Creo Spot Colors Plug-In for Acrobat

Version 1.1.1 Release Notes

Changes for Version 1.1.1 build #000

- Name is now Creo Spot Colors Plug-In for Acrobat
- Preferences now stored in Creo folder within Preferences folder

Changes for Version 1.1 build #014

- Compatible with Brisque 4.x and PS/M 7.x
- Name is now "Synapse Spot Colors Plug-In for Acrobat"

Known Problems with Spot Colors PI

- If the Spot Colors palette doesn't show any spot colors in the opened PDF file, probably the PDF doesn't include any spot color data. Check using another utility to confirm whether the PDF contains spot colors

- If you insert or delete pages to the PDF document after you have saved the spot color parameters in the PDF, you must open the document in Acrobat, display the Spot Colors palette, and again save the parameters before printing the document.
- The color swatches shown in the Spot Colors palette are only approximate representations.
- Colors inadvertently turned to Varnish - Spot colors marked as "Varnish" are automatically put at the bottom of the list. Then, when other colors are dragged to the bottom of the list they become Varnish colors also. In some cases this also applies to moving colors from the Convert To Process list to the main list, since they are added to the bottom of the list.
- Choosing "Close" from the Acrobat File menu may close the Spot Color palette, if it is open in Acrobat v4.0. Choose "close" a second time to close the document, or just close the palette manually first.
