Product Name	Fiery EX12 v. 2.0 SP2
Issue Date	March 29, 2005

Files included in this release	
File name	File size
1-GXV1X.hqx	1.29 Megabytes
1-GXV1X_relnotes.doc	44 Kilobytes

## Issue(s) addressed with this release

Unable to print with Printing Group from Mac OS X with Job Notes driver

## Steps to reproduce

1. Create a Group on the Fiery EX12 with just a Group Name and no password.
2. At the Mac OS X client, go to the Print Center and connect to the EX12 Hold queue.
3. Create a simple document with TextEdit or Quark.
4. Print to the printer with selecting the Fiery Job Notes and putting in your Group Name as you set it up in step 1.
5. Go to the CWS and do a Process and Hold and you will receive an error "Invalid Group Name/ Password".

This also happens when a password is set and if you are printing to the Print queue.

## Installation instructions

This release consists of updated client software and installer. To install this update:

1. Delete the current EX12 printer drivers and clean the system of all related files.
2. Re-install the printer by double-clicking the installer provided.

## Prerequisite(s)

None

## Known Issues

N.A.
