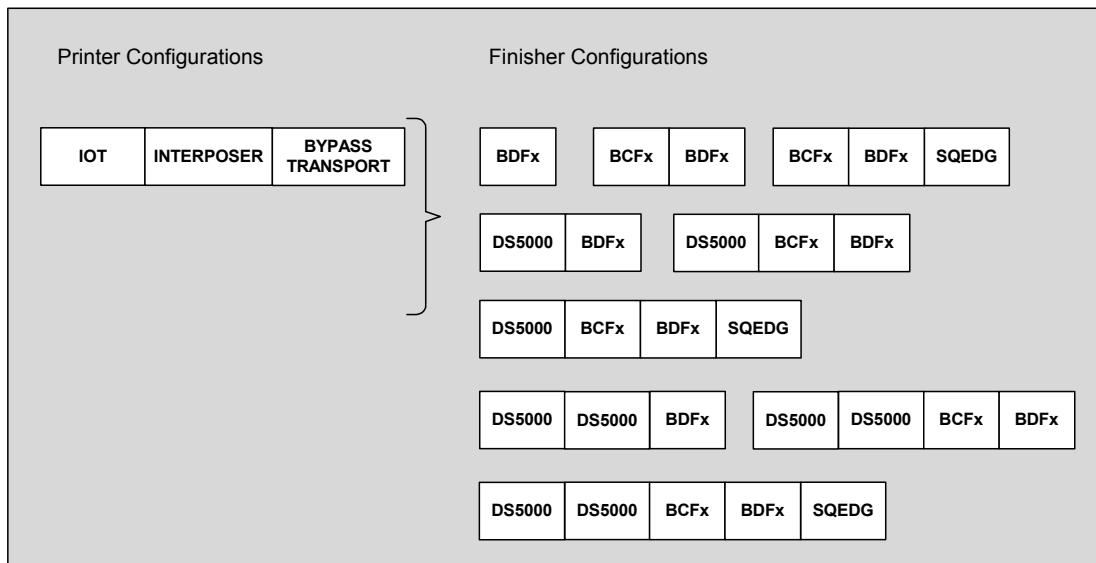

System Dependencies and Prerequisites

Listed below are the dependencies and prerequisites for installing the BDFx, BCFx and SQEDG module.

- The DT61xx must be equipped with a Bypass Transport to enable In-line Finishing.

Configuration Guide

The Configuration Guide contains diagrams over the various Finishing Solutions that are currently supported.

Productivity Guide

The calculated productivity for the BDFx is based on host machine running duplex job.

Limitations

- Due to the height of the bypass transport on DocuTech 1xx HLC it is not possible to attach the BCFx without the BSR.
- Requires a minimum of 2 skipped pitches (3 skipped pitches with BCF), which results in low productivity with small booklets. (A3/ 11 x 17 requires only one skipped pitch with or without the BCF.)
- The BDFx can only be guaranteed to work to its maximum book thickness when feeding (8.5 x 11 / A4) paper if the paperweight is 90 gsm or less. (Long grain paper with a weight above 90 gsm should be tested with the customer paper and application before selling the BDFx.)
- Use of short grain paper is highly recommended for 11 x 17" / A3 sized paper.

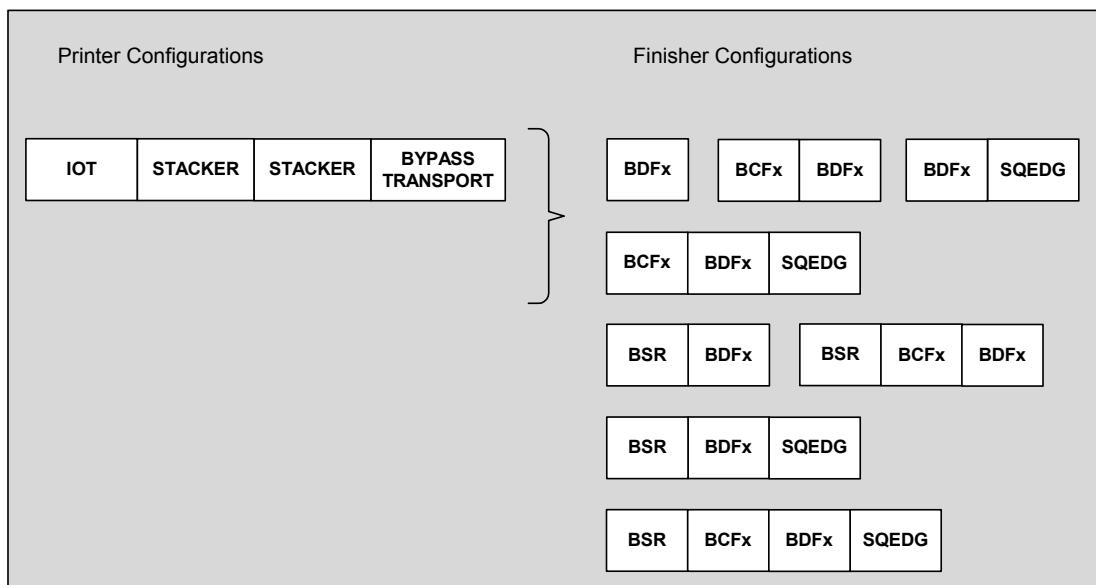

System Dependencies and Prerequisites

Listed below are the dependencies and prerequisites for installing the BDFx, BCFx and SQEDG module.

- The printer must be equipped with a Bypass Transport to enable In-line Finishing.
- It is highly recommended that the printer is equipped with a Bourg Sheet Rotator (BSR) to maximize output.

Rotating / Bypass	Specifications / Limitations
Paper Size (Rotating)	Maximum: 9" x 14" LEF (228 x 356 mm) Minimum: 8" x 10" LEF (203 x 254 mm)
Paper Size (Pass through)	Maximum: 14" x 18.5" SEF (356 x 470 mm) Minimum: 8" x 10" SEF (203 x 254 mm)
Paper Weight	16 lbs – 110 lbs (60 - 200 gsm)
Input Height	34" (860 mm)
Output Height	34" (860 mm)

Limitations

- Due to the height of the bypass transport on DocuPrint it is not possible to attach the BCFx without the BSR.
- Requires a minimum of 2 skipped pitches (3 skipped pitches with BCF), which results in low productivity with small booklets. (A3/ 11 x 17 requires only one skipped pitch with or without the BCF.)
- The BDFx can only be guaranteed to work to its maximum book thickness when feeding (8.5 x 11 / A4) paper if the paperweight is 90 gsm or less. (Long grain paper with a weight above 90 gsm should be tested with the customer paper and application before selling the BDFx.)
- Use of short grain paper is highly recommended for 11 x 17" / A3 sized paper.

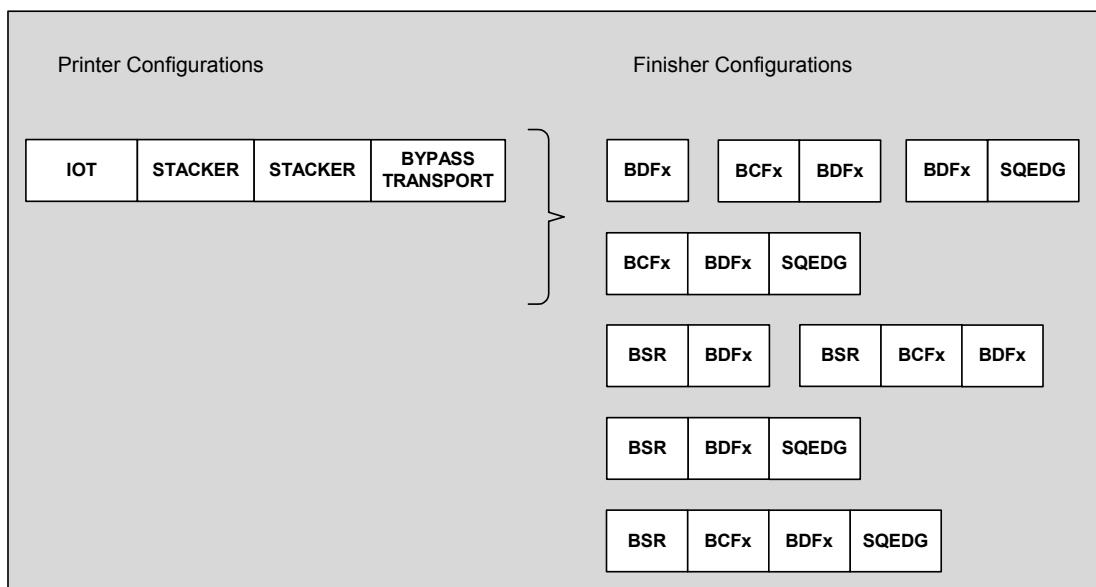

System Dependencies and Prerequisites

Listed below are the dependencies and prerequisites for installing the BDFx, BCFx and SQEDG module.

- The printer must be equipped with a Bypass Transport to enable In-line Finishing.
- It is highly recommended that the printer is equipped with a Bourg Sheet Rotator (BSR) to maximize output.
- Due to the height of the bypass transport on DocuPrint it is not possible to attach the BCFx without the BSR.
- Requires a minimum of 2 skipped pitches (3 skipped pitches with BCF), which results in low productivity with small booklets. (A3/ 11 x 17 requires only one skipped pitch with or without the BCF.)

- Use of short grain paper is highly recommended for 11 x 17" / A3 sized paper.
- The BCFx is not an available option together with the iGen3.
- The Cover Page of the booklet must be sent as the last page in the set.

System Dependencies and Prerequisites

- If installing a new Book Factory on an existing iGen3 installation, a Xerox iGen3 Finishing Interface kit (product code UYR) must be ordered.
- The BSR is mandatory when a BDFx is installed inline with iGen3. (The BSR is equipped with an enhanced static elimination transport (Tag 21) that greatly reduces static on papers delivered from the iGen3).
- Transition of an existing BSR to an iGen3 is not possible unless Tag 21 is already installed.

Limitations

- A Finisher Transport Module is required for in-line connectivity to the printer.
- A slight Cover Feeder feed mechanism adjustment may be necessary when changing cover weights (lightweight stocks may require a more precise adjustment).
- For 11" x 17" / A3 simplex single fold only documents, paper weight greater than 20 lb (80 gsm) are recommended.
- For 8.5" x 11" / A4 simplex single fold only documents, the **N-1 face up** orientation is required.
- Currently coated stock is not recommended.
- The BDFx can only be guaranteed to work to its maximum book thickness when feeding (8.5 x 11 / A4) paper if the paperweight is 90 gsm or less. (Long grain paper with a weight above 90 gsm should be tested with the customer paper and application before selling the BDFx.)
- Use of short grain paper is highly recommended for 11 x 17" / A3 sized paper.

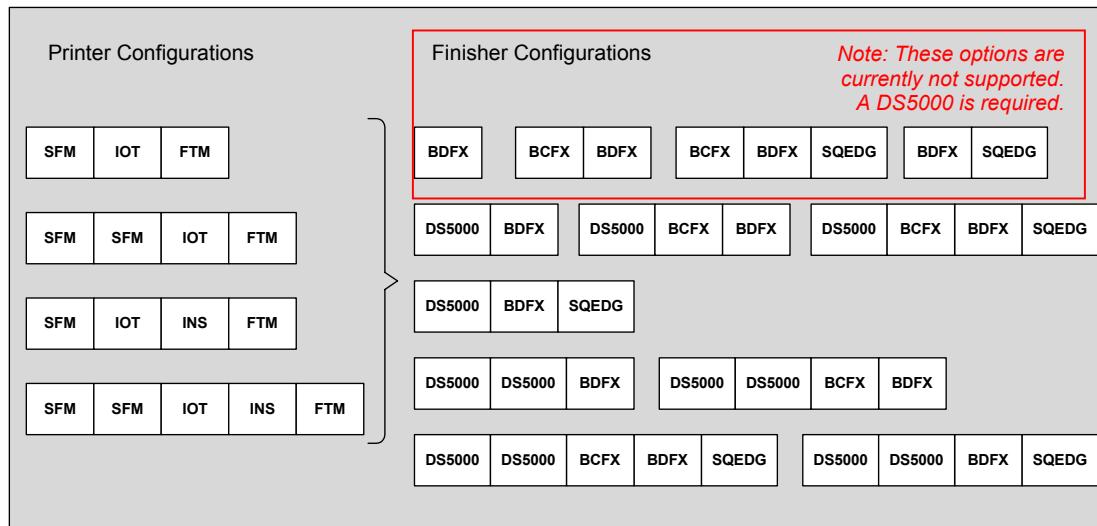

System Dependencies and Prerequisites

- The Finisher Transport Module is required for in-line connectivity to the printer.
- Currently, a Xerox Document Stacker 5000 must be installed in-line with the printer and the BDFx.
- If there is a transition of an existing BCFx to a Nuvera Digital Production System, an upgrade is needed.

Note: In case the floor at the customer site is very uneven, it is recommended that the Nuvera IOT is installed and leveled with a Caster Leveling Kit (kit number 498K07900).
