

Instructions to Upgrade Controller Firmware

This release of firmware will upgrade the controller to version 1.15

This release:

Enables USTATUS features to support AS400 and Dazzle requirements.

Adds a PJJL command called XTRAYSIZE which when set to OFF will ignore driver request to print on specific size paper. The printer will format the print job for the paper size loaded in the specified tray. The default is on which formats to driver requested paper size and will ask for [age size to be loaded if size is not in any tray.

Installation:

Network Installation

Open a browser window to the printers IP address.

Click on the Print tab.

Select File down load and browse to the location where the flash file was saved.

Click the blue button to send.

See web support page for more details.
