

# Release Note

General information	
Issue ID Number	1-N39QW
Product Name	Xerox EX3535 v1.0 EFIGS
Issue Date	April 11, 2006

Files included in this release	
File name	File size
Windows_User_SW.zip	1.12 Megabytes
1-N39QW_relnotes.doc	45 Kilobytes

## Issue(s) addressed with this release

PPD's release for x64 Windows XP

## Steps to reproduce

None.

## Prerequisite(s)

None.

## Installation instructions

### Windows Driver Update Information:

1. Unzip the "Windows\_User\_SW.zip" file that has been supplied with this release notes on to your desktop.
2. Install the driver from the "Windows\_User\_SW" folder using the Add Printer wizard. Please remember to point the installer to the location of the unzipped folder.

## Known Issues

### Fiery PPD for 64-bit Windows XP/Server 2003 printer driver

The PPD for the 64-bit version of Windows XP or Windows Server 2003 allows you to use the standard Windows printer driver to send jobs to the Fiery. You can access the PPD options when you print from an application by clicking Advanced in the Printer Properties window. The PPD options are available under Printer Features. Some print options are not available or are only partially functional, including:

- Tray Alignment
- Scale
- Group Name
- Group Password
- Description
- Notes

- Orientation
- Mixed Media Front or Back Cover
- FreeForm

Constraints between two or more settings are indicated with yellow warning icons, but you are not prevented from printing a job with settings that conflict.

Two-Way Communication is not available when using this PPD with the standard Windows printer driver. You must manually configure the printer driver with any installed options.
