

Customer Release Notes

Phaser® 3250

System Software 1.70.02.41 General Release

Software Release Details

System Software	Version
Firmware Version	1.70.02.41

Important

See **“Xerox Phaser® 3250 Firmware Upgrade Instructions via CentreWare Internet Services (CWIS)”** for procedures on installing this firmware using the network.

See **“Xerox Phaser® 3250 Firmware Upgrade Instructions via USB”** for procedures on installing this firmware using the local machine USB port.

Purpose

This release addresses the following issues:

Security

- Update to SNMP security to address accessibility.
- Improved changes added on the Host Access List text boxes now allow IPv4 addresses to be entered. Also, multiple IP addresses can be entered separated by a comma (,), as well as use of wildcard (*) to enable a range of IP addresses to be entered.

Network

- In CentreWare Internet Services (CWIS), the “Printer Name” field has been expanded up to 255 characters in length, to allow for longer naming requirements.

Installation Instructions

The latest drivers and utilities along with this firmware can be downloaded from the Phaser 3250 Drivers and Downloads page at the web site: <http://www.support.xerox.com>. Type your product name “3250” in the search field then select the “Drivers & Downloads” link.

Note: To avoid compatibility issues, it is highly recommended to use the latest drivers and utilities with this firmware. If previous versions of drivers and utilities are used, some features may not operate correctly, such as Auto Configuration and the Status Monitor.
