WHAT'S NEW

=====

- Xerox DocuShare Drive Outlook Integration lets you easily drag and drop email messages from Outlook to DocuShare collections for viewing and managing. The application supports managing DocuShare mail messages, documents, collections, and workspaces within Outlook.

SYSTEM REQUIREMENTS

=====

For the most current system requirements, visit the DocuShare website at <https://docushare.com/about/platform/docushare-drive/>.

- Microsoft Windows 7 with SP1 (32- and 64-bit), Microsoft Windows 8.1 (64-bit) or Microsoft Windows 10 (64-bit)
- Microsoft Office 2013, Microsoft Office 2016 or Microsoft Office 365 (fully installed)
- Microsoft Visual Studio 2008 C++ Redistributable SP1
- 1 GB RAM on 32-bit systems (2 GB recommended); 2 GB RAM on 64-bit systems (4 GB recommended)
- 10 MB free disk space for program files
- 100 MB free disk space for work and temporary data on 32-bit systems; 200 MB on 64-bit systems
- TCP/IP network connection to a DocuShare server running version 6.6.1 Update 3 Patch 2 or higher; or DocuShare 7 or higher

INSTALLATION

=====

Prerequisites

- If you are currently using Xerox DocuShare Client and its Outlook Integration feature, you must uninstall DocuShare Client.
- DocuShare Drive Outlook Integration requires pre-installation of DocuShare Drive 1.5.1 or higher. The Outlook Integration uses the DocuShare Drive libraries to obtain and manage network connections to DocuShare servers.
- You must be an administrator on the computer to install and remove DocuShare Drive Outlook Integration. Before you begin, make sure Outlook is closed.

Software Installation

- To install the software, run DSDOutlookIntegration_*_x86.msi if you are using a 32-bit edition of Outlook on a 32- or 64-bit operating system. Run DSDOutlookIntegration_*_x64.msi if you are using a 64-bit edition of Outlook on a 64-bit operating system. Office 365 installs a 32-bit version of Outlook on a 32- or 64-bit operating system. Use the 32-bit msi file with Office 365.
- If you want to install the software from a command line, run DSDOutlookIntegration_*.msi using the command line below.

```
msiexec /i DSDOutlookIntegration_<version-number>_<cpu-type>_<language-id>.msi
```

NOTES

=====

- While it is possible to have two versions of Microsoft Outlook (2013 and 2016) installed, DocuShare Drive Outlook Integration does not support this configuration and problems may occur. Remove the Outlook Integration feature, remove the older version of Outlook, and then re-install Outlook Integration.
- If you try to search for content other than mail messages and documents, an error code displays. Searching for other types of content is not supported.
- The maximum number of objects displayed per folder is approximately 8000.
